ELECTRICITY

The Short Cut To Big-Pay

Electrical Experts Earn $3,500 to $10,000 a Year

Be a Big-Pay Man

The "short-cut" to "Big-Pay" is training. The big field of today for the trained man is Electricity. Trained "Electrical Experts" earn $70.00 to $200.00 a week.

Why Work for Less?

Why work for $25.00 or $30.00 or $40.00 a week? With a few months training under me, through my easily learned, quickly-grasped, right-up-to the-minute, spare-time, Home-Study Course in Practical Electricity you can fit yourself for one of the bigger jobs—one of these jobs that pay $3,500 to $10,000 a year.

I Give You A Real Training

As Chief Engineer of the Chicago Engineering Works, I know just the kind of training you need to succeed as an Electrical Expert. My course in Electricity is so simple, thorough and up-to-date that you can easily understand and apply every line of it—no big words, no useless theory, no higher mathematics—just plain, every-day, straight-from-the-shoulder, man-to-man English—the kind you and I use every day.

Your Success Guaranteed

My course is backed by an iron-clad guarantee that insures your success and satisfaction. I positively will refund every cent paid me in tuition if you are not fully satisfied. No other school will do this for you. Back of me in my guarantee stands the Chicago Engineering Works, a Million Dollar Institution.

Free Electrical Working Outfit

To make your success certain I give you tools to work with—a splendid big outfit of electrical instruments and materials. No chance for failure here!

Save $45.50 By Enrolling Now

By enrolling now you can save $45.50 on the regular low price of my course. But you must act at once. Write me today, for my Big Free Book, "How To Become An Electrical Expert." It's the first step towards bigger pay.

Yours for success,

L. L. COOKE, CHIEF ENGINEER

THE COOKE TRAINED MAN IS THE "BIG-PAY MAN"

IVER JOHNSON BICYCLES

Why pay carfare?

Ride to and from work on an Iver Johnson Bicycle. You'll feel better, sleep better, work better, and save money.

The Iver Johnson Bicycle is built with truss-bridge frame; seamless tubing of high carbon nickel steel; drop-forged parts; two-piece crank set; and new "Two-point" ball-bearing construction, both cones on one axle, always in alignment. Every bicycle guaranteed satisfactory.

The Iver Johnson Truss-Bridge Roadster Bicycle, as well as all our other models, represents splendid value at the price.

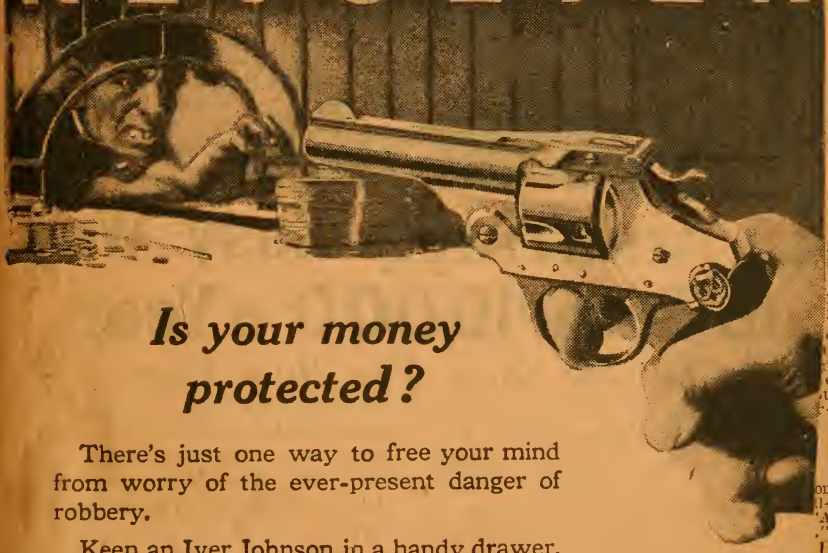
Iver Johnson Champion Single and Double Barrel Shotguns combine accuracy and dependability, and are moderately priced.

IVER JOHNSON'S ARMS & CYCLE WORKS
345 River Street, Fitchburg, Mass.
99 Chambers St., New York 717 Market St., San Francisco

IVER JOHNSON

SAFETY AUTOMATIC

REVOLVER



Is your money protected?

There's just one way to free your mind from worry of the ever-present danger of robbery.

Keep an Iver Johnson in a handy drawer. It's absolutely accident-proof. Jolt it, thump it, bump it, or "Hammer the Hammer." Only by the intentional pull of the trigger can this revolver be discharged.

Because of its piano-wire heat-treated springs—instead of ordinary flat springs, which often break—the Iver Johnson is ever ready to respond with lightning quickness to a pull of the trigger. Accurate, penetrating, sure in action.

All calibres in hammer and hammerless models. Regular, Perfect Rubber, and Western Walnut grips. If your dealer hasn't in stock the particular model you want, write us.

Three interesting booklets full of information, FREE. Write today for the one that interests you.

An Amazingly Easy Way to Earn $10,000 a Year

Let Me Show You How Free

TO the average man the $10,000 a year job is only a dream. Yet today there are a surprising mber of men earning five figure laries who were merely dreaming of em a short while ago. The secret their success should prove a start- g revelation to every ambitious man 10 has ever aspired to get into the 0,000 a year class.

There is nothing fundamentally ifferent" about the man whose ary runs into five figures. He is de of the same stuff as you and I. s not necessary that he must enjoy privilege of some influential con- tion or "pull." For example take P. Overstreet of Denison, Texas. A short years ago he was a police icer earning less than $1,000 a r. Today his earnings are n ex- s of $1,000 a month—more than ,000 a year. C. W. Campbell, ensburg, Pa., was formerly a road employee on a small salary ist month his earnings were $1,562. rles L. Berry had been a farm- d until a sunstroke forced him to . Then, in one month he made)00.

Just stop a moment and think over the successful men of your acquaintance. How many of them are connected with some form of selling?

Why Salesmen Earn Such Big Pay

If you will study any business organization you will see that the big jobs go to the men who sell, for upon their efforts depend the profits a company makes. Without trained men to place a product on the market, the finest goods are worth no more than so much clay. Salesmen are the very nerve centers of a business. Is it any wonder that they earn big pay?

The man who starts working as a bookkeeper or clerk for $25.00 a week never increases his value to the firm. Any advance in pay is merely a reward for length of service. At the end of ten years he is no more essential to the life of the organization than he was at the end of ten weeks. He is only a necessary liability—drawing his pay because somebody must be found to work at the unimportant, routine jobs. Once established n the rut, he become a cog in the machine —when he is worn out he can be easily and cheaply replaced.

Mr. Overstreet, Mr. Campbell and the others whose letters you see on this page are all successful salesmen. They realized their ambitions by landing $10,000 jobs in an amazingly simple way, with the help and guidance of the National Salesmen's Training Association. Sometime—somewhere back in the past, each one of them read of this remarkable course of salesmanship Training and Employment Service just as you are reading of it today. Each one of them was dissatisfied with his earning capacity—as perhaps you are—and each one cast his lot with the N. S. T. A. Today they are important factors in the business world—enjoying all the comforts and luxuries money can buy. And yet they are not exceptions, for there are thousands of N. S. T. A. trained salesmen who are making big money, as we will be only too glad to show you if you will mail the coupon.

We Train You and Help You Land a Job.

The National Salesmen's Training Association is an organization of top-notch salesmen and sales managers formed for the express purpose of training men in the science of successful selling. You do not need to know the first thing about selling—for the N. S. T. A. trains you from the ground up—gives you a complete insight into selling methods—in your spare time without making it necessary to give up your present position until you are ready to begin actual selling.

In addition to this remarkably efficient course of training, the N. S. T. A. maintains a Free Employment Service to help its Members to jobs in the lines for which they are best suited. This in itself is of incalculable value, for it allows the prospective salesman to make a complete survey of the selling field and to select the work which most appeals to him.

Salesmen Are Needed—Now!

Get out of that rut! Work for yourself! Salesmanship is the biggest paid of all professions. Just because you have never sold anything is no sign that you can't. We have made Star Salesmen of men from all walks of life, with no previous selling experience. These men have jumped from small pay jobs to big selling positions and handsome incomes. The same training on which they founded their success is open to you. You can follow in their footsteps. Why don't you get in a class with men who make real money? Never before have the opportunities been greater. At least you cannot afford not to investigate the great field of Selling and see what it offers you. It will only cost you a 2 cent stamp and the facts and proof you will receive will surprise you

Read These Amazing Stories of Success

Earned $524 in Two Weeks

I have never earned more than $60 a month. Last week I cleared $306 and this week $218. You have done wonders for me.—Geo. W. Kearns, 107 W. Park Place, Oklahoma City, Okla.

I Now Earn as High as $100 a Day

I took your course two years ago. Was earning $15 a week clerking. Am now selling many of the largest firms in the U. S. I have earned more than $100 in a day. You secured me my position. Our Sales Manager is a graduate of yours.—J. L. DeBonis, 4615 Warwick Ave., Chicago, Ill.

Earns $1,562 in Thirty Days

My earnings for the past thirty days are $1,562, and I won Second Prize in March although I only worked two weeks during that month.—C. W. Campbell, Greensburg, Pa.

Earned $1,800 in Six Weeks

My earnings for March were over $1,000 and over $1,800 for the last six weeks, while last week my earnings were $365. I travel eleven months out of the year, working five days each week.

The N. S. T. A. dug me out of a rut where I was earning less than $1,000 a year and showed me how to make a success.—J. P. Overstreet, Denison, Texas.

$1000.00 FOR A SINGLE DRAWING

Think of it! Leading illustrators and commercial artists are frequently paid $250, $500, $1,000 and more for single illustrations or designs—and their work is eagerly sought.

Everyone may not achieve such remarkable success—but the opportunities before you now in this splendid profession have never been excelled. Commercial artists—both men and women—who have developed their ability through proper training readily earn $50, $75, $100, $150 a week and up.

Millions Paid Yearly for Commercial Art

The demand for high-class commercial art is growing by leaps and bounds. Thousands of advertisers, periodicals and publishers buy millions of dollars' worth of designs and illustrations every year. Good commercial art is vital to modern business—and artists who can produce it earn extraordinary incomes.

Develop a High-Salaried Ability Through Federal Training

If you like to draw, learn in your spare time through the Federal home-study method—a proven result-getter by the success of hundreds of Federal students. The course is fascinating, easy to learn and apply, and endorsed by leading illustrating companies, designers and commercial artists as America's Foremost Course in Commercial Designing.

Send Today for "Your Future"

a 56-page book beautifully illustrated in colors, showing remarkable work by Federal Students, telling of their successes, and of opportunities in this field that will open your eyes. Why hesitate? If you would succeed, every day, every hour is precious to you. Get this book—send the coupon NOW without obligating yourself in any way.

It Pays to Read

LAW

THE READING OF LAW has brought swift, sure success to thousands of men who without the benefit of this specialized knowledge would probably never have progressed beyond ordinary achievement. A practical working knowledge of LAW is a short cut to personal power in every walk of life.

LAW is a factor of prime importance in every business.. To-day's conditions, involving a mass of statutes, decisions,- rulings—changes from old precedents—new interpretations of commercial law—all make the legal expert of vital importance, a positive necessity in every large business house. Never before were prospects so bright for men who can answer the puzzling legal questions which come up daily in business. Important positions carrying executive responsibilities with large salaries are always seeking legal experts.

LAW training often leads to a big executive position, because it enables a man to dictate policies that are legally sound—to make quick, correct decisions on intricate points, puzzling to the untrained man. Every large corporation has a well equipped legal department, and smaller concerns have their retained legal advisers. The presidents of many corporations (for example: Pullman Co., American Sugar Refining Co., National Biscuit Co., etc.) are law-trained men.

LAW is a stepping stone to personal prestige and social standing. The successful practising lawyer, or law-equipped business man, has open to him a prosperous career in a dignified, influential profession. No other profession opens up greater opportunities for rapid and profitable advancement. And never before has it been so easy to acquire a thoro law training of university grade as now.

University Course by Mail

LaSalle Extension University's faculty of legal experts will train you thoroly in every phase of law. You will get instruction in the same subjects taught at leading resident universities. You will have text books, lectures, quizzes, illustrative cases, examinations, etc., prepared by leading law professors. You will be directed at every step, with every point clearly explained. Graduate with a degree of LL. B. All this training can be had at home—in spare time only. No need to leave your present position. Membership also includes general consulting privileges with all departments of the university—a service not offered by any other institution.

Convenient Tuition Terms

The LaSalle course and this direct personal instruction and business consulting service is offered at a cost within reach of even the man of small income. Decide now to be a law-trained man. Get above the ranks where the pay is small and competition intense—increase your income by increasing your mental capacity.

WRITE—Just mail the coupon and we will send full information about the LaSalle Home Study Course in Law and about our Free Consulting Service. We will also send you a copy of our famous book, "Ten Years' Promotion in One"—which tells how men with the aid of LaSalle training have gained in one year promotion which men without this training have not realized in ten. Send for your copy now.

Ever Get Fired?

Every newspaper in the country is full of stories about men being thrown out of work. We are facing a period of depression which many say will lead to "soup kitchens and bread lines." Already in New York State 125,000 people are idle. "At the present rate," says the Daily News Record, "there will soon be two workers for each job."

Tens of Thousands Out of Work—More Being Laid Off Daily

Now is the time to get a job that hard times don't affect—working for Uncle Sam in any of the numerous branches of the Civil Service. According to Federal Law you cannot be fired or laid off for any reason.

Let Me Train You for a Job With Uncle Sam

You must pass a Civil Service Examination before you are accepted. There are certain things you MUST know. It is my business to PREPARE you for the examination so you can pass successfully. Even college graduates fail in these examinations because they do not know how to answer the particular kind of questions asked by the Government. For eight years I was a Civil Service Secretary-Examiner, so I am perhaps the best qualified man in the country to coach you. I GUARANTEE to coach you until you succeed in GETTING A POSITION.

$1,600 to $2,300 a Year

AND YOU GET IT

No Strikes — No Layoffs — No Lockouts.

Positions in the Government service pay as high as $3,000 to $10,000 a year! Hours are easy—eight or less a day. Vacation every year with full pay, work at home or travel, or work in Washington or at Panama Canal.

Get My Free Book

If you are an American citizen 18 years old or more you are eligible to a Government Civil Service Position. If you have a common ordinary 4th grade education as a foundation I want you to have a copy of my splendid fully illustrated book, telling you how to secure it. Send in the coupon to-day or just a postal card. Find out now just how I can help you to land a steady, good-paying position with the U. S. Government, in the Railway Mail, Post Office, Rural Carrier, Departmental, Internal Revenue, Immigration, Custom House or Postmaster Services. Mail the coupon or a postal to-day. Address:

You use Michelin Ring Shaped Tubes

—and know they are best

Try Michelin Cords

—they are just as good

Michelin Tire Company, Milltown, N. J.

At thirty-three he was the head of a promising little business of his own.

At thirty-five he was back again at a job: a cog in a big machine.

Will you be one of the 38.2%?

FIVE years ago a man of thirty took his savings, and the savings of some of his friends, and embarked in business for himself. He was honest, industrious and attractive; there seemed to be every reason why he should succeed.

To-day, at thirty-five, he is filling a departmental position in a big concern—a position no better than the one he left five years ago.

What happened to his business that promised so much? Fraud? No. Lack of capital? Not primarily. Neglect? Not at all.

The trouble was with the training of the man. *He was an expert salesman, but he knew absolutely nothing of the other phases of business.*

The Failures the Institute Could Prevent

He could sell goods but he was wholly ignorant of factory and office organization and control. Costs and accounting were a foreign language to him; transportation, advertising, corporation finance—he made mistakes in every one of them, and each mistake cost him money.

He belonged to the 38.2% of business failures whom Bradstreet groups under the tragic head, "Incompetence."

It is these failures—and those due from "inexperience" and lack of capital (which is merely another word for bad judgment)—that the Alexander Hamilton Institute can prevent.

For its Modern Business Course and Service is designed to round out a man, not to make him a better specialist in the single department he already knows but to give him a working knowledge of all other departments.

Canadian address, C. P. R. Bldg., Toronto;

Copyright, 1921,

Here Are the Reasons Why Men Fail

As Reported by Bradstreet

Cause	
*Incompetence	38.2%
*Inexperience	5.6
*Lack of Capital	30.3
*Unwise Credits	1.3
*Fraud	7.0
Failures of others	1.7
Extravagance	1.1
Neglect	1.7
Competition	1.1
Specific conditions	11.3
Speculation	.7
Total	100.0%

*These are the needless failures that a well rounded business training would prevent.

Lack of training in the fundamentals which underlie all business makes men **incompetent**; leaves them ignorant of the experience of others; rates them as poor risks for **capital**; blinds them to the ordinary safeguards of credit extension; and exposes them to all the frauds which prey on business ignorance.

That is why so large a proportion of the thousands of Institute men have stepped from mere positions into businesses of their own and have achieved unusual success.

Will you work all your life in a routine job?

You may never have thought of it in this way, but you are paying for the training of the Alexander Hamilton Institute whether you accept it or not.

If you do accept it, the cost is a little investment in money and time. But who can figure what the cost of indecision and delay may be?

Suppose to-morrow an opportunity comes in your present organization for a trained and self-confident man to step up into the class of executives? Or suppose some day you, with your savings and experience, start a business of your own.

Most men look forward to such a day—the day they will be made executives or go into business for themselves. It is the beginning of real independence. Will you be equipped when that day comes?

"Forging Ahead in Business"

The Institute has helped thousands of men to shorten their path to independence. It makes no special argument; it asks only for an opportunity to lay the full facts before thoughtful men for their consideration and decision. The facts are gathered into a book of 120 pages entitled "Forging Ahead in Business."

It explains the Modern Business Course and Service in full, and tells just what it has done for other men in positions similar to yours. Any thoughtful man may have a copy by mail on request, and without obligation. For your convenience we attach a coupon and suggest that you fill it in now.

The Winner of the World's First Prize for Best Course in

Penmanship

extends to the public an opportunity to secure the result of 20 years' service as one of the world's leading penmen, in a masterful series of

LESSONS BY CORRESPONDENCE

Under His Personal Direction

The Ransomerian System of Penmanship was awarded the first prize for best course of lessons in a contest open to the world. It has been adopted as a standard by boards of education, teachers and penmen throughout the country. Many of the ablest teachers of penmanship in America are products of Ransomerian training. Those who are graduated under Mr. Ransom's direction are eagerly sought and are being placed in the highest positions as instructors in America's leading educational institutions, and as supervisors of penmanship in cities and towns in many parts of the country. His correspondence course was compiled from copies and instructions used in the contest in which he won the championship of the world, and represents the height of perfection in both copies and instruction.

The Champion Prize Winning Penman of the World, nationally known educator, author of Ransomerian System of Penmanship and Champion Prize Course of the World.

Let This Great Teacher and Penman Train You

by Mail to Write a Master Hand

The ability of Mr. Ransom as a teacher has been proven by results produced for more than 20,000 students. He is a penmanship teacher of the highest magnitude. The natural ability, the untiring energy, the lightning action of brain and muscle, are evident in the almost superhuman skill displayed in the execution of copies for his lessons, and when coupled with his vast experience, his enthusiasm and his confidence, carry such conviction to his students by thousands that they accomplish seemingly impossible results in record breaking time. He is a leader who leads from the first instant—whose very name signals success in penmanship. When you place yourself under the direction of his master hand you are sounding the knell that pronounces inevitable destruction to that shaky, illegible hand-writing.

A letter, a postal or the coupon will bring you an envelope superscription in Ransomerian Ornamental Penmanship, a Ransomerian Favorite Pen, and a copy of the Ransomerian Journal Free. Write today.

More Earning Power on the Farm

When you buy a farm implement, you buy earning power.

The value of the implement to you depends upon its ability to earn profits for you by increasing your yields per acre and decreasing your cost of production.

The vital factor to consider when you choose an implement is how much it will earn over and above other implements.

John Deere farm implements, products of 84 years of manufacturing experience, have an established reputation for doing unusually good work for an unusually long time.

That's the kind of earning power that insures the greatest final returns on the investment.

There is a John Deere implement for practically every farming operation.

Write for free folders describing the implements in which you are interested. *Address Department A.*

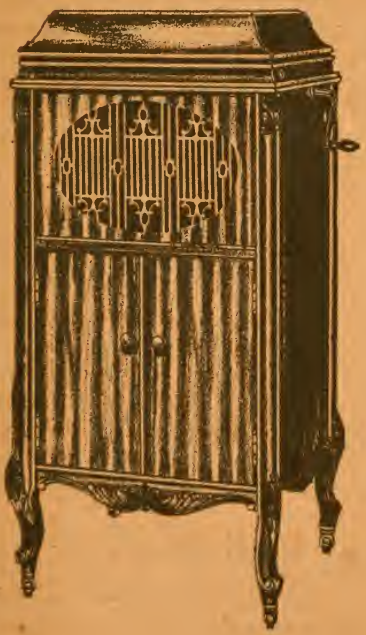
Hear The Brunswick—Then Compare

Have a Brunswick dealer play your favorite pieces.

You'll appreciate instantly the superior tone, and then any comparison will prove conclusively that The Brunswick brings the finest tone quality obtainable. Overshadings of tone, too delicate for recording by old methods, are faithfully transmitted by the Brunswick Method of Reproduction.

Two exclusive features make this possible. The Ultona—an all-record reproducer—plays all records with no more adjustment than a turn of the wrist to bring the proper needle into playing position.



And the Tone Amplifier—an all-wood tone chamber—eliminates any suggestion of the metallic harshness or stridency noticeable in some instruments.

Hear The Brunswick. Hear the others. Then decide.

I EARNED BIG MONEY

This is

Richard A. Oldham

Mr. Oldham was telegraph operator for the Illinois Central Railroad for twenty years. He is fifty-eight years old. One day he read one of my advertisements and the possibilities of making money in the Auto Tire Repair Business. In a few weeks he had purchased and installed a Haywood outfit, and was doing business for himself. A short time ago he wrote us that his income in four months was as much as it had been in Two and One-Half years as Telegraph Operator. There are **thirty million** tires in use every day—punctures and blow-outs are common. Something going wrong all the time. New tires advancing to prohibitive prices. Owners forced to have their old tires fixed. I have 500 other places to be filled now.

I Must Have 500 Men

to fill these places within the next 60 days

I have a big interesting book to send you—a book about tires—it tells all about them—how they are repaired by the Haywood method—explains this business—gives inside figures and profit. Gives actual proof of success. What these men have done you can do. $2500 to $4000 a year is conservative. One machine will give you a start. All you do is open a shop, put out a Haywood sign, and auto owners will come to you. There is a big opportunity awaiting you.

Sign the Coupon and mail it today. or send a post card or letter.

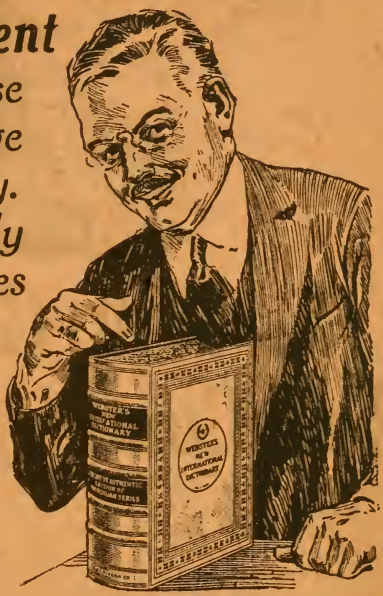
Effective Work Demands

Modern Equipment

Success is for those who take advantage of every opportunity. Notice how frequently the man of affairs uses

Webster's New International Dictionary—



a whole library in one book, the product of master minds, clear, accurate, compact, authentic. You will find this **"Supreme Authority"** in his study, at his club, in his office. It is on the table of his lawyer, his architect, in the editorial room of his daily paper, in the schoolroom of his children. Universally used by young and old in their work and play to answer questions of **what, why, how,** about words, people, places

400,000 Words defined, including New Words and World War Terms.
30,000 Geographical Subjects.
12,000 Biographical Entries.
6,000 Illustrations.
2,700 Pages.
100 Valuable Tables of Coins, Weights, etc.

If hundreds of thousands of successful men and women know and use this foundation book, WHY NOT YOU?

A recent purchaser says: **"The New International has enabled me to do two things, save time and build knowledge, and time is money and knowledge is power. The ability to talk and to write effectively spells success."**

The ONLY Dictionary with the new divided page. Type matter is equivalent to that of a 15-volume encyclopedia.

REGULAR and INDIA-PAPER EDITIONS

This Man Is Acclaimed by Thankful Thousands!

Let Him Help YOU as He Has Helped Others!

He Will Give You a Real Command of English

Your use of English proclaims you to the world. What you say tells what you are. Your language largely determines your place among successful men. The greater your vocabulary the greater your power of expression and your influence upon your fellow men.
Commence now—let Grenville Kleiser teach you through his Mail Course in Practical English and Mental Efficiency.

He Will Show You How To—

Enlarge Your Stock of Words—
Use the Right Word in the Right Place—
Write Tactful, Forceful Letters, Advertisements, Stories, Sermons, etc.—
Become an Engaging Conversationalist—
Enter Good Society—
Be a Man of Culture, Power and Influence in Your Community.

Language Is Power

A mastery of it means greater efficiency, broader opportunities, increased income. It will give you a supreme command of this indispensable factor toward worldly success.

Your thinking is done in words. It is impossible for you to think in words which you do not possess. Your thoughts must suffer for the words you lack. Increase your stock of words and you increase both your facility of expression and mental efficiency. One vital difference between a clear thinker and a hazy thinker, between one who is authoritative and persuasive and one who is feeble and unconvincing, is largely a matter of words and verbal skill. A limited vocabulary means limited thought, limited power, and limited authority.

Grenville Kleiser's system is altogether different from old-time methods. There are no wearisome rules of syntax and rhetoric to memorize. By a direct, intensely interesting and practical system immediate results are guaranteed.

His Course Will Awaken and Develop Latent Powers and Ambitions

It not only gives one that command of words and knowledge of men and things which tends to leadership, but it will shape your life mentally and physically by a thousand influences. It will inspire and develop latent qualities of concentration, will power, personal magnetism, and build up a personality which will command recognition and advancement.

It will take only some of your spare moments at home; no repellent study; each lesson as clear as daylight and inspiring to the highest degree. The average man of to-day can add largely to his efficiency, influence, and income if he will give a few minutes each day to Grenville Kleiser's fascinating Mail Course in Practical English and Mental Efficiency. Many thousands have done so. You can too.

WHAT OTHERS SAY:

BOOTH TARKINGTON

Distinguished Novelist and Short-Story Writer, Author of "Monsieur Beaucaire," "Seventeen," etc.:

"Your course is almost painfully needed by many professional writers and speakers. A student who intelligently follows your course will know what he is talking about when he talks or when he writes. His audience will certainly know, because he will talk well, no matter what his subject."

ELLIS PARKER BUTLER

Popular Humorist and Short-Story Writer, Author of "Pigs is Pigs," etc.

"A good idea excellently worked out. Supplies what nine out of ten men and women need before they put pen to paper or open mouth before an audience. I should especially recommend it to college graduates and oth rs who have been stuffed with petrified English and turned loose with no knowledge of working English."

THE LATE JOHN BURROUGHS

Famous Naturalist and Writer:

"I see valuable and helpful hints in these lessons. Any young man or woman who has an undeveloped literary talent ought to profit greatly by this course."

RUPERT HUGHES

Noted Novelist and Dramatist, Author of "Excuse Me," etc.

"You have provided an effective and sufficient course of lessons in the mechanism and the art of writing English. I congratulate you on your achievement, and I congratulate those who are fortunate enough to approach the chaotic vastitude of our dictionary under your guidance."

FREE--"How to Become a Master of English."

This Booklet is absolutely free to adults. (It will not be sent to children.) It teems with information on English, and Mr. Kleiser's new, common-sense method of teaching it. You will find it of great interest and value. Send the coupon and get it free. No agent will call upon you.

$3 DOWN and this Standard

Standard Underwood

Rebuilt like new. Every typewriter is factory rebuilt by typewriter experts. New enamel—new nickeling—new lettering—new platen—new key rings—new parts wherever needed—making it impossible for you to tell it from a brand new Underwood. An up-to-date machine with two color ribbon, back spacer, stencil device, automatic ribbon reverse, tabulator, etc. In addition, we furnish FREE, waterproof cover and a special Touch Typewriter Instruction Book. You can learn to operate the Underwood in one day.

Yes, only $3.00 brings you this genuine TYPORIUM Rebuilt Standard Visible Writing Underwood direct from our factory, and then only small monthly payments while you are using it, makes it yours; or, if convenient, pay cash. Either way, there is a big, very much worth while saving, too. Genuine new Underwood parts wherever the wear comes—genuine standard four row, single shift keyboard—thoroughly tested—guaranteed for five years.

Easy Payments!

You don't even have to scrimp and save to pay cash. Instead, you pay only a little each month in amounts so conveniently small that you will hardly notice them, while all the time you are paying you will be enjoying the use of and the profit from the machine.

10 Days' Free Trial

Remember, you don't ever have to buy the machine until you get it and have used it for ten days' free trial, so that you can see for yourself how new it is and how well it writes. You must be satisfied or else the entire transaction will not cost you a single penny.

Get This Big Offer

There is no obligation to buy. Just try us. That's all we want now. Send us your name. We want to send you a free book that will open your eyes to the possibilities of typewriter rebuilding as done in our great, modern factory.

Send the Coupon

Now is the time when every dollar saved counts. Let us save you many dollars. Don't delay. Get this wonderful easy payment bargain offer now so you can send for and be sure of getting your Underwood at a big saving on our easy terms or for cash.

Be One of the Highest Paid Men in the World

Write for Free Book

By sending for this Free Book more than 45,000 men have begun to learn the secret of making more money. Some of them have increased their incomes as much as 1,000%. Thousands date their success in life from the day they wrote for it—among them men like Clarence Saunders, President of the Piggly Wiggly Stores Corporation, and T. E. Murray, Secretary and Treasurer of the Rochester Tank & Boiler Company.

The book contains full details of a plan by which at home—in your spare time—you may obtain a special training which will develop your reasoning power, give you a vast command of practical business knowledge, and may be the means of your entering the ranks of the HIGHEST PAID MEN IN THE WORLD.

The highest paid positions are being filled by men who have added law to their business knowledge. Recent Income Tax returns show that law-trained men earn the largest salaries. One noted financier predicts that in ten years every business executive in the country will be required to know law.

A simple, easy plan by which you may learn the principles of law has been worked out in the Modern American Law Course and Service of the Blackstone Institute by 80 leading experts, including ex-President Taft, J. Herbert Quick, formerly of the Federal Farm Loan Bureau and Henry P. Willis of the Federal Reserve Board.

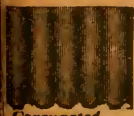
Lowest Prices Ever Made on World's Best ROOFING Freight Paid

"Reo" Metal ister Shingles

"Spanish" Metal Tile

wards Patent "Grip Lock"



Corrugated

Brick Siding

We sell direct to you and save you all middlemen's profits. We ship everything—roofing, siding, ceiling, wall boards, etc.—freight prepaid. We cannot quote you our low factory prices here, but send for our Big Roofing Book and see for yourself that our prices are lowest ever quoted.

"Reo" Metal Shingles

cost less, yet outlast three ordinary roofs. Need no painting or repairs. Rot--fire--weather--rust-proof. Insurance cost is less—guaranteed against lightning.

Edwards Exclusive Tightcote Process

makes Edwards Metal shingles, Metal Spanish Tile, Reo Cluster Shingles, Grip-Lock Roofing and other Roofings, Ceiling, Siding, etc., absolutely rust-proof. Not a pin point of space exposed to weather.

Our Patent Interlocking Device

prevents warping, buckling or breaking. Protects nail holes—nails are driven through under layer; not exposed to weather. No special tools required. Easy to lay.

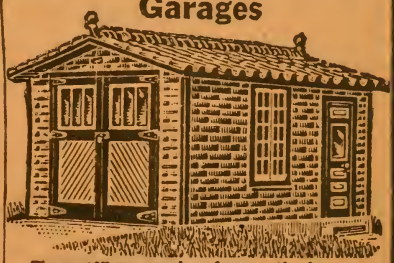
The Galvanizing Test

Take any other galvanized steel—bend it back and forth, hammer it down. Great scales of galvanizing will flake off. Apply this test to Edwards Metal Roofing—you'll find no flaking. Edwards products are **superior**—yet sell for less than other materials.

mples FREE Send coupon for World's Greatest Roofing Book and Free Samples. Book will convince you that we can save you a of money on any kind of roof you need, also on ceil-, siding, wallboard, etc. Fill out coupon and mail ay. Ask for Book No. 95.

e Edwards Manufacturing Company
45-95 Pike Street, Cincinnati, Ohio

Special Bargains in Garages



The money you pay in a few months for garage rent buys an Edwards' Metal Garage. Gives you every convenience—no phoning or waiting for your car. Gives you every protection—against careless handling, mars, scratches—against fire, lightning, thieves, etc.

Write for Catalog showing all sizes, all styles—"Steelcote," "All Steel" or "Stucco-Steel," Plain Rock Faced, Brick or Stone, or Weatherboard Siding, Metal Spanish Tile or Metal Shingle Roof.

Edwards' Portable Garages pay for themselves in a few months. After that saves enough to pay upkeep of car. Find out. Write for Catalog.

Why Institute Courses Are Most Practical

1. All Institute courses are of university grade and university length.
2. All members of the faculty are or have been successful teachers in schools and universities.
3. Courses may be pursued in your own home or in our classrooms.
4. Correspondence courses may be begun at any time.
5. There is no time limit to the completion of any course; certificates and diplomas are granted only when the pupil has satisfactorily completed the prescribed work.
6. Our faculty approaches all work from a strictly commercial viewpoint, thereby avoiding the dangers of too much theory.
7. Our Department of Vocational Guidance is at the service of all prospective students.
8. We assist you in securing a position after you have received your diploma.
9. The Institute is able to offer all the advantages which accrue from its ideal location in the financial and business center of the world.

Stop Forgetting!

The average mind resembles a scrap pile.

Makes Your Mind a File— NOT A Pile

The Dickson Trained mind is as well ordered as a cross-indexed file.

-S your mind a scrap pile—filled with a lot of unindexed facts? When you want to remember a ame, place or date, must you grope vain to locate the information? ummoned to give facts and gures—does your mind be- me a blank? When called on to speak—do you seek ildly to collect your thoughts -utter a few commonplace remarks — and sit down—humiliated? *Without Memory, all the knowledge in the world becomes worthless. "Stop Forgetting" makes your mind a file—not a pile.*

Perfect Your Memory and Command What Salary You Will

OF. HENRY DICKSON. most authority on Mem- Training and Principal ickson Memory School.

I Can Make Your Mind as Systematic and Forget-Proof as a Card Index File—master of ramifications—instead of a victim of disordered details. My course of mory Training perfected by 20 years' erience, recog- ed as most rough, ctical, ple st tem of its kind. Thoroughly trains the memory. Develops concentration—overcomes self-consciousness, bashfulness—enables you to address an audience intelligently without notes.

Dickson Memory Training Has Helped Thousands

Fill out and mail coupon or postal for statements from students who had poor memories and developed them to perfection—and men with good memories, who made them better. Give me 10 minutes daily, and I will make your mind a classified index from which you can instantly select facts, figures, names, faces.

Special Offer on "How to Speak in Public"

This de luxe, handsomely illustrated, $3 book free to everyone who enrolls. Will train you to think on your feet—express yourself clearly, convincingly, whether talking to one person or a thousand.

Get My Book on "How to Remember"

Send your name and address on coupon or postal. I will also send you a free copy of my unique copyrighted Memory Test.

HIGH SCHOOL COURSE IN TWO YEARS

YOU ARE BADLY HANDICAPPED

if you lack High School training. You cannot attain social or business prominence. You are barred from a successful business career, from the leading professions, from well-paid civil service jobs, from teaching and college entrance. In fact, employers in practically all worthwhile positions demand High School training. That's the way you are handicapped if you lack this vital training. But you can remove this obstacle to your success. The American School Course *meets every requirement.*

FIT YOURSELF FOR A BIG FUTURE

This Course will broaden your mind, and make you keen, alert and capable. It is complete, simplified, and gives you the same training as a resident school will. Lessons are written specially for home study and competent instructors guide and coach you from start to finish. It absolutely gives you the knowledge that now stands as a barrier between you and desirable positions.

USE IDLE HOURS ONLY

Most people *idle* away *fifty* hours a week. Probably you do, too. Use only one-fifth of that time for studying and you can easily remove your present handicap *within two years.* The question of your success hinges on whether or not you will devote a part of your spare time to this home study course of High School training.

TRAINING DECIDES PAY

There is only *one known way to increase your earning power*—only one way to get the position you want and the pay you want. *You must train.* The difference between $15 and $50 a week is measured only by training—knowing HOW. Let us assist you to acquire the knowledge you need. Our training does not interfere with your present work. Try ten lessons in any Course at our expense. Check and mail the coupon for full particulars and Free Bulletin.

$375.75 IN ONE DAY WITH THIS GREAT MACHINE

"$12,000.00 —and every penny of it made from Crispettes! I started out with nothing little over year ago." —Ira Shook

"$700.00 ahead ar have on been maki and selli Crispett two week A good o world aft all." —Kell

IRA SHOOK, of Flint, is taking in dimes right and left. Actually did amazing business of $375.75 in one day! My CRISPETTE machine does the trick! Makes those wonderful, toothsome, delicious confections that sell by the thousands. People everywhere—boys and girls, men and women—simply can't get enough. CRISPETTE men making fortune. Gibbs writes: "Sold $50.00 first night"! Erwin's little boy makes $35.00 to $50.00 every Saturday afternoon. Meixner reports sensational record of $600.00 business in one day! Master's letter says: "Sold $40.00 in one hour!"

Big Money in Crispettes

There is money—lots of it—for those who make and sell CRISPETTES. It's an easy, pleasant and fascinating business. **Experience not necessary.** You can start with very little capital. **I furnish everything**—secret formula, machine, accessories, supplies, raw materials, equipment, etc. It's a proposition you can easily handle. **Amazing successes made everywhere**—in cities, towns and villages. CRISPETTE eating habit grows and sticks wherever introduced. Splendid chances for phenomenal success in every section of the country.

$1,000.00 Month Possible

You are successful from very start. No slow building up process. **Trade grows by leaps and bounds.** Some men sell direct to public; others wholesale to stores. **All reap glorious financial harvest.** Crowded streets, movie throngs, packed bazaars and surging masses mean big money for CRISPETTE men. Raw materials are plentiful and cheap. **CRISPETTE profits enormous.** Don't do another thing until you have fully investigated this **wonderful opportunity.**

I Start You in Business

Write me. Get my help. **Begin making more money at once.** Others are traveling on easy street. You can too! Send for my illustrated book of facts. Contains enthusiastic letters from men and women who have succeeded quickly. Tells how to start. Explains most successful methods. Gives all information needed. **It's FREE for the asking.** Get quick action. Address letter personally to H. W. Eakins, General Manager.

Long Eakins Co., 259 High St., Springfield, Ohio

DETROIT

The Auto Center is the Logical Place To

LEARN AUTO AND TRACTOR BUSINESS

A future out of the ordinary is offered in the automobile business. There are now nine and one-half million automobiles in actual use in this country alone, besides the hundreds of thousands of tractors. Think of the business opportunities! that means 9,500,000 motors and electrical systems to keep up. 9,500,000 batteries to repair or replace. 45,000,000 tires to repair or replace. **Splendid opportunities for TRAINED men.** More competent men are needed, more garages must be started to take care of the increased repair work. Battery shops, welding shops, tire repair shops, electric service stations, are needed in every section of the country. **There are plenty of men for the low paid jobs, but never enough for the well paid jobs.**

Learn by Factory Endorsed Methods

What We Teach

Autos, trucks, tractors, stationary engines, farm lighting systems, tire repairing, welding and brazing, battery repairing, machine shop work. Actual practice on the best equipment teaches thoroughly and systematically.

Start Any Time

No need to waste more time. Students enter classes every day. Come to Detroit now, or write for catalog giving full information.

Packard Motor Car Co. says: "We have no hesitancy in recommending the M. S. A. S. in every particular." Cadillac Motor Car Co. says: "We believe you have the best and most complete school in the country." International Harvester Co. says: "We will gladly cooperate with you through our 90 branches."

Money Back Guarantee

We guarantee to qualify you for a position as repair man, demonstrator, auto electrician, garage man, automobile dealer, tractor mechanic and operator, chauffeur or farm lighting expert or refund your money. A similar guarantee is made with all courses. Each course includes Life Membership with privilege of our service without charge at any time.

Ask Us for Names of Graduates Near You

Our graduates succeed. Ask us for names of men near you—perhaps right in your town—who have taken the M. S. A. S courses. They will be glad to tell you what practical training did for them.

Write Today for New 188-Page Catalog

Our New 188-page Catalog tells in detail all about the courses at the M. S. A. S. Over one hundred new pictures of class work and equipment are shown. Each course is described and letters from the graduates tell what they have been able to do after taking the training. There are nearly fifty letters from the big auto and tractor factories and dealers stating their approval of our methods.

PATENTS TRADE-MARKS AND COPYRIGHTS

Special Offer—Free Opinion as to Patentable Nature

Before disclosing an invention the inventor should write for our blank form **"Evidence of Conception."** This should be signed and witnessed and if returned to us together with model or sketch and description of the invention, we will give our opinion as to its patentable nature.

Our Three Books Mailed FREE to Inventors

OUR ILLUSTRATED GUIDE BOOK
HOW TO OBTAIN A PATENT

Contains full instructions regarding Patents, Trade-Marks, Foreign Patents. Our Methods, Terms, and 100 Mechanicol Movements illustrated and described. Articles on Patent Practice and Procedure, and Law Points for inventors.

OUR TRADE MARK BOOK

Shows the value and necessity of trade-mark protection and gives information regarding unfair competition.

OUR FOREIGN PATENT BOOK

We have direct agencies in all the principal foreign countries and secure foreign patents in the shortest possible time and at the lowest cost. Write for our illustrated Guide Book on Foreign Patents, sent free to any address.

SPECIALIZATION—OUR STAFF

The field of invention is so vast that it is impossible for any one man to become an expert in all the different classes of invention. Only those practically skilled in the class to which the invention relates are capable of rendering efficient service. For this reason Victor J. Evans & Co., employ a number of patent lawyers and mechanical experts who have been selected for their special knowledge and ability in certain lines of invention. Each case is placed in charge of experts in the classes to which the invention relates.

THE VALUE OF YOUR PATENT

will depend much upon the skill and care with which your case is prepared and prosecuted in the United States Patent Office. This work will receive the benefit of skill and experience acquired by a long and successful practice. We spare neither time nor pains to secure the broadest possible patents that the inventions will warrant. That every case intrusted to us receives our best efforts, and that our work is done consistently, skilfully and thoroughly is evidenced by the many unsolicited letters of commendation that we receive constantly from our clients. We will furnish upon request lists of clients from any State in the Union for whom we have secured patents.

Our New York, Philadelphia, Pittsburgh, Chicago and San Francisco Offices

Owing to the growth of our business we have established for the benefit of our clients Branch Offices in New York City, Philadelphia, Pa., Pittsburgh, Pa., Chicago, Ill., and San Francisco, Cal. These branch offices being located in these large commercial cities, together with our Main Office located near U. S. Patent Office in Washington, enables us to more promptly handle the business of our clients, particularly as the branch offices are in constant touch with the Main Office and fully equipped to handle patent business in all its branches.

CAN STAMMERING BE CORRECTED?

For **Twenty-seven years** the Lewis School has been conducted in Detroit. Many thousands of pupils have come under the instruction of its Faculty; as a result the country is literally dotted with graduates who are now enjoying freedom of Speech.

AMERICA'S PIONEER SCHOOL.

We originated the school plan for the correction of Stammering and Stuttering and have corrected the speech of the **man at the head of every prominent school for Stammerers in America.** In other words, our graduates are now conducting schools in several other cities.

NATURAL METHODS.

Because our Advanced Scientific Methods are **natural** and based upon nature's laws for speech control, they are **indorsed by University Presidents and other prominent educators.** These methods have been the basis for every successful correction accomplished in recent years.

STUDY AT HOME—IF YOU CHOOSE.

There are laws for speech control, and these laws can be studied and mastered at home. Any enterprising person with normal intelligence can take the principles of speech production as taught by the Lewis Standard Course and work speech control out for himself right in his own home.

HUNDREDS HAVE DONE IT!

Parents of young children who stammer should investigate this. Write to-day for information about our Resident School and our Standard Course for Home Study. Do it now.

THE LEWIS SCHOOL FOR STAMMERERS

73 Adelaide Street, Detroit, Mich., U. S. A.

America's Pioneer School.

Easier to Earn $1000 a Month Than $18 a Week

How Chas. L. Berry Discovered the Secret of Big Money

IT is a whole lot easier to earn $1,000 a month than $18 a week. I know because I used to earn $18 a week, and now I am making $1,000 a month.

I have earned as high as $2,140 in one month. And it was all so amazingly easy! I do not work half as hard for $1,000 a month as I did for $18 a week. My hours are short—I am independent—I travel—meet big men—and I enjoy every minute of my work.

In fact, I do not understand why any ambitious man should work for small pay when big earnings are within such easy reach. **For what I have done any one can do.**

$1,000 the First Month

I started as a farmhand, making about $60 a month. A case of sunstroke forced me to quit. Then a job in a variety store at $18 a week. Probably I would have gone on indefinitely working for small pay if I hadn't discovered **that the big money is in the selling end of business and any man of normal intelligence and ambition can quickly become a Master Salesman.**

Heretofore it was thought that a man must be a "born" Salesman. But now the wonderful opportunity to achieve quick and big success is thrown open to every one through the National Salesmen's Training Association. This is an organization of top-notch Salesmen and Sales Managers formed just for the purpose of fitting men to become Master Salesmen.

I owe my success to the day I wrote for particulars of their system of Salesmanship Training and Free Employment Service. The answer I received absolutely astounded me—it was nothing short of a revelation. I read how hundreds of men after slaving for years at small pay suddenly stepped to magnificent earnings. Warren Hartle of 4425 N. Robey St., Chicago, for example, after ten years in the railway mail service earning $900 to $1,600 a year, became a Master Salesman and made $1,000 in thirty days. George W. Kearns of Oklahoma City earned $524 in two weeks. He had previously been earning $60 a month. And C. W. Campbell of Greensburg, Pa., $1,562 in thirty days.

Startling Proof Sent Free

In short, the PROOF was so overwhelming that I accepted the offer of the N. S. T. A. to make me a Master Salesman. It just required some of my spare hours at home. Almost before I knew it I found myself ready to accept a position as Salesman with a big company to which the N. S. T. A. recommended me. My first month in this position netted me $1,000.

That is why I suggest that if you are ambitious to take your place in the ranks of the big money-makers, write to the N. S. T. A. Entirely free, you will receive a wonderful book on Salesmanship, and amazing proof that no matter what you are doing now you can quickly become a Master Salesman in your spare time at home. You will read how others are to-day earning five, ten and fifteen times as much money as they had ever earned before. Just mail the coupon. There is no cost or obligation. Address National Salesmen's Training Association, Dept. 50-A, Chicago, Ill.

National Salesmen's Training Association,
Dept. 50-A, Chicago, Ill.

Please send me your Free Salesmanship Book and Free Proof you can make me a Star Salesman. Also tell me how the Free Employment Service of the N. S. T. A. will help me to a Selling position and send list of business lines with openings for Salesmen.

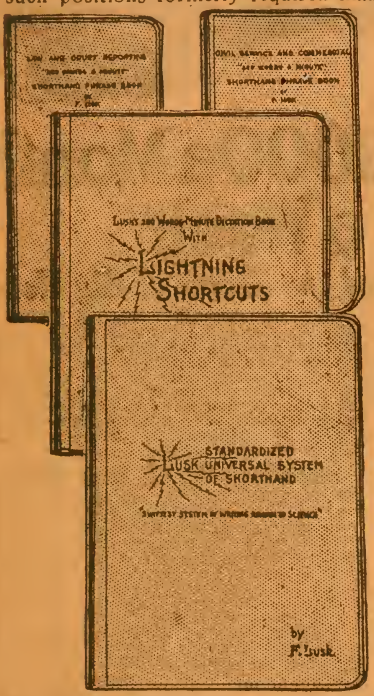
Pitmanic Shorthand

practically the only system, and the standard used for VERBATIM REPORTING throughout the English Speaking World for nearly 80 years; used by reporters in Houses of Parliament, London; House of Representatives and U. S. Senate (Chief of the Senate Reporters receiving $25,000 yearly; highest salary paid any stenographer in the world); used by every Court Reporter in New York City and by all Court Experts in every State in the Union; the high rate of speed necessary for such positions formerly required many years of practice; with the modern Lusk Method every stenographer now, in a few months, can take even faster than the swiftest speaker can articulate.



NEW 1922 400 Word-a-Minute LUSK SHORTHAND

Pitmanic now Marvelously and Scientifically Improved by the Lusk Standardized Universal Called "Standardized Universal" because the Standard Pitman alphabet is used, and the expedients and shortcuts are used by 99% of the reporters of the world.

Greatest Improvement made in 40 years in phrasing and arrangement of text-books. Twice as rapid as the Swiftest Pitmanic four times as rapid as the Swiftest Non-Pitmanic ever devised.

A Lusk writer can record almost any sentence in the English language twice while a writer of the Swiftest Pitmanic is recording it once. Or FOUR TIMES while the Swiftest Non-Pitman writer is recording it ONCE.

Lusk Stenographers can pass any Civil Service examination held, and, owing to their terrific speed, command twice or thrice the salary of ordinary stenographers.

Ordinary Shorthand Systems enable only two or three out of 10,000 stenographers to take over 100 Words-Minute (simple letter). With the Lusk Method, every stenographer can take over 200 Words-Minute on technical matter.

Beginners' Courses

By the arrangement of these wonderful text books, beginners knowing absolutely nothing about shorthand are required to commence the dictation of letters at 100-words-minute in the briefest reporting style, after five lessons. By the marvelous Simplification of Pitmanic Shorthand, only one-third of the time is now required to obtain double the speed.

Post-graduate Courses for Stenographers. Pitman, Graham, Munson and all Pitmanic Writers are trained by the Lusk text-books to take 200 to 300 words-minute; 400 actually possible.

Books for Self-instruction on sale. Mail and personal courses for both beginners and advanced writers of any Standard System.

Stenographers unaware of the great improvement made in Shorthand the past year send for Demonstration and Specimens gratis.

Lusk Institute Corporation

Department E 229 W. 42 St., Selwyn Theatre Bldg., N.Y.

MASTER YOUR MEMORY!

Regardless of how poorly or how well it serves you now, you can direct your memory to the accomplishment of most amazing and practical feats. You can give it phenomenal power! You can develop it scientifically, yet with astonishing ease, to instantly yield at your command, its almost boundless treasures of knowledge and fact.

In your memory, you have a mighty force of which you are now utilizing but an insignificant part. All of your life you have been storing in your mind an inconceivably vast array of facts. Everything you have seen, read, or heard, has made its impression there. Through William Berol's remarkable system you can call upon your memory to give you vital information to suit every occasion—to win arguments, to guide you in business undertakings, to give you quotations from the works of the greatest poets and authors which you have read for use in making your conversation more brilliant. In fact, through the Berol method, you may develop a metal prowess that will astound you—that will carry you irrestibly into those higher levels of achievement toward which you are now bending your efforts.

William Berol Has The World's Most Marvellous Memory

He can instantly give the population of any place in America over 5,000.

He can give without hesitation every important incident and date in the world's history.

He can give the dates of birth and death of the great men of history.

He has 300,000 facts and figures stored away in his brain, ready for instant use.

His System Is Quickly Learned and Easily Applied

Mr. Berol's amazing mental efficiency is solely the result of his own simple, practical method—the same method he uses to teach you. He does not foster fads or fancies. You have no laborious "tables" to learn by rote. His method is scientifically sound, based on the demonstrable laws of psychology. Any person of normal mind can easily understand and apply it.

Mr. Berol has perfected his system to such a degree that he can impart it to you quickly, thoroughly, and easily **by mail. You can learn it in the comfort of your own home,** in your spare time, and choose your moments of study. It will prevent mind-wandering, strengthen powers of observation and concentration, and develop will-power. Use it and you will be able to recall names, faces, rates, telephone and book numbers. You can remember the salient facts in a book or anything else you read, after one reading. You can instantly recollect important business and professional facts or memoranda. You can become a clear thinker and in public speaking retain a firm grasp on what you desire to say.

Proof Unquestionable

"Your system is the finest and most resultful that I have ever studied, and I have subscribed for and studied quite a few."—Carl Johnson, St. Paul, Minn.

"I regard your method of memory training as excellent. If properly followed, it will produce remarkable improvement in all students."—Dr. V. P. McIntosh, U. S. Public Health Service, Portland, Me.

"New ideas are developed . . Facts of usefulness buried years ago are now realized."—Dr. Fred J. Sperling, Wilkes-Barre, Pa.

Earn Big Money

Get Jobs Like These

MEN WANTED

Young Men Mechanically Inclined, Get Into the Automobile Business Now —and Make Real Money!

Sweeney trained men are in demand everywhere at good wages, ***$50.00 A WEEK—AND MORE***—from garages, tire shops, welding concerns, auto repair shops, etc. In the last six months farm products have all gone down *but autos still kept running and no trained mechanic had to hunt for a job.* Top wages are paid but ***Sweeney Trained Men*** are wanted. Here's the proof:

I Will Pay Your Railway Fare to Kansas City

Come to the world's largest and best trade school at no more expense than if it were located in your home town, for I am rebating fares from any point in the U. S. to the Sweeney School. No advance in tuition, no extras—just a fair, square rebate. No matter where you live this brings the Sweeney Million Dollar School to your doors.

Hundreds of Openings for Men

South Dakota wires: "Will pay most any price for good man. Send him right away." Neck City, Mo., says: "Put us in touch with a first class repair man. Excellent opening." Indiana says: "Want one more Sweeney man for my new garage. Steady work at good prices." Kansas appeals: "Send man who understands Ford Car from A to Z. Will pay top wages." Mississippi wires: "Want a post graduate mechanic. Will pay all he is worth. Wire my expense." Florida calls: "Want head mechanic. Will pay $50 a week. Let me hear by return mail." **Thousands of Sweeney graduates now owning their own business** in various parts of the country **naturally favor** Sweeney trained men. Sweeney loyalty is wonderful. Our daily mail is conclusive proof that the trained man with a **SWEENEY** diploma can secure jobs like these at $50 a week and more. Simply send name to-day, a post card will do, for full information.

"I Guarantee Agent's Profits"

GET MELLINGER'S FREE BIG NEW TIRE BOOK

and Earn $5,000 a year!

I have tire salesmen all over the country whose money making records would surprise you.

If you are looking for **real profits** and quick, easy sales, simply send me your name to-day. I will make you a proposition that is **sure fire.** My startling prices and inside facts and figures ought to be in your hands **now.**

$1,436 in 3 Months!

My agents sell tires by the phenomenally successful new Mellinger Plan. I have sold as much as $13,000 worth in one order to a single agent. I will start you in business. You need make NO INVESTMENT. Without you risking one cent I will guarantee your profits. I can refer you to hundreds of prosperous agents. Mr. Tweedie, of Maine sells $1,436 in three months! Booth of Ohio says: "Have sold 33 tires since I started." It's easy because you sell Better Tires for LESS Money, and my plan can't be duplicated.

"I watch the tires on my friend's cars and when they need a new one I get the order. In this manner I have sold twenty-one tires since taking the agency." E. Roeschlein, Brazil, Ind.

"Here is another order for fourteen tires. I am going to advertise in the papers. I have sold 33 tires since I started," W. W. Booth, Wellston, O.

Better Tires for Less Money.

The foundation rock of my agent's success is that they sell better tires for less money. 8,000 miles Guarantee Bond behind Mellinger Extra Ply Tires. 10,000 miles guarantee behind Mellinger Cord Tires. Think of buying this splendid Cord Tire for less than the old fabric tire cost! Examine these tires yourself—see these amazing values before you invest one cent. The exclusive tread on Mellinger tires is protected by Patent No. 58612. This gives a special value and talking point.

I Set Tires Free!

Throw your old tires away and ride on brand new Mellinger Extra Ply or Cord Tires that I will give you for a little of your time and good will.

ACT QUICK. Remember that I appoint only one exclusive agent in each locality. And I guarantee your profits. Send your name to-day for Wholesale Prices and my confidential offer. Get my free book. Sample sections furnished.

Get These Facts Quick!

Do you know what auto tires really cost? How to get jobber and dealer discounts off present reduced prices? How my NEW PLAN has made a phenomenal success in all parts of the country? Every auto owner, whether he wants to go into the tire agency business or not, should have my startling facts and figures and inside prices. Rubber has dropped from 60c to 15c. Cotton dropped 50c a pound. Get my real wholesale prices! No obligation—just send name for Free Book.

I GIVE YOU EXCLUSIVE AGENCY

If you are making less than $5,000 a year write me quick. I want exclusive agents—all or part time. You take no risk—carry no expensive stock—need no experience! I can refer you to hundreds who answered my ad. and have built up a fine business of their own.

My method is to get behind you and put you on to all successful selling plans and methods. You don't tie up a lot of money. You haven't any waste motion. I refer customers to you. I make it easy for you to build up a permanent business on values so big that competitors are knocked sky high. Don't delay—don't give somebody else your territory. Write me a post card to-day for free books.

Simple Rules of Drawing

Easily Learned at Home

Become An Artist

If you have ever wanted to become an artist here is the opportunity that you have been waiting for! We have brought the principles of drawing right down to fundamentals. Through our wonderfully simple home study course in art hundreds of men and women have become high salaried artists. And so can you! A few hours a week of your spare time is all that is required.

Wonderful New Method

This amazingly simple method makes it possible for *anyone* to learn Illustrating, Designing or Cartooning. All superfluous technique and dry theory is omitted. You enjoy studying—it's actually fascinating! In a few weeks you should be drawing pictures that you can *sell*—pictures that you never before thought could come from your pencil. You will be astounded at your own rapid progress! Many of our students have gotten as high as $75 for a single drawing even before they finished the course. Get into this field of big opportunities! No profession is more fascinating or better paying.

Hundreds of Trained Artists Needed

Never before have artists been in such big demand as they are right now—to-day. Magazines and newspapers cannot get enough good cartoons and drawings. Designers are at a premium. Business concerns are actually bidding against each other for the services of men and women to handle their art work. Everywhere there is a crying scarcity of trained artists. There are hundreds of vacancies in all parts of the country. Follow the footsteps of our successful graduates and students. Many of them are now making from $75 to $250 a week. You can do as well! A little study in your leisure moments each day is all that is necessary.

"How to Become an Artist"—FREE

Write for this wonderfully interesting illustrated book at once! It explains in detail our wonderful new method of teaching and contains many interesting stories of our students, telling of their remarkable progress. Shows how you can quickly step into one of the big-paying artist's positions now open. Gives you full particulars of our SPECIAL ARTIST'S OUTFIT OFFER to a limited number of new students. Our amazing book is yours absolutely FREE! Send for it NOW—before you do another thing!

Brunswick TIRES

Sold on an Unlimited Mileage Guarantee

The name insures extra service

CONSIDER the name these tires bear. Think what it means to you in quality and dependability.

For over 75 years the Brunswick-Balke-Collender Co. has represented the highest ideals in manufacturing. Its name and its products have set new standards of worth in merchandise.

Only the best tires possible to produce could merit the Brunswick name. We could not afford to risk this priceless asset on a tire that would not render the utmost in service and satisfaction.

Try one Brunswick. Keep a record of its performance. Then you, like many thousands of others, will drive on four Brunswicks with another of these dependable tires as your "spare."

"Clean as a Whistle"

"Not a spot—practically as good as the day I bought it." You can say that, too, if you regularly use

Pyramid Solvent

Made by the makers of that famous gun oil—3-in-One. Tested by expert military and civilian shots before being offered to you. Capt. William F. Gorman, U. S. Inf., says:

"I have cleaned a rifle with Pyramid Solvent, at times hours after leaving the rifle range, and after at least one hundred rounds had been fired, removing every particle of the poisonous, smokeless residue. In every single instance the bore was left shining bright."

Pyramid Solvent easily and quickly dissolves high power smokeless and black powder residue. Loosens metal fouling. Contains no moisture to cause rust and no chemical that attacks the gun metal. Try it. Prove it.

After Pyramid Solvent, use 3-in-One Oil to prevent rust and to lubricate.

Pyramid Solvent is for sale by most firearm dealers; 3 ounces in a convenient flat can that fits pocket or shooting kit, 30c per can. If your dealer can't supply you, send 35c, cash or stamps, and we will send you a can postpaid.

Three-in-One Oil Co.

71 Broadway, New York

Single Types Word Pictures

IN READING, the eye picks up words, not single letters. Each word forms a picture. The closer the letters are fitted together the more readily the eye can transmit this picture to the brain. An example of this is that we more easily visualize the appearance of a village, where the houses are close together, than the surrounding sparsely settled countryside. The Monotype is the only typesetting machine that casts single types and thus permits closer fitting of letters and proper spacing between the words

The New York World uses nine Monotypes for setting ads and operating the Non-Distribution System

LANSTON MONOTYPE MACHINE COMPANY
PHILADELPHIA
New York Chicago Boston Toronto Birmingham
Monotype Company of California: San Francisco

Don't tell me you never had a chance!

"Four years ago you and I worked at the same bench. We were *both* discontented. Remember the noon we saw the I. C. S. advertisement? That woke me up. I realized that to get ahead I needed special training, and I decided to let the I. C. S. help me. When I marked the coupon I asked you to sign with me. You said, 'Aw, forget it!'

"I made the most of my opportunity and have been climbing ever since. You had the same chance I had, but you turned it down. No, Jim, you can't expect more money until you've trained yourself to handle bigger work."

There are lots of "Jims" in the world—in stores, factories, offices, everywhere. Are *you* one of them? Wake up! Every time you see an I. C. S. coupon your chance is staring you in the face. Don't turn it down.

Right now, thousands of men are preparing themselves for bigger jobs and better pay through I. C. S. courses.

You can join them and get in line for promotion. Mark and mail the coupon, and find out how.

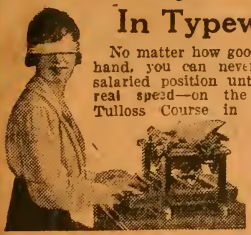
BE A BIG MAN'S RIGHT HAND

Business Executives Everywhere Calling for Private Secretaries—*Men and Women*

Nothing scarcer in the business world to-day than the competent private secretary. Hundreds of opportunities open, but few who can meet the speed and accuracy requirements of the high-pressure executive. More than anything else, the busy business man demands of a private secretary speed and accuracy in shorthand and typewriting! The executive of to-day works fast, but surely. He wants the man or woman who is exceptionally fast and certain in shorthand and typewriting. And he is more than willing to pay the price.

Train by Mail in the "New Way"

In Typewriting or Shorthand or Both



No matter how good you are in shorthand, you can never expect the high-salaried position until you get speed—real speed—on the typewriter. Take Tulloss Course in Speed Typewriting and be able to write 80 to 100 words a minute—with accuracy! 10 easy lessons by mail—and marvelous speed is yours!

If you are not a stenographer, here's your chance to get into this lucrative profession. Take the Tulloss "New Way" course in **Stenography** (both Shorthand and Typewriting). Train at home, after work or after school. Only about half the usual cost, yet you become a far better stenographer—one who can start right in at a big salary instead of at the usual beginner's salary.

Typewrite 80 to 100 Words a Minute—10 Easy Lessons

You can typewrite 80 to 100 words a minute the Tulloss "New Way." And with this speed goes Accuracy and Ease of Operation. Clean, correct work. No fatigue as in typewriting the "old way." 10 easy lessons—by mail.

Free Book!

Write today for this free book—"How to be a Big Man's Right Hand." Tells how business men choose their private secretaries and what they pay them, etc. Also explains in full the "New Way" in typewriting and shorthand. Mark the coupon for free book, indicating also the particular Tulloss course in which you are interested. Mail coupon.

How to Speak and Write Masterly English

The Art of Making Language Power WIN for You. Sherwin Cody's New Invention Improves Your English in Fifteen Minutes a Day

DO you write and speak correctly or do errors reveal you and handicap you? Every time you talk, every time you write, you show what you are. When you use the wrong word, when you mispronounce a word, when you misspell a word, when you punctuate incorrectly, when you use flat, ordinary words, you handicap yourself tremendously. Words are the driving, compelling force in business. Ideas cannot be expressed except through words. An unusual command of English enables you to present your ideas clearly, forcefully, convincingly.

A simple method has been invented by which you can acquire a command of the English Language in only 15 minutes a day. Sherwin Cody, one of the best-known teachers of practical English, after twenty years of research and study, has perfected an invention which places the ability to talk and write with correctness and force within reach of every one with ordinary intelligence.

SHERWIN CODY

Self-Correcting Method

Mr. Cody was granted a patent on his unique device, and now he places it at your disposal. You do the lesson given on any particular page, then you see just how Mr. Cody would correct that paper. You mark your errors and check them in the first blank column. Next week you try that page again, on the second unmarked sheet, correct your errors, and check them in the second column. You see at a glance what you have failed to remember, and at the bottom you compare your average with that of average grammar school graduates, high school graduates, and experienced stenographers, until you have reached the 100 per cent. point in spelling, punctuation, grammar, expression, and grammatical usage.

And the wonderful thing about Mr. Cody's course is the speed with which these habit-forming practice drills can be carried out. When you write the answers to fifty questions in 15 minutes and correct your work in 5 minutes more, it gives you a good idea of the practical and effective value of this course.

New Booklet FREE

A booklet explaining this course in detail is ready. If you ever feel your lack of language power, if you are ever embarrassed by mistakes in grammar, spelling, or punctuation, if you cannot instantly command the exact words with which to express your ideas, this book will prove a revelation to you.

A polished and accurate command of the English language not only gives you the stamp of education, but it wins friends and convinces the world of your power. Many men and women spend years in high school and in college largely to get the key to social and business success. And now a really efficient system of acquiring an unusual command of English is offered to you. Spare-time study—15 minutes a day—in your own home will give you power of language that will be worth more than you can realize.

Write for this new free book, "How to Speak and Write Masterly English." Merely mail the coupon or a letter, or even a postal card. You can never reach your greatest possibilities until you know language. Write to-day for the free booklet that tells about Mr. Cody's simple invention for making command of language easy.

Why I Cried After the Ceremony

Two whole months I planned for my wedding day. It was to be an elaborate church affair, with arches, bridesmaids and sweet little flower-girls. Bob wanted a simple ceremony—but I insisted on a church wedding.

"We are only married once, you know," I laughed. "And oh, Bob," I whispered, nestling closer, "it will be the happiest day of my life."

Gayly I planned for that happy day and proudly I fondled the shimmering folds of my wedding gown. There were flowers to be ordered, music to be selected and cards to be sent. Each moment was crowded with anticipations. Oh, if I could have only known then the dark cloud that overshadowed my happiness!

At last the glorious day of my marriage arrived. The excitement fanned the spark of my happiness into glowing and I thrilled with a joy that I had never known before. My wedding day! The happiest day of my life! I just knew that I would remember it forever.

A Day I Will Remember Forever

How can I describe to you the beauty of the church scene as I found it when I arrived? Huge wreaths of flowers swung in graceful fragrance from the ceiling to wall. Each pew boasted its cluster of lilies, and the altar was a mass of many-hued blossoms. The bridesmaids, in their flowing white gowns, seemed almost unreal, and the little flower-girls looked like tiny fairies as they scattered flowers along the carpeted aisle. It was superb! I firmly believed that there was nothing left in all the world to wish for. The organist received the cue, and with a low, deep chord the mellow strains of the triumphant wedding march began.

Perhaps it was the beauty of the scene. Perhaps it was the strains of the wedding march. Perhaps it was my overwhelming happiness. At any rate, the days of rehearsal and planning vanished in a blur of happy forgetfulness, and before I realized what I was doing, I had made an awful blunder. I had made a mistake right at the beginning of the wedding march, despite the weeks of careful preparation and the days of strict rehearsal!

One Little Mistake—and My Joy Is Ended

Some one giggled, I noticed that the clergyman raised his brows ever so slightly. The sudden realization of the terrible blunder I was making caused a pang of regret that I had not read up, somewhere, about the blunders to be avoided at wedding ceremonies. A hot blush of humiliation surged over me—and with crimson face and trembling lip I began the march all over again.

It all happened so suddenly. In a moment it was over. And yet that blunder had spoiled my wedding day! Every one had noticed it; they couldn't help noticing it. All my rehearsing had been in vain, and the event that I had hoped would be the crowning glory of my life proved a miserable failure.

Of course all my friends told me how pretty I looked, and the guests proclaimed my wedding a tremendous success. But deep down in my heart I knew that they did not mean it—they could not mean it. I had broken one of the fundamental laws of wedding etiquette and they would never forget it. After the ceremony that evening I cried as though my heart would break—and, incidentally, I reproached myself for not knowing better.

I Buy a Book of Etiquette

After the wedding there were cards of thanks and "at home" cards to be sent. The wedding breakfast had to be arranged and our honeymoon trip planned. I determined to avoid any further blunders and so I sent for the famous "Book of Etiquette."

Bob and I had always prided ourselves on being cultured and well-bred. We had always believed that we followed the conventions of society to the highest letter of its law. But, oh, the serious breaches of etiquette we were making almost every day!

Why, after reading only five pages I discovered that I actually did not know how to introduce people correctly! I didn't know whether to say *Mrs. Brown, meet Miss Smith;* or *Miss Smith meet Mrs. Brown.* I didn't know whether to say *Bobby, this is Mr. Blank;* or *Mr. Blank, this is Bobby.* I didn't know whether it were proper for me to shake hands with a gentleman upon being introduced to him, and whether it were proper for me to stand or remain seated. I discovered, in fact, that to be able to establish an immediate and friendly understanding between two people who have never met before, to make conversation flow smoothly and pleasantly, is an art in itself. Every day people judge us by the way we make and acknowledge introductions.

Blunders in Etiquette at the Dance

Bob glanced over the chapter called Etiquette at the Dance. "Why dear," he exclaimed, "I never knew how to dispose of my dancing partner and return to you without appearing rude!—and here it's all explained so simply." We read the chapter together, Bob and I, and we found out the correct way to ask a lady to dance and the polite and courteous way for her to refuse it. We found out how to avoid that awkward moment after the music ceases and the gentleman must leave the lady to return to his original partner. We even discovered the correct thing for a young girl to do if she is not asked to dance.

"We will find invaluable aid in our 'Book of Etiquette,'" I said to Bob. "It tells us just what to do, what to say, what to write and what to wear at all times. And there are two chapters, I see, on foreign countries that tell all about tips, dress, calling cards, correspondence, addressing royalty and addressing clergy abroad. Why, look, Bob, it even tells about the dinner etiquette in France, England and Germany. And see, here is a chapter on wedding etiquette—the very mistake I

nade is pointed out! Oh, Bob, if I had nly had this wonderful book, I never vould have made that blunder!"

My Advice to Young Men and Women

The world is a harsh judge. To ie admitted to society, to enjoy he company of brilliant minds, nd to win admiration and respect or one's self, it is essential for the voman to cultivate charm, and for he man to be polished, impressive. And only by following the laws of etiquette is it possible for the woman to be charming and the nan to be what the world loves .o call a gentleman.

I would rather lose a thousand dollars than live through that awful noment of my wedding again. Even now, when I think of it, I blush. And so, my advice to young nen and women who desire to be cultured rather han coarse, who desire to mpress by their delicacy of taste and breeding, is —**"send for the splendid wo-volume set of the Book of Etiquette."**

Send for it that you nay know the correct thing o wear at the dinner and the correct thing to wear at the ball. Send for it that you may know just what to do and say when you overturn a cup of coffee on your hostess' table linen. Send for it that you may know the proper way to remove fruit stones from your mouth, the cultured way to use a finger bowl and the correct way to use napkins. Send for it, in short, that you may be always, at all times, cultured, well-bred and refined; that you may do and say and write and wear only what is in the best of form and utterly in accord with the art of etiquette.

"Before I realized what I was doing, I had started the wedding march with an awful blunder in etiquette."

"Book of Etiquette"

In Two Comprehensive Volumes

Sent FREE for Five Days

Can You MANAGE a Business?

"A great executive!"

Time and again you've heard that phrase, but have you ever analyzed it?

Have you ever figured out why one man can swing a managerial job at a salary reckoned in five figures, while another fellow—you, perhaps, who started even with him—must peg away at a low-pay job?

You have doubtless noticed that the General Manager of the big concern is rarely a "genius" at any one particular branch of his business. He is able to direct others, to be sure—but then, practically any one with ordinary sense and ability and courage can do that—provided he has the knowledge on which to base decisions.

No! The secret of the General Manager's rise to business power is not brilliant salesmanship or shrewd buying or wizardry at finance. He swings the big job because he has a sound working knowledge of all the factors that control his business. He has simply acquired that broader understanding of business principles and practice which is behind nine-tenths of all the "executive ability" in the world.

Master Management by the "Problem Method"

Why not resolve to-day to master this modern science of business management? There's a big job at big pay actually searching for every man who can do the work!

Thousands of ambitious men, thru the LaSalle "Problem Method," have quickly doubled, tripled and even quadrupled their salaries—and as a result are to-day in private offices of their own—with MANAGER in big letters on the door.

In the quiet of your own home, without losing an hour from work or a dollar of pay, you, too, can learn to handle the big problems of business, under the direction of men themselves conspicuously successful in business. By the LaSalle "Problem Method" you will work out, under their guidance, actual problems lifted bodily from business life. You can learn to do by doing. It is fascinating, practical work—and it leads swiftly and directly to the big-pay jobs.

The LaSalle course in Business Management gives in this interesting way the methods of authorities in Personal Efficiency, Business Psychology, Business Law, Economics, Organization, Employment, Banking and Finance, Investment, Advertising and Selling, Credits and Collections, Traffic, Accounting and every other essential subject which should be included in a broad, executive training.

Send to-day for full information regarding the La Salle course in Business Management. Also your free copy of "Mastering the Knack of Management"—and of that inspiring book, "Ten Years' Promotion in One." The coupon will bring all this without obligation. Mark and mail it NOW.

Big Salaries for PRODUCTION MANAGERS

Why Not Get in Line?

"More work—better work—less waste!"

Industry is literally combing the country for men who know how to pick the most efficient workers for the job, how to train them, how to organize production so that the work will move smoothly and swiftly to completion.

Methods in the more progressive shops have been vastly improved within the last few years. The old-time rule-of-thumb foreman is no longer sure of his job. A science of **modern foremanship** has been developed—based on the tried and proved experience of the most practical production men in the country.

Great strides have been taken in the scientific **selection of men**—and in the effective co-operation of management and labor. A science of **personnel management** has been developed. Big concerns, under competent Managers of Personnel, are analyzing the fitness of individuals for particular tasks, supervising their training, organizing and conducting employee organizations, and in general seeing to it that a smooth-working "labor-policy" is in effective operation.

"Scientific Management" has been reduced to laws and principles which must be wisely applied to every department of production—by every business which hopes to survive in this new era of intense competition.

A new science of **industrial management** has come out of this. Training has been devised which reduces to simplest terms the basic principles of organization, investigation, re-use, planning, budgeting, measurement, standard conditions, standard supply, standard operations, standard personnel scheduling, routing, dispatching, incentive and co operation.

Train by the "Problem Method"

Are you aiming at a bigger job in Production? Then you absolutely need a sound working knowledge of the scientific methods now in use in the most successful manufacturing institutions in the United States. These methods have been worked out clearly and simply. All the deadwood has been eliminated. You can master these methods by the famous La Salle "Problem Method" in your spare time, in the quiet of your own home, without losing an hour from work or a dollar of pay. You can train and qualify for a managerial position. It's easy, because the methods set forth in the three La Salle courses named below are **practical.** You can immediately apply them in your work—with results that count and count **big.** It's the surest and quickest way to boost your pay.

La Salle courses are authoritative. The La Salle course in **modern foremanship and production methods,** for example, is under the personal direction of Mr. Hugo Diemer. During his career Mr Diemer has had charge of production at the Goodman Manufacturing Co., Chicago, has been Superintendent of the National Motor Vehicle Company of Indianapolis, and head of the Industrial Department, Pennsylvania State College; during the war he was Commanding Officer of the U. S. Cartridge Company of Lowell and on the staff of the Commanding Officer of the Bethlehem Steel Works and for a year and a half was Personnel Superintendent of the Winchester Repeating Arms Company

Find out about this training. Get in line for one of the big production jobs. The coupon will bring you full information, also particulars of our easy payment plan. Check and mail the coupon **now.**

How I Made $1150 in Eleven Months —Right in My Own Home

My spare-time earnings made the first payment on our home. We plan to pay the rest the same way. Read how simple it is to turn spare hours into dollars.

By Mrs. Frank Unger

WHEN we were first married my husband and I used to make a little game of paying the household bills. Every Saturday afternoon, as regular as clockwork, I got out the bills, and he produced his check book, and settled up with everybody. We used to call it "wiping the slate clean." Back in those days there was always plenty of cash to meet the bills, and maybe enough left over for a couple of theatre tickets or a little outing.

Then by and by we began to notice that somehow there wasn't any surplus. Prices were increasing and my husband began to look grave as he drew the checks. I too was worried.

Our expenses were steadily increasing. My husband's wages were hardly enough to meet the household accounts, to say nothing of clothing. And so things ran along for months, with us pinching and skimping and trying desperately to break even.

I began wondering what I could do to help. Surely there must be **something.** To go out and work was impossible, because I had a four months' old baby to care for.

How COULD I Make Money?

There was just one thing for me. I must find some sort of home work that would pay good wages. What could I do?

I began looking in the magaz and newspapers for some sort of ing home work. I used to get migl discouraged in my search, for not came of it.

Then, one day I opened the p to look for work, as usual. An one of the pages this headline ca my eye: "How I Make Money F at Home." Of course I starte read and soon I was real excite was about a woman whose hus got a small salary—hardly enoug them to live on, with everythir expensive. She wanted to make money just as badly as I did. B had two little children, so she co do any paying work unless she find something to do at home was my situation exactly.

Then it went on to tell how at la did find profitable home work—n socks on a hand knitting machin how the company paid her for r them, and furnished replacement y each lot of standard stocks she s The name of the firm was the Knitter Hosiery Company, and the located at Buffalo, N. Y.

I wrote a letter to the company, for their free information. In just days I had a reply telling me all the machine, and the details o home work proposition. And then more enthusiastic than ever.

My husband was doubtful about i finally he said: "Your judgment is pretty good. If you really believe y make money with an Auto-Knitte send and get one."

How I Started

And that is exactly what I did. the order just as fast as I could. pretty soon my knitter arrived. think now how simple it was to run my Auto-Knitter when I sa and went at it with the Instructio as my guide. If I had done th carefully when I first received r chine I should have made a perfe much quicker than I did. Th makes everything so clear:

I submitted the first faultless sock I made to the Auto-Knitter Hosiery Company. They said it was fine and they would buy all I could make like it. I was as happy as a lark! At last I had a way to make money without leaving my home and baby.

The home the Auto-Knitter is paying for.

Well, I started to work then in real earnest, putting in every minute I could spare from my housework. The first week I made only one dozen pairs, but the next week I made two dozen, and went on increasing until I could make twelve dozen pairs a week in my spare time. And all the while checks from the Auto-Knitter Hosiery Company kept coming in for each lot of standard socks I sent them. I think the pay for this home work is wonderful. I love my work more each week. And the beauty of it is that I don't have to keep regular hours. I can knit whenever I have a few moments to spare, besides taking care of my baby and doing the housework.

Mrs. Frank Unger.

Made Over 7,000 Pairs

My socks have always been cheerfully accepted and paid for by the company, except a few that I could easily make over. I have knit over 7000 pairs of men's socks. Several hundred pairs were sold to my friends. When I sell one pair in a family it isn't long before all of the menfolks buy from five to six pairs. I sell them at $1.00 a pair, realizing a nice profit. I have had my machine eleven months, and I have made in all $1,150.00 out of the socks I have knit with it. With this money we have made the first payment on our home, and plan to pay the rest in the same way. In addition, I have made my original investment for machine and yarn. Just imagine what it has meant to us to have more than $100.00 "extra" money coming in each month! And now we are realizing the dream of a lifetime—a little cottage of our own. Our Auto-Knitter has made it possible. To those who want to make extra money at home in their spare time I heartily recommend the Auto-Knitter. There is nothing like it.

"I love my work more each week," says Mrs. Unger.

Mrs. Frank Unger, New York.

Now You, Too, Can Make Money at Home

We asked Mrs. Unger to tell you, in her very own words, her experiences with the Auto-Knitter, because we wanted you to know what can actually be accomplished at home with spare-time work. Her insight and judgment enabled her to size up the Auto-Knitter offer quickly and decide promptly. Not everyone makes as much with the Auto-Knitter as Mrs. Unger because not every one devotes as much time and energy to the work, but women everywhere are solving the "extra money" problem in this way without leaving their homes. Men, too, are making money with the knitter in spare time. Why shouldn't you do likewise?

Perhaps you haven't even as much spare time as Mrs. Unger. It may be that you can devote only a few moments at a time to the work. But, as Mrs. Unger points out, you can pick up the work any time, knit as long as you wish, and leave the machine when it is necessary to do something else. Auto-Knitting will pay you directly in proportion to the time you spend at it.

Briefly and briefly here is our proposition: The Auto-Knitter Hosiery Company enters into an agreement to buy all the standard socks you knit on the Auto-Knitter, and send in to them, paying a fixed guaranteed price. Checks will be sent promptly for each lot. Replacement yarn is also furnished for every shipment you send in. Thus you have yarn to work up into more socks.

Previous experience in hand-knitting is not necessary. Inexperienced persons can learn to turn out standard "Olde Tyme" wool socks, with the aid of the Auto-Knitter. And the machine operates many times faster than even the most skilled hand-knitter.

The Auto-Knitter comes to you with a sock already started in it. Then, too, there's a complete instruction book that makes everything plain. And as you operate the machine you are earning money to buy pretty things to wear, new furnishings for the home—and whatever else you may be needing.

Write To-Day for Our Liberal Wage Offer

Of course you want to know more about the wonderful little machine that helped Mrs. Frank Unger make her dreams come true; the machine that has done so much for other women.

Send right away for the company's free literature and read the experiences of other Auto-Knitter owners. Find out about the pleasant and profitable money-making opportunity offered you.

Remember what Mrs. Unger said just a few short months ago—"At any rate I can't lose anything by finding out what they have to offer!" She lost no time in getting the facts. You are in her position to-day. Will you follow her example?

Just write your name and address in the space below. THE AUTO-KNITTER HOSIERY CO., INC., DEPARTMENT 6322-M, 630-632 GENESEE STREET, BUFFALO, N. Y.

The Auto-Knitter Hosiery Co., Inc.

LEARN DRESS DESIGNING

Erie, Pa.

FRANKLIN INSTITUTE, Rochester, N. Y.

GENTLEMEN: Your course is the ideal one for the amateur dressmaker who wants to become a real one.

I have two children and do my own housework. During my spare time, averaging about 3 or 4 hours a day about 4 days a week, I have been making dresses for my friends.

I have sewed a lot for slender women, because I was sure of a fitting, but was afraid to attempt anything over a 36. Just two weeks after receiving the model patterns, which accompanied the first lessons of your course, a stout lady, size 44 bust, insisted that I design and make a velour suit dress for her.

To make a long story short, when the dress was finished, I had spent 25 hours on it, 6 of which was on the embroidery, done in two shades. I wanted to discourage her coming back, so I charged her $25. She was surprised and said she never expected it to be less than $35.00.

Since taking this course I have been charging $1 per hour and have all the work I can do for several months.

Following your instructions last week, I designed and draped a black charmeuse dress, trimmed in jet. Thanks to the instructions, it was a beautiful thing and a perfect fit.

Before enrolling with you, during spare times I made $75.00 in four months; since enrolling I have made $85.00 in two months. Respectfully yours,

STUDENT NO. 70885.

Any girl or woman, 15 or over, can easily learn Dress Designing and Making during spare moments at home

IN TEN WEEKS

Expert Dress Designers Earn From $50 to $200 a Week

Several thousand women have taken this course and now design and make their own gowns. They have three dresses for the money formerly paid for one.

Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real Teaching.*

One pupil has received over $5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over $1,000 before completing her first course. Another, a busy wife and mother, is averaging over $75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish **The Writer's Library**, descriptive booklet free. We also publish **The Writer's Monthly**, an indispensable magazine for literary workers, sample copy 25c. Besides our teaching service, we offer a manuscript criticism service.

150-page illustrated catalogue free.

New Discovery Takes Off Flesh Almost "While You Wait"

A pound a day the very first week without medicine, special food starving or exercise. Results in 48 Hours!

AT last a simple secret has been discovered by a great food specialist which enables you to eat a pound a day off your weight with perfect ease. In fact, you will enjoy your meals as never before.

Scores of men and women who have tried strenuous diets. medicine and violent exercising without results have found this new scientific way a revelation. A pound or more a day from the very start is not too much to look for, and with each pound you lose you will note a corresponding increase in energy and general health.

Women so stout they could never wear light colors or attractive styles without being conspicuous marvel at the change that has enabled them to wear the most vividly colored and fluffily-styled clothes. Men who used to puff when they walked the least bit quickly—men who were rapidly becoming inactive and sluggish — unable to enjoy outdoor exercise or pleasures, find their youthful energy returning—to their surprise and delight.

Read What Others Say

Lost 28 Pounds in 30 Days.

"I found your instructions easy to follow and your method delightful. In 30 days I lost 28 pounds—8 pounds the very first week. My general health has been greatly benefited.

(Signed) Earl A. Kettel,
225 W. 39th St., New York City."

Reduces 74 Pounds.

"I weighed 240 pounds up until the time I sent for your remarkable booklets. When I followed your method I lost 10 pounds the first week and was soon down to 166 pounds (74 pounds reduction). Now I can even run upstairs. I never felt better in my life. And I now have a fine complexion, whereas I used to be bothered with pimples.

(Signed) Mrs. Mary Denneny,
62 West 9th St., Bayonne, N. J."

Loses 36 Pounds.

"Before I adopted your method of Weight Control I weighed 190 pounds. I reduced to 154 pounds in a few weeks and am still reducing. I feel better than I ever did before. Before reducing I was always tired. Now I can walk 6 miles and feel no ill effect. My complexion has wonderfully improved also.

(Signed) (Miss) Anna Queenan,
5570A Vernon Ave., St. Louis, Mo.

Above are just a few of the hundreds of letters on file in our office. Nearly every letter we receive first mentions the quick reduction of weight and then states that this reduction is accompanied by better health and improved complexion. This new discovery is the safe, quick, easy, natural way to reduce.

How the Secret Works

The whole thing about this wonde new way to reduce, which makes lo flesh a pleasure instead of a task, simple system of food combination covered by Eugene Christian.

Some of us eat that is almost imm ately converted muscle, bone and sue. Others eat that is quickly verted into useles In this latter cas muscles, bones tissue are robbe just so much nutr and strength. Th why fat people but little resist and succumb fir case of illness.

Eugene Christia famous Food Sp ist, while engag one of his exte food experiments covered the p cure for the "d of obesity," as he it. He found merely by follo certain little n laws food is con into essential and muscle, whil enough fat is sto to provide the sary body heat. with his discove what it would to thousands o and women, Ch has incorporate his valuable inf tion in the form tle easy-to-follo sons under the of "Weight Co the Basis of H which is offer free trial.

There are no fads in this course, no starving, no medicines, no exercises—nothing but pure common sense, practical help that will do just what we say—take off flesh almost "while you wait." Eat many of the delicious foods you may have been denying yourself, observing, of course, the one vital rule. Do pretty much as you please, give up all bitter self-denials and exercises—just follow the directions outlined in Christian's wonderful course, and watch your superfluous weight vanish.

Nothing Like It Before

You never tried anything like this new method of Eugene Christian's before. It's entirely different. Instead of starving you, it shows you how to eat off weight—a pound of it a day! No trouble, no fuss, no self-denial. All so simple that you'll be delighted—and amazed.

Here's what Christian's course in Weight Control will do for you: First it will bring down your weight to normal, to what it should naturally be. Then it will make your flesh firm and solid. It will bring a new glow to your cheek, a new sparkle to your eyes, a new spring to your step. It will give you charm, grace, attractiveness. And all naturally, mind you! Nothing harmful.

We want you to prove it yourself. We want you to see results, to see your own unnecessary flesh vanish. We want you to see why all starving, medicines and strenuous exercises are unnecessary—why this new discovery gets right down to the real reason for your stoutness and removes it by natural methods.

No Money in Advance

Just put your name and address on the coupon below. Don't send any money. The coupon alone will bring Eugene Christian's complete course to your door, where $1.97 (plus postage) to the postman will make it your property. If more convenient you may remit with coupon, but this is not necessary.

As soon as the course arrives weigh yourself. Then glance through the lessons carefully and read the startling revelations regarding weight, food and health. Now put the course to the test. Try the first lesson. Weigh yourself in a day or two again and notice the wonderful result. Still, you've taken no medicines, put yourself to no hardships, done practically nothing you would not ordinarily have done. It's wonderful—and you'll have to admit it yourself.

Mail the coupon NOW. You be the sole judge. If you do not see a marked improvement in 5 days return the course to us and your money will be immediately refunded. But mail the coupon this very minute, before you forget. Surely you cannot let so positive an opportunity to reduce to normal weight pass by unheeded.

The shadow of her former self—result of the new discovery!

Remember, no money—just the coupon. As we shall receive an avalanche of orders for this remarkable course, it will be wise to send your order at once. Some will have to be disappointed. Don't wait to lose weight, but mail the coupon NOW and profit immediately by Eugene Christian's wonderful discovery.

The course will be sent in a plain container.

Corrective Eating Society, Inc.

Dept. W-13822, 43 West 16th St., New York City

CORRECTIVE EATING SOCIETY, Inc.
Dept. W-13822, 43 West 16th St., New York City

You may send me, in plain container, Eugene Christian's Course, "Weight Control—the Basis of Health," in 12 lessons. I will pay the postman only $1.97 (plus postage) in full payment on arrival. If I am not satisfied with it I have the privilege of returning the course to you within 5 days. It is, of course, understood that you are to refund my money if I return the course.

How Would You Like to Earn $83 a Day?

The true story of J. F. James, the shipping clerk who became president of a great manufacturing company. What was the secret of his success?

By Richard W. Samson

THE other day I spent a few precious hours with Mr. J. F. James, President of the Mascot Stove Manufacturing Company, of Chattanooga, Tennessee.

Fifteen years ago he was working as a shipping clerk in a stove foundry for $9 a week. Today he is making $25,000 a year, or $83 a day. As Mike Murphy, the famous trainer, used to say—"You can't beat a man who refuses to be beaten."

J. F. JAMES
Just 40 years old and earning $25,000 a year.

Few men have started with as barren prospects as J. F. James. Born in the mountains of Tennessee, forced to leave school as a boy and go to work, he might easily have fallen into the rut and stayed there.

But one day, glancing through a magazine, he came across an advertisement which appealed to him so strongly that he read it twice and then tore it out of the magazine to read again.

It told how thousands of other men had won promotion through spare-time study. How they had trained themselves to do bigger things! How they were ready when Opportunity came!

THAT day J. F. James made a resolution. He said that what others were doing, he could do! So he tore out that familiar coupon, marked it, signed it, and mailed it to Scranton. Though he did not fully realize it at the time, he had taken the first step along the Uproad to Success.

So it came about that J. F. James studied while other men wasted their time loafing or watching the clock. They are still doing it today—worn, discouraged men who cry out that Fate is against them and that "they never had a chance."

Doomed forever to small wages, fighting a losing fight against poverty, missing the good things of life, they cannot understand how James got ahead.

"I didn't make a drudge out of myself," said Mr. James. "I had time for baseball and everything that seemed worth while. I had just as much fun as the other fellows, but instead of wasting time, I turned it into gold through my International Correspondence Schools course.

"Every hour I invested in study has paid me better than any other investment I ever made.

"It has brought me a large income—the satisfaction that goes with success—the money to buy anything I want—a good home and an automobile for my wife and children—the esteem of all my friends. The I. C. S. made my success possible."

How much longer are you going to wait before taking the step that will bring you advancement and more money? Isn't it better to start now than to wait five years and then realize what the delay has cost you?

Here is all we ask:—Without cost, without obligating yourself in any way, mark and mail this coupon. It takes only a two-cent stamp and only a minute of your time, but it is the most important single thing you can do today! Do it right now!

BROMO-SELTZER

FOR HEADACHES

Could YOU Talk to These Men? Or Any One of Them?

Could you read one of their letters? They speak only their mother tongues—French, Italian, and Spanish. Yet in social circles and in business, when travelling and at home, here and abroad, there are countless opportunities for you to gain the strong friendship of these nationalities for your pleasure, profit, and personal advancement. What you most need is a knowledge of at least one of these foreign languages. And through our remarkable system of instruction—

You can learn a new language as easily as a new tune

Only a trained musician can learn a tune without hearing it—by merely studying the printed notes. But any one can learn a tune by listening to it several times. It is the same with languages. The Rosenthal Language Phone Method enables any one to learn a foreign tongue as easily as a new tune. You merely put a Language Phone record on your phonograph and listen; then repeat the sentences aloud. In a surprisingly short time you are yourself actually speaking a foreign language and understanding what is said to you.

LANGUAGE PHONE METHOD

(Title Reg. U. S. Patent Office)

With Rosenthal's Practical Linguistry

The feature that makes this wonderful method so speedy, interesting, and correct is the set of Language Phone discs. These are records of the speech of a cultured native professor, speaking his mother-tongue. He talks of everyday matters, giving you hundreds of phrases, questions, and answers that you will have immediate and constant use for. You learn conversationally. No rules or declensions to be memorized, but perfect accent, pronunciation, and grammar assured.

SPANISH—FRENCH—ITALIAN

You need give only a few minutes of spare time a day to study—in the privacy and comfort of your own home. Select your own time—when you are in the mood. No arbitrary lesson-hour or waiting teacher to consider.

Whether you are an employer or employee, man or woman, boy or girl, clerk, executive, salesman, manufacturer, wholesaler, retailer, lawyer, doctor, minister, teacher, author, artist, actor, musician—familiarity with another language will add to your success—as it has done in thousands of cases. Hundreds and hundreds of owners of Rosenthal Language Phone outfits, in all these professions, have written us enthusiastic letters about their interest and pleasure in this fascinating study; and of the great benefit it has been to them—enlarging their business or winning promotion and bigger salaries.

FREE A 64-Page Book That Tells You

How to Increase your Income; How to Acquire Quickly Conversational Fluency in a Foreign Tongue; How to Increase Your Influence—in the office, the club, the drawing-room.

What's the Matter With You Mr. BOOKKEEPER?

Most bookkeepers KNOW THAT OPPORTUNITY AWAITS THEM IN ACCOUNTANCY. Are you indifferent to study? Do you think that accountancy is too difficult to master? Don't you want to climb higher? You know, or can easily find out, that accountants earn from $3,500 to $15,000 per year. You know that you can easily build up your bookkeeping knowledge into C. P. A. proportions. This can be done in ONLY six to eight months of fascinating study in the higher branches of accountancy.

Every Bookkeeper Can Easily Be An Accountant 8 MONTHS FROM TODAY

Many bookkeepers have increased their salary in less than 8 months by entering the field of accountancy. They simply built up their bookkeeping knowledge through the home-study instruction given by the Universal Business Institute. Here are but two letters from thousands of our successful students who quickly became accountants.

"I was receiving a salary of $110 per month. The last position I held paid me a salary of $300 per month as Chief Accountant in charge of 110 men."
—G. H. SCHOFIELD, Richmond, Va.

"Since I began your course my salary advanced more than 60 per cent."
—L. A. THEISEN, Jersey City, N. J.

Let the Universal Business Institute prepare you for any one of the professions named below. Write for FREE BOOKLET. "Eight Professions — and Their Opportunities," and mention the subject which particularly interests you.

- Salesmanship
- Brokerage
- Banking
- Advertising
- Real Estate
- Credit Manager
- Corporate Secretary
- Business Organizer

What They Have Done You Can Do

Just as these successful men studied in their own home, so can you master accountancy during your spare hours.

Our easy system of teaching by mail is individual and your progress is watched even more closely than if you were in a class with others who might not be so quick to master the subjects as yourself. You receive instruction under the guidance of men who are actually engaged in Certified Public Accountancy, Law, Cost Accountancy, and Business Systematizing. Through our system of instruction your lesson papers are given the personal and sympathetic attention and understanding which eliminates the objection to machine-like correction, stereotyped question and answer papers, and the turning out of instruction as though it were so much paper.

Because our methods of instruction are FREE from the entanglements of red-tape theory—are thorough, resultful and practical in every way, it is not marvellous that our students have climbed into high positions and big salaries in the field of accountancy.

The Universal Business Institute was organized in 1904 and has prepared more than 40,000 men and women for successful careers.

How You Can Have Prettier Dresses at Half the Cost

By Marjorie La Mar

I WANT to tell you about a new and wonderfully simple plan by which you can now learn right at home in spare time to make all your own and your children's clothes.

I want to tell you how you can not only have more and prettier dresses, suits and hats, but how you can save at least one-half of what you are now spending.

Does it sound almost too good to be true? Then, let me tell you about the Woman's Institute—the great school which is bringing the joy of better clothes at substantial savings to women and girls all over the world.

You say that you cannot sew a stitch or that you sew only a little? No matter! The Institute's courses begin with the very simplest stitches and seams and proceed by logical steps until you learn the whole art of dressmaking—the designing, cutting, fitting and construction of garments of every kind.

The courses are so complete and practical that hundreds of students with absolutely no other preparation have opened shops of their own and enjoy large incomes and independence as professional dressmakers and milliners.

Best of all, you are not asked to spend long weeks on practice work. You begin almost at once to make actual garments. No matter where you live—no matter what your age or position in life, if you can be reached by the mails, you can learn dressmaking and millinery at home through the Woman's Institute.

Aren't you glad to know that at last you can have those pretty clothes for which your heart has been longing all these years? And wouldn't you like to have the full story of the school and the method that have made this possible? The way to get it is easy.

Send for Handsome Booklet

It costs you nothing to find out all about the Woman's Institute and what it can do for you. Just send a letter, post card, or the convenient coupon and you will receive, without obligation, the full story of this great school that is bringing to women and girls all over the world the happiness of having dainty, becoming clothes, savings almost too good to be true, and the joy of being independent in a successful business.

Your Bunion Can Be Cured
INSTANT RELIEF
Prove It At My Expense

DON'T SEND ME ONE CENT—just let me prove it to you, as I have done for over 72,500 others in the last six months. I claim that **"FAIRYFOOT"** is the only successful cure for bunions ever made and I want you to let me send it to you FREE, entirely at my expense. I don't care how many so-called cures, or shields or pads you ever tried without success, I don't care how disgusted you feel with them all—you have not tried my cure and I have such absolute confidence in it that **I AM GOING TO SEND YOU THIS TREATMENT ABSOLUTELY FREE.** It is a wonderful yet simple home treatment, which relieves you almost instantly of all pain; it removes the cause of the bunion and thus the ugly deformity disappears—all this while you are wearing tighter shoes than ever. I know it will do all this and I want you to send for **"Fairyfoot" FREE** because I know you will then tell all your friends about it just as those 72,500 others are doing now. Just send your name and address and "Fairyfoot will be sent promptly. **FOOT REMEDY CO., 2207 Millard Ave., Dept. 144, Chicago.**

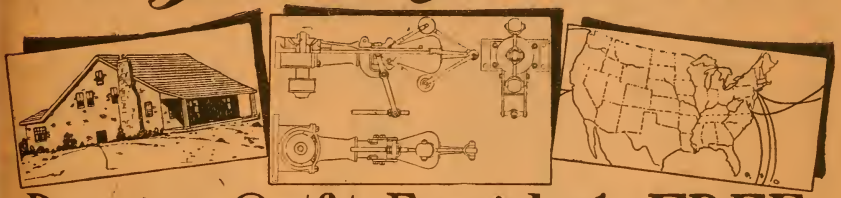
MAJOR MANUFACTURING CO., New York

Easy to Get $35 to $100 a week Making Drawings like these



Drawing Outfit Furnished *FREE*

You need no artistic talent or "pull." In a few months with our help you can be alongside the best of them, earning enough money to live on and to lay some aside.—Here's how.

Learn Mechanical Drawing

That means Big Money for you, Shorter Hours, Quick Promotion. The real opportunities for success in Mechanical Drawing today are big as compared with other fields. Mechanical Drawing or Drafting is specialized knowledge. It is power to succeed.

Big Salaries

$35 to $55 a week is only a beginning. $100 a week and up is within your grasp as a practical Mechanical Draftsman.

Quick Promotion

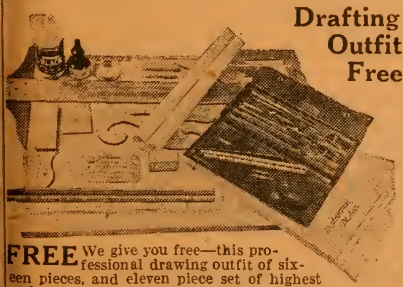
You can climb up and up in salary and position—from Draftsman to Chief Draftsman—to Chief Engineer—to Production Manager—and so on up. You can also make big money on the side in your spare time, in addition to your regular salary. Then, when the opportunity comes, you can go into business for yourself, as many others have done.

Permanent Employment

You won't have to stand around looking for a job. Properly trained draftsmen are always in demand. Railroads, Manufacturing Plants, Electrical Works, Engineering and Construction Houses and United States Government Departments always need trained draftsmen. Even when men in other lines of work are without positions, the draftsman is usually on the job at good pay.

Get the Right Training

"Columbia" training is simple and sure, yet complete and practical. By Roy C. Claflin's improved "Columbia" method of practical, Mechanical Drawing you can become a master Mechanical Draftsman in a few months of pleasant, easy home study, under Mr. Claflin's personal supervision. No troublesome, fancy theories—no difficult mathematics to master—just the plain, commonsense brass tacks of Drafting. And after that, if you want it, you receive free training in a specialized branch of drafting through your choice of one of our post-graduate courses.



Drafting Outfit Free

FREE We give you free—this professional drawing outfit of sixteen pieces, and eleven piece set of highest grade drafting instruments in plush lined case. The entire outfit is yours to keep.

"Columbia" Draftsmen Are in Demand

The largest concerns in the country, including the United States Government, employ Columbia trained draftsmen. Openings for draftsmen in Government Departments carry starting salaries ranging from $5.20 to $15.04 per day—and it is generally recognized that salaries outside of government service are still higher.

FREE BOOK

Send in this coupon today. Immediately upon receipt of it we will send you our illustrated book, "Your Future in Drafting." It tells you all about our new method of teaching Mechanical Drawing and gives full details of our offer.

SPECIAL OFFER TO THOSE WHO REPLY PROMPTLY. GET STARTED NOW.

YOU HAVE A BEAUTIFUL FACE

BUT YOUR NOSE?

BEFORE AFTER

IN THIS DAY and AGE attention to your appearance is an absolute necessity if you expect to make the most out of life. Not only should you wish to appear as attractive as possible, for your own self-satisfaction, which is alone well worth your efforts, but you will find the world in general judging you greatly, if not wholly, by your "looks," therefore, it pays to "look your best" at all times. **Permit no one to see you looking otherwise;** it will injure your welfare! Upon the impression you constantly make rests the failure or success of your life. Which is to be your ultimate destiny? My latest **Nose-Shaper, "TRADOS MODEL 25", U. S.** Patent, with six adjustable pressure regulators and made of light polished metal, corrects now ill-shaped noses without operation, quickly, safely and permanently. Diseased cases excepted. Does not interfere with one's work, being worn at night.

Write today for free booklet, which tells you how to correct ill-shaped noses without cost if not satisfactory.

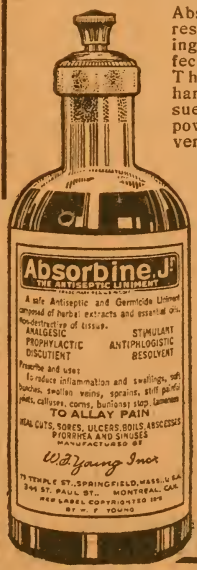
For Swollen Veins

Absorbine, Jr.

THE ANTISEPTIC LINIMENT

TRADE MARK REG. U.S. PAT. OFF.

IT was not known to us that Absorbine, Jr., would relieve swollen veins until a few years ago. Then we did not find this out for ourselves. The discovery was made by an old gentleman who had suffered with swollen veins for nearly fifty years. He had made many unsuccessful efforts to get relief and finally tried Absorbine, Jr., knowing its value in reducing swellings, aches, pains and soreness. Absorbine, Jr., relieved him. He told us that after he had applied Absorbine, Jr., regularly for a few weeks his legs were smooth as when he was a boy and all the pain and soreness had ceased. Thousands have since used this antiseptic liniment for this purpose with remarkably good results. Absorbine, Jr., is made of oils and extracts from pure herbs, and when rubbed upon the skin is quickly taken up (absorbed) by the pores; the blood circulation in surrounding parts is thereby stimulated and healing helped.



Absorbine, Jr., leaves no residue, the odor is pleasing and the immediate effect soothing and cooling. Though absolutely harmless to human tissues, Absorbine, Jr., is a powerful germicide, being very valuable in cleansing cuts, scratches, burns and other skin breaks liable to infection.

SPRINGFIELD, MASS.

I Will Tell You, Free, How to Reduce Your Weight

I was just a strong young woman, full of life and vigour, and fond of good things to eat, enjoying life to its fullest extent, when suddenly my weight began to increase, and strong as I was I began to feel the burden, especially as I am a business woman and have plenty of work to do. While my earthly self was rapidly assuming abnormal proportions, the progress in this direction brought sorrow and consternation, because I knew that I must give up business or reduce my weight. I began to feel lonely because I felt that my company was no longer desired, and I made up my mind that I was at the dangerous point of my life.

One day an inspiration came to me, after I had spent time, money and patience in vain efforts to become slim again. I acted upon this inspiration and succeeded, for 36 lbs. of ponderous weight vanished in five weeks. I did not use drugs, practice tiresome exercises nor starvation diet, nor wear any appliances, but reduced myself by a simple home method, and although this is some time ago, I have never gained any weight since, and my health is as good as I could wish.

You could reduce your weight the same as I have done, and I will tell you how, free, if you will enclose four cents in stamps to pay postage.

Vapo-Cresolene

Est. 1879

The VAPOR TREATMENT for Whooping Cough and Colds

The time for Vapo-Cresolene is at the **first** indication of a **cold** or **sore throat,** which are so often the warnings of dangerous complications.

It is simple to use, as you just light the little lamp that vaporizes the Cresolene and place it near the bed at night.

The soothing antiseptic vapor is breathed all night; **making breathing easy,** relieving the cough and easing the sore throat and congested chest.

Cresolene is recommended for **Whooping Cough, Spasmodic Croup, Influenza, Bronchitis, Coughs and Nasal Catarrh.** Its germicidal qualities make it reliable protection against these diseases when epidemic.

It gives great relief in **Asthma.**

Cresolene has been recommended and used for the past forty years. The benefit derived from it is unquestionable.

Sold by Druggists. Send for Descriptive Booklet A

Try Cresolene Antiseptic Throat Tablets for the irritated throat, composed of slippery elm bark, licorice, sugar and Cresolene. They can't harm you. Of your druggist, or from us, 10c. in stamps.

Why Many Me
Are "Old at 40"

Some men of seventy are younger in vitality th
other men of forty. A common cause, perhaps the m
common cause, of loss of strength and vitality in men p
forty (and some of younger years) is PROSTA
GLAND DISORDER. Men whose lives have been
heartiest and most vigorous are not exempt from the
tacks of this disorder. We have published a little book cal

PROSTATOLOG

which will tell you much you wish to know about the pr
tate gland and its functions—and how a disorder may ca
sciatica, backache, painful and tender feet, disturbed sl
ber and other painful disturbances. It will tell you c
new and harmless method of drugless, home treatment t
has been used successfully by thousands of men in all
ating these troubles—a method that is being endorsed
prominent Physicians, Physical Culturists, Chiropract
Osteopaths and other leading health authorities. The b
will be sent free, without obligation, upon receipt of y
simple request.

Just fill in and mail
coupon. The book wil
sent you absolutely fre

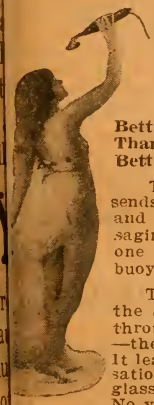
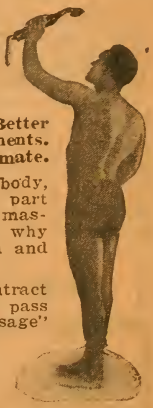
A Book on Perfect Health

Via Vi-Rex Violet Rays---FREE

Why Suffer from Impaired Health and Vitality?
Why Lose Your Good Looks and Energy?
Why Be the Victim of Ills and Ailments?



VI-REX VIOLET RAYS ARE THE BEST HEALTH INSURANCE



Better Than Medicine. Better Than Massage. Better Than Any of the Commonly Approved Treatments. Better Than Travel, Change of Air or Change of Climate.

The Violet Ray, as used in the treatment of the body, sends a spray of mild, tiny currents through every part and organ; flowing through each infinitesimal cell, massaging it, invigorating it, and vitalizing it. That is why one is left with such a delightful feeling of health and buoyant energy after Violet Ray treatment.

The Vi-Rex is not a Vibrator. It does not contract the muscles or shock the nerves. Its magic rays pass through every cell and tissue, "creating cellular massage"—the most beneficial electrical treatment known. It leaves no soreness after use, only a delightful sensation of agreeable relief. Violet Rays penetrate glass, yet are harmless even to infants. No shock. No vibration.

end for Free Book and Trial Offer

ke twenty Vi-Rex Violet Ray treatments in your own home. These treatnts would cost you $50 to $100 at your physician's or beauty specialist's, w, through our special liberal offer, you can try Vi-Rex Violet Ray treatnts without risking a penny. Use this wonderful machine, which attaches any lighting socket, for ten days. If you do not find quick relief, if you do t feel better, sleep better, eat better, look better, send it back and you will t be out one penny. Prove to yourself that Violet Rays bring you the gic of electricity in its most wonderful curative form. Simply mail the coupon or write a postal. Do it now, before our special trial offer is withdrawn.

Radio— Your Opportunity

The great and ever expanding industry of wireless communication offers unlimited opportunities for a pleasant, successful and secure future, if you are properly trained.

The Home Study Course of the Radio Institute of America will properly train you, right in your own home, as it has trained over 6,000 others during the past 15 years. Ninety-five per cent. of these graduates have successfully engaged in the field of radio communication and many of them have advanced to executive positions of responsibility and reaped the financial reward of a good salary and unequalled future opportunity.

The Radio Institute of America is closely affiliated with the Radio Corporation of America, which absorbed the Marconi Company and operates the famous world-wide wireless system.

Send for our booklet, "Radio, the New Field of Unlimited Opportunity."

LEONARD
EAR OIL

Relieves Catarrhal Deafness and Head Noises

Nine out of ten cases of Deafness and Head Noises are caused by catarrhal mucus (matter) in the Eustachian Tube, which connects the nose and the ears. Leonard Ear Oil removes the mucus, opens up the tube and the other air passages of the head, and the result is improved Hearing and relief from Head Noises. This is not put in the ears, but is rubbed in just back of the lobe of the ears and down along the glands of the throat and inserted in the nostrils, and "Common Sense Directions for Care of Hearing," which accompanies each bottle, tells you exactly how to take care of your own case. Do not be misled by substitutes or imitations. The only genuine "EAR OIL" is A. O. Leonard Ear Oil. It is the original and has been on the market since 1907, and every year it has relieved hundreds of people of their Ear Troubles.

Look for this sign in Drug Store Windows. It is a LEONARD EAR OIL AGENCY

How to Make a Hit with Influential People!

SOMETHING about Richard Bradley made him attract unusual attention wherever he went. You would instinctively pick him out of a crowd as worthy of note. In a gathering of any sort—at the club, at dinners or business meetings—the most important people present could always be found around Bradley, eager to make friends with him. And as for the ladies—well, to use a colloquial expression, they literally "threw themselves at him."

It wasn't Bradley's physical appearance or the way he dressed or acted that caused him to attract such favorable attention. In these things he was not unlike other men. But there was a vividness and charm about him which you felt the moment you saw him; and in his eye was the glint of steel acquired only by men who are doing things in a big way.

Yet he had started life as an errand boy with a grammar-school education. And now at 29 years of age he was making $12,000 a year in a keenly-competitive business in which none but mature men of high education were supposed to be able to succeed.

BRADLEY and I saw each other often, and, naturally, I valued his friendship highly. One day he dropped in to see me with a "tip" on a big job he said I could get if I'd go after it. It *was* a big job—right in my line—but I felt it was altogether too big for me at that time. I doubted if I could get it; and even if I could, I didn't see how I could possibly be worth the large salary it paid. As I told this to Bradley a look of surprise, then of utter amazement, flashed across his face.

"Too big for you!" he exploded "what nonsense! *Nothing is too big,* too important, or too good for you—for anyone else. Get that foolish no sense out of your mind. The reas why you and lots of other fellows are getting more money is *because you the world bluff you.* You've already g the ability—much more than many m holding high positions—but *you have yet learned the knack of making peo pay you big money for it."*

Bradley then told me some *astonishi things* about men and women, life, bus ness and the world in general. I w utterly astounded at what he said. seemed as though a curtain had sudden been lifted from my eyes and I cou now see clearly for the first time. Th he drew his chair close to mine and to me a mental knack to use in deali with people so as to *immediately destr any advantage they have over you, a to gain the advantage yourself.*

"And now," continued Bradley, in tone of friendly command, "telepho to the man I told you about and a for an appointment."

I SAW my man the following day, a *did exactly what Bradley told me do both before and during the inte view. And I got that job!* Yes, actual landed a job I was afraid to tack until Bradley told me such astonishi things. You can well imagine my d light! It pays me *three times more tha I ever thought myself capable of ear ing!* All my friends are wondering ho I did it! I've the satisfaction of know ing I'm making good in a big way—g it straight from the president at lunch eon. If it hadn't been for Bradley I still be asleep in a rut letting the worl bluff me out of money which is right fully mine. *But now I know the knac of getting big money!*

WHAT Bradley told me was this: "You know that until recent generations our ancestors, as a race, were oppressed, exploited and *held down* by the governing classes. They were *stuffed* into believing that kings and the ruling classes were infinitely *better* and altogether *superior* to them. The ruling classes forced this *bluff* on the people by means of artificial standards of society, and a lot of flub-dub magnificence. Today you and the rest of us laugh at this. We know it to be *bunk*. But just as we inherit our type of body, so do we *inherit* a *state of mind*. Our ancestors had a high respect for—*even fear of*—people in authority. Recent researches in psycho-analysis have shown that even today most of us have an *undue respect for, or actual fear of*, people in positions of authority. We may not realize it. *Unconsciously* we may not have this fear; but, nevertheless, we have it—planted deep in our subconscious mind—*inherited from our ancestors.*

That is why so few people get the rich rewards they are entitled to. They know they are worth more money, but they dislike to face the boss. They know they have the ability to hold a bigger job, but lack the know-how and the nerve to get it. *Tens of thousands of natural-born money makers and leaders of men are today held down in underpaid jobs simply because they are bluffed by other men.* And many splendid men and women find themselves unable to enter high social circles, simply because of an *inferior state of mind.*

But there's a simple way to *quickly overcome* this inherited handicap," continued Bradley. "It will not only wipe out your fears, but give you *invincible courage, dash and intrepidity* which keeps everything before it and makes people view you with amazed admiration. It will enable *you to dominate* other people instead of being dominated by *them.*"

I then he told me the *actual methods* I use—the methods which enabled me to win and hold my big job which pays *three times more than I ever thought myself capable of earning.*

Startling Revelations!

THE whole of these astonishing facts, with *all the powerful methods*, are clearly and fully told in "NERVE," a remarkable 6-volume, pocket-size Course by William G. Clifford. That is where Bradley got his information which enabled him and his friend to accomplish such remarkable things. Within one hour after you start to read this astonishing Course your eyes will be opened as they never were opened before! There is nothing to laboriously study or learn. You can apply *at once* the powerful methods it gives you—methods which will *immediately* thrill you with invincible courage and give you *great power* over men and women and the world at large.

How to—

—gain the self-assurance that strongly impresses people;

—overcome nervousness in meeting people;

—meet and deal with "big" people as easily as you do your closest friends;

—quickly develop an impressive, winning personality;

—dominate and control people;

—prevent people from outwitting you;

—quickly get a substantial raise, promotion or anything you especially want;

—use the secret of making big money to bring you quick results;

—make people look upon you as a "winner";

—intensify your knowledge and skill, without further study, to make it bring you substantial and quick rewards;

—win your way into the highest social circles.

Fill in the coupon. Mail it to us with only one dollar. The complete Course "NERVE," in six attractive pocket-size volumes, goes to you immediately, all charges prepaid. Your money back instantly if you're not satisfied.

You have always wanted to know how to *forcefully assert yourself* to command respect from other men; how to meet the biggest business and social leaders with the *impressive manner* that wins their admiration, how to *feel at ease* under all conditions; how to know if the other man is *bluffing you* and how to quickly *turn the tables on him.* All these things and more—*including the secret of making big money*—are clearly and specifically told in "NERVE," as you will quickly see to your great profit and delight.

We may be compelled to withdraw this remarkable offer at any moment, so it is suggested that you get "NERVE" *now—before it is too late!*

5,000 SUFFERERS TO GET FREE TRIAL PLAPAO

STOP WEARING A USELESS TRUSS

Grand Prix awarded at Paris

Yes, stop it. You know by your own experience it is only a make-shift, a false prop against a collapsing wall, and that it is undermining your health, because it tends to retard the circulation of the blood. Why, then, continue to wear it? Here is a better way, which you can now prove for yourself, free of charge.

STUART'S PLAPAO-PADS are entirely different—being medicine applicators made self-adhesive purposely to prevent slipping and to hold the distended muscles securely in place. No straps, buckles or springs attached. No "digging in" or grinding pressure. **Soft as Velvet—Flexible—Easy to apply—Inexpensive.** Continuous day and night treatment. Not merely mechanical support. No delay from work. Hundreds of people, old and young, have gone before officers qualified to acknowledge oaths, and swore that the PLAPAO-PADS cured their Ruptures—some of them most aggravated cases—and of long standing.

Reduced Fac-Simil Gold Med awarded at Rome

Send To-Day For Free Test

Make a personal test of its value. Send no money, for the Free Trial Plapao costs you nothing, it may bring you a Health Restoration more precious than much fine gold. Accept this free "T Treatment" to-day and you will be glad you took advantage of this opportunity as long as you li Write a post card or fill out the coupon to-day, and by return mail you will receive the free trial Plap with a copy of Mr. Stuart's 48-page book on Rupture, containing full information. No charge for t now or ever. Nothing to be returned. You obligate yourself in no way. "Be wise to-day, 'tis ma ness to defer." Address, **PLAPAO CO., 343 Stuart Bldg., St. Louis, Mo.**

NEW SECRET IN JUJITSU
MAKES YOU MASTER OF MEN

A Score of Secret Grips Never Before Published
Now Clearly Revealed by Capt. Smith

YOU are more than able to take care of yourself if you know Jujitsu. In any emergency you become a panther-like fighting machine that is best left alone.

If you are strong you are able to use your strength to better advantage.

If you are weak physically you may overcome a giant who knows how to use his muscles only as a brute.

A woman equipped with this science no longer at the mercy of a ruffian or bully, but is able to defend herself effectively and is able to retain her presence of mind.

Jujitsu teaches you how to utilize 100 per cent. of your strength and put your opponent in such a position that he can use only 20 per cent. of his strength. It teaches you how to throw and handle stronger men than yourself with ease. Whether your opponents are armed with gun, club or knife, they are helpless against your science.

Japanese teachers do not give the underlying secret of Jujitsu when explaining a throw or trick. They teach the use of arms, legs, hips and shoulders, but do not reveal the basis of the whole science. It is therefore an average of ten years before a student of Jujitsu masters the science. Jujitsu is not done with the strength of the arm and leg and it is because of the failure to grasp the underlying principles that it takes so long to master the art.

What Would You Do?

—If a man grabbed you from behind?

—if he seized you ABOVE the arms?

—if he seized you BELOW the arms?

—if he seized you around the neck?

—if he secured a Rear Strangle?

Captain Smith tells you just what to do to free yourself instantly in every case. He gives you the secret fair methods and also other means which you can use in case of need.

Reveals the Secrets of Jujitsu

"The Secrets of Jujitsu," written by Captain Allan C. Smith, for three years chief instructor of Jujitsu in the United States Army, reveals for the first time the underlying secrets of this remarkable science. Thousands of white men have tried to learn the art of Jujitsu, but Captain Smith has the reputation in Japan of being the only foreigner to really master its mysteries. In 1916 he won the "Black Belt"—a mark of great distinction and unassailable evidence of his supreme skill. He is the only citizen of the United States with the right to wear it. Thus the elusive secrets which Captain Smith discovered only after ten years of constant effort in Japan are imparted to you during your first ten minutes' study of his course.

Any man, woman or child can easily and quickly become expert in Jujitsu by this new method. All the holds, breaks, throws, defenses, blows, tricks and secret death holds are explained and fully illustrated in this wonderful new course. Yet the course is taught in such a manner that two people practicing together run no risks of injuring themselves.

253 Photographs

"The Secrets of Jujitsu" consist of 59 lessons profusely illustrated by 253 photographs contained in seven interesting books. It is the most recent and the most complete and authoritative course on Jujitsu ever published in this country. Each trick is illustrated by several actual photographs and these are so clear that any one can do the trick after seeing them. The photos are right on the same page so that the eye learns from the illustrations just what to do and how to do it. This makes it all amazingly simple and easy.

Captain Smith gives you right at the start the boiled down crystallized secret which you will agree is in itself worth more than the small sum asked for the entire Course. The publishers of this illustrated Course by Captain Smith are so absolutely sure that once you have a chance to examine and test out for yourself the wonderful secret tricks, you will find them to be just what you have always wanted, they have allowed me to make you the following offer.

Send No Money

Don't send a single penny. Merely mail the coupon and the complete course will be sent at once, all charges prepaid.

If you are not entirely satisfied send the course back any time within five days and you will owe nothing. On the other hand if you are as pleased as I know you will be, send only $5 in full payment. Mail Coupon today!

KOTALKO OFFICES, BF-294, Station X, New York

GENUINE DIAMONDS

You can now buy blazing, brilliant, sparkling, genuine blue white diamonds at a 40% discount from their former retail cash value. We have imported from the diamond cutters direct, a large quantity of fiery blue white diamonds which are selling at a 40% discount. This is the lowest price in this or any other city for equal quality. Why pay retail prices when you can buy from diamond importers at 40% discount?

ONE CARAT $195.00 =

¼ CARAT $ 48.75
½ CARAT $ 97.50
¾ CARAT $146.25

These diamonds are brilliant blue white. They are cut in the new improved American way with a wide spread of surface and they look much larger than their real weight. Each diamond is set in your choice of the above three 14-karat solid gold rings and is sold upon the distinct understanding and guarantee that if you can duplicate it in any other jewelry store for less than $325.00 per carat, we will refund every cent you paid, providing you return it to us within 30 days from date of shipment.

30 DAYS FREE TRIAL—10 MONTHS TO PAY

Select your ring, give your finger size and send your order for which ever size diamond you wish. We will send it to you on 30 days' free trial upon the guarantee that we will refund your money if you return the diamond within 30 days. Do not buy it unless you are immensely pleased in every way. A written diamond guarantee is sent with each diamond sold.

For 42 years we have been a strictly cash house, but to unload part of our $1,000,000.00 surplus stock, we will open charge accounts with honest people, giving them ten months to pay. If you wish the accommodation of a charge account, you pay a deposit of 20% when ordering the diamond and the balance in ten equal monthly payments. There is no charge for the privilege of a credit account.

WRITE FOR 128 PAGE BARGAIN CATALOG!

It contains the greatest collection of wonderful blue white diamonds, high grade watches and solid gold jewelry of all kinds that has ever been offered at such rock bottom wholesale prices. Every conceivable article in the jewelry line can be found in this beautifully illustrated, large sized catalog. Write for your copy and keep it for handy reference.

DIAMONDS : WATCHES : JEWELRY

Dazzling, brilliant, blue white, genuine diamonds, full of fire and sparkle, are offered free for your inspection. The greatest diamond bargains of a lifetime are sent for your approval. If you like the diamond, you pay for it. If you are not entirely satisfied, send it back and the trial will cost you nothing.

Get the catalog and see the watch section. Large ones; small ones; low priced; high priced; for the wrist or for the pocket; for the business man; professional man; railroad man; for mother, daughter, wife or sweetheart—hundreds and hundreds of them. Watches for everybody and every purse.

Thousands of other jewelry bargains are listed in this catalog. Everything in the jewelry line that you can think of, all sold at exceptionally low prices. Gifts for all occasions. Presents for all seasons. Jewelry for yourself or for your friends. All are listed in this beautiful catalog. Write for your copy.

$1,000,000.00 and 42 Years of Experience Are in Back of This Offer

B. GUTTER & SONS 170 NASSAU ST. DIV. 334 NEW YORK

New and Easy Way to Learn Music

Either Playing or Singing—Every Step Made Simple as A B C by Print-and-Picture Lessons That You Can't Go Wrong On.

Entire Cost Averages a Few Cents a Lesson.

How often have you wished that you knew how to play the violin or piano—or whatever your favorite instrument may be—or that you could take part in singing?

How many an evening's pleasure has been utterly spoiled and ruined by the admission "I can't sing," or "No, I am sorry, but I can't play."

At all social gatherings, some one is sooner or later sure to suggest music. When the others gather around for the fun, the one who can take no part feels hopelessly out of it—a wall flower—a mere listener and looker on.

Or those long and lonesome evenings at home when minutes seem like hours—how quickly the time would pass if you could spend it at the piano or organ—or in making a violin "talk" or in enjoying some other instrument.

And now—at last—this pleasure and satisfaction that you have so often wished for can easily be added to your daily life.

No need to join a class or pin yourself down to certain hours for lessons or practice. No need to pay a dollar or more per lesson to a private teacher. Neither the question of time nor expense is any longer a bar—every one of the obstacles that have been confining your enjoyment to mere listening have been removed.

My method of teaching music—in your spare time at home, with no strangers around to embarrass you—makes it amazingly easy to learn to sing by note or to play any instrument.

You don't need to know the first thing about music to begin—don't need to know one note from another. My method takes out all the hard part—overcomes all the difficulties—makes your progress easy, rapid and sure.

Whether for an advanced pupil or a beginner, my method is a revolutionary improvement over the old methods used by private teachers. The lessons I send you explain every point and show every step in simple Print-and-Picture form that you can't go wrong on—every step is made as clear as A B C. My method makes each step so easy to understand and practice that even children only seven to ten years old have quickly become accomplished players or singers under my direction by mail. Also thousands of men and women—including many who had never before tried to play any instrument or taken a lesson of any kind—have found my method equally easy. My method is as thorough as it is easy. I teach you the only right way—teach you to play or sing by note. No "trick" music, no "numbers," no makeshift of any kind.

I call my method "new"—simply because it is so radically different from the old and hard-to-understand ways of teaching music. But my method is thoroughly time tried and proven. Over 250,000 successful pupils—in all parts of the world, and including all ages from boys and girls of ten to twelve to men and women of sixty—are the proof. Largely through the recommendations of satisfied pupils I have built up the largest school of music in the world.

But I don't ask you to judge my methods by what I myself say. You can take any course on trial—singing or any instrument you prefer—and judge entirely by your own progress. If for any reason you are not satisfied with the course or with what you learn from it, then it won't cost you a single penny as outlined in our guarantee. On the other hand, if you are pleased with the course, the total cost averages a few cents a lesson, with your music and everything also included.

Learn to Play by Note
For Beginners or Advanced Pupils.

Piano	Cello
Organ	Harmony and Composition
Violin	Sight Singing
Drums and Traps	Guitar
Banjo	Ukulele
Tenor Banjo	Hawaiian Steel Guitar
Mandolin	Harp
Clarinet	Cornet
Flute	Piccolo
Saxophone	Trombone

Voice and Speech Culture.
Automatic Finger Control.

When learning to play or sing is so easy, why continue your enjoyment of music to mere listening? Why not at least let me send you my free book that tells you all about my methods? I know you will find this book absorbingly interesting, simply because it shows you how easy it is to turn your wish to play or sing into an actual fact. Just now I am making a special short-time offer that cuts the cost per lesson in two—send your name now, before this special offer is withdrawn. No obligation—simply use the coupon or send your name and address in a letter or on a postcard.

Crooked Spines Straightened!

NO matter how old you are: no matter what caused your affliction; no matter how many years you have suffered or how hopeless you believe your case to be, there is hope for you in the Philo Burt Method.

Eminent specialists who have studied and treated spinal diseases and deformities for years are first astonished, then convinced and quickly become enthusiastic upon finding one success follow another when the Philo Burt Method is used. Ask us for the names of happy patrons right in your vicinity.

A young woman who was bed-ridden at 26 with spinal tuberculosis after suffering for 20 years, is married, happy and perfectly strong and vigorous at 29.

A boy of 8 was unable to walk or hold his head erect. After a few months every symptom disappeared and he walks daily three miles to school.

A man of 45, in cruel agony for six years, spent over $3,000 in a vain search for relief. Now works every day without the aid of any artificial support.

FREE—30 Days' Trial

The Philo Burt Method is new and different, not like anything you have tried. It has benefited or cured over 30,000 sufferers from spinal trouble caused by tuberculosis, Pott's disease, infantile paralysis, spinal meningitis, pleurisy, rheumatism, injuries, wrong sitting and standing postures, etc. Treat yourself at home. A 30-days' trial costs you nothing; no obligations of any kind if it fails.

The Philo Burt Appliance will positively cure any case that is curable and straighten any crooked spine that can be straightened. It gives firmer and more natural support to the spine than any torturing, unsanitary, old style brace made of steel, iron, leather, plaster of paris, etc. It is as yielding, soft and comfortable as a corset. Goes on and off like a coat and cannot be detected under the clothing. It relieves and strengthens and has accomplished many amazing cures. Let us send you sworn proof. Send no money. Simply describe your case fully. Get our liberal offer and helpful book on spinal troubles absolutely free.

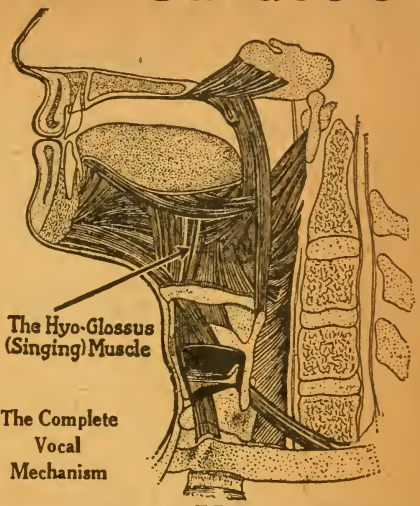
The Secret of Caruso's Greatness

Caruso's marvelous voice was due to a superb development of his Hyo-Glossus muscle. *Your* Hyo-Glossus muscle can be developed too! A good voice can be made better—a weak voice become strong—a lost voice restored—stammering and stuttering cured. Science will help you.



We Guarantee to Improve Your Voice 100%

You have a Hyo-Glossus muscle in your throat. Upon the state of its development depends the kind of a voice you have. By practicing Prof. Feuchtinger's simple, silent, muscular exercises in the privacy of your own room, you can positively develop a rich, beautiful singing voice, a strong, commanding speaking voice, or correct all defects in speech.

Your Money Back If Not Benefited 100%

You are the sole judge. If not satisfied that your voice is improved 100%, we refund your money. You take no chances. Run no risk of disappointment.

Professor Feuchtinger

Teacher of Great Opera Stars

In Europe Prof. Feuchtinger is famed for his scientific work in voice development by these same methods now offered you. Great Opera Stars have studied under him. Universities bid for his lectures. For three generations the name Feuchtinger has been famous.

Silent Practice in Your Home

These methods are perfectly adapted to correspondence instruction. Have faith in Prof. Feuchtinger and our money back guarantee. Give a few minutes each day to faithful silent practice. The results are certain. You will be amazed at the progress you make in a short time.

Send for Free Illustrated Book Today

YOU are invited to send today for Prof. Feuchtinger's great book. Free if you fill out the coupon below. Don't wait and perhaps forget—do it now.

$500.00 REWARD

FOR TWO HOURS' WORK

WARREN BIGELOW, the Finger Print Detective, was making his usual review in the morning newspapers. He had just finished reading the press reports of the daring robbery of the offices of the T— O— Company when the telephone on his desk rang. Central Office was calling asking him to come immediately to the scene of the robbery.

Although he drove his high powered roadster rapidly and arrived very shortly at his destination, he had plenty of time to consider the main features of the case as reported by the press. The job had undoubtedly been done by skilled cracksmen and robbers of uncommon nerve. Sixty-five hundred dollars in currency—the company pay-roll—were gone. Not a single, apparent clue had been found by the police.

Finger-Print Expert Solves Mystery

On his arrival, Bigelow was greeted by Nick Austin, Chief of Detectives, who had gone over the ground thoroughly.

"Well, Warren. Here's a job that has us stumped. I hope you can unravel it for us."

By this time the district officers and the operatives from Central Office had almost given up the investigation. After hours of fruitless efforts their work was at a standstill. They were completely baffled.

With lively interest and a feeling of relief they stepped back to await the results of the Finger Print Detective's findings. They were plainly awed at his quiet, assured manner. The adroit old Chief himself was manifestly impressed at the quick, sure way in which Bigelow made his investigation.

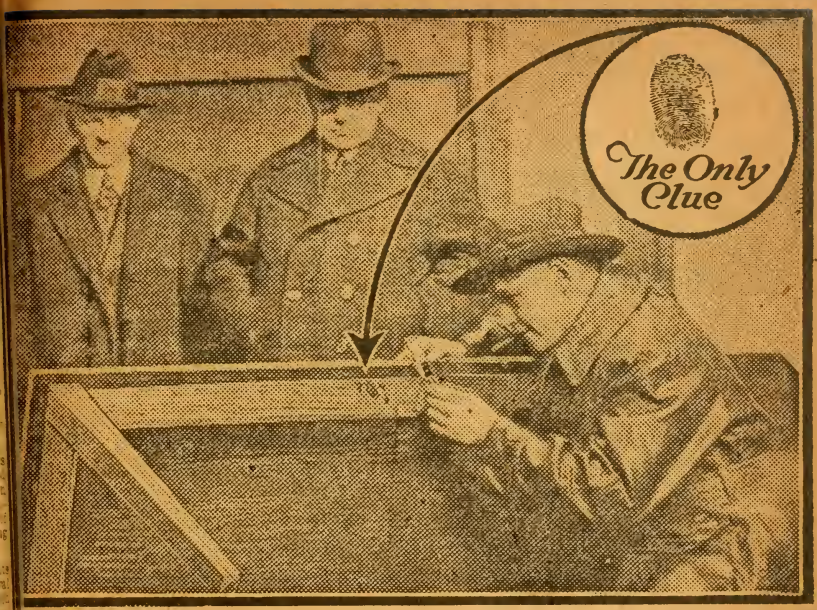
Almost immediately Bigelow turned his attention to a heavy table which had been tipped up on its side. Examination of the glossy mahogany showed an excellent set of finger prints. The thief might just as well have left his calling card.

To make a long story short, his prints were photographed and taken to Central Office, where they were matched with those of "Big Joe" Moran, a safe blower well known to the police. Moran was subsequently caught and convicted on Bigelow's testimony and finger-print proof. Most of the money was recovered. In the meantime the T— O— Company had offered a $500.00 reward, which was given to Bigelow—his pay for two hours' work.

Learn at Home in Spare Time.

Could you imagine more fascinating work than this? Often life and death depend upon decisions of finger-print evidence—and big rewards go to the Expert. Thousands of trained men are now needed in this great field. The finger-print work of governments, corporations, police departments, detective agencies and individuals has created a new profession. Many experts regularly earn from $3,000.00 to $10,000.00 a year in this fascinating game. And you can easily learn the secrets of this new Science in your spare time—at home. Any man with common school education and average ability can become a Finger Print Detective in a surprisingly short time.

Why Don't You Be a Finger-Print Expert?



ree Course in Secret Service

When BRANN Discovered the Shame of the World

Society was shocked at his merciless exposures. The guilty, branded with their infamy, hung their heads in dishonor. They cried out to stop him—they invoked the powers of earth to silence him. Alone he defied the world. Was he master of the passions of men that he could craze with hatred and hypnotize with love? What was this strange magic that held hundreds of thousands spellbound? Why did one man give his own life to take the life of Brann, the Iconoclast?

Age.....

He tore off the sham draperies of Virtue—snatched away the purple cloak of Hypocrisy—threw aside the mock mantle of Modesty—laid bare the blinding nakedness of Truth. With the fury of an avenging angel he hurled himself upon every fake and fraud of Christendom. With a boldness that outraged convention, struck terror to the hearts of the timid, blasted the lives of the guilty, he revealed the shame of the great and mighty, the rich, the titled, the powerful.

No influence was strong enough to encompass cleanly, fatally, Brann's downfall. For he wielded the power of words. He wove a pattern of words, and it breathed with life, shone with beauty, scintillated with satire. At his touch cold type kindled into fire, glowed with the red heat of wrath, blinded with the white flare of passion. With the genius of his pen he ruled the emotions of men, played upon the heart strings of humanity. Under his inspiration his pen became an instrument of destruction that wrought the crashing havoc of a cyclone—again it became as a scourge of scorpions that flayed into the raw—or again it was a gleaming rapier that pierced swiftly.

Fakes and Frauds Feared Him

They could not silence him—they could not stop him with power or money or threats. So they killed him. Oh, vain is death. For to-day Brann's flaming spirit again startles the world. At last the complete writings of Brann, the Iconoclast, have been collected and permanently preserved in book form. Here is a treat for the booklover, the thinker, the lawyer, the writer, the business man, the preacher—for everyone who loves a two-handed fighter.

Here is a veritable treasure trove of genius—here is a phenomenon of language such as the world has never seen before—nor ever will see again. If you would know the wizardry of words—the magic of expression—the power of language, then you will read eagerly every word that this master has written. If you would write and speak with facility—if you would mould words to your every thought and mood—if you would impress others with your opinions and convictions—if you would make your utterances breathe with life, kindle with spirit, glow with beauty, sparkle with wit, scintillate with originality—then you must have this great new edition of Brann.

Send No Money

Now you may have this beautiful twelve-volume set for five days' free examination. If, at the end of that time, you decide that you do not want to keep the set, you are at liberty to return it and the trial will not have cost you a cent. If you keep the set, as you doubtless will, pay for it on the amazingly easy terms shown on the coupon.

Mail Coupon

Each of the twelve volumes contains 320 pages, making a total of over 3,800 pages. Never before has so courageous a figure flashed across the literary horizon. A real treat is in store for you. Mail the coupon now. Address The Brann Publishers, Inc., Dept. 951, 130 East 25th Street, New York City, and the set will be shipped, prepaid at once, securely packed in a wooden box.

A Genuine Rupture Cure Sent on Trial to Prove It

Don't Wear a Truss Any Longer

After Thirty Years' Experience We Have Produced an Appliance for Men, Women and Children That Actually Cures Rupture.

The above is C. E. Brooks, inventor of the Appliance, who cured himself and who has been curing others for over thirty years. If ruptured, write him to-day at Marshall, Mich.

If you have tried most everything else, come to us. Where others fail is where we have our greatest success. Send attached coupon to-day and we will send you free our illustrated book on Rupture and its cure, showing our Appliance and giving you prices and names of many people who have tried it and were cured. It is instant relief when all others fail. Remember, we use no salves, no harness, no lies.

We send on trial to prove what we say is true. You are the judge and once having seen our illustrated book and read it you will be as enthusiastic as our hundreds of patients whose letters you can also read. Fill out free coupon below and mail to-day. It's well worth your time whether you try our Appliance or not.

Confederate Veteran Cured

Commerce, Ga., R. F. D. No. 11.
Brooks Appliance Co., Marshall, Mich.

Dear Sir—I am glad to tell you that I am now sound and well and can plough or do any heavy work. I can say your Appliance has effected a permanent cure. Before getting your Appliance I was in a terrible condition and had given up all hope of ever being any better. If I hadn't been for your Appliance I would never have been cured. I am sixty-eight years old and served three years in Eckle's Artillery, Oglethorpe County. I hope God will reward you for the good you are doing for suffering humanity.

Yours sincerely,
H. D. BANKS.

Others Failed but the Appliance Cured

Brooks Appliance Co., Marshall, Mich.

Dear Sir—Your Appliance did all you claim for the little boy and more, for it cured him sound and well. We let him wear it for about a year in all, although it cured him three months after he had begun to wear it. We had tried several other remedies and got no relief, and I shall certainly recommend it to friends, for we surely owe it to you.

Yours respectfully,
WM. PATTERSON.
No. 717 S. Main St., Akron, O.

Cured at the Age of 76

Brooks Appliance Co., Marshall, Mich.

Dear Sir—I began using your Appliance for the cure of rupture (I had a pretty bad case) I think in May, 1905. On Nov. 20, 1905, I quit using it. Since that time I have not needed or used it. I am well of rupture and rank myself among those cured by the Brooks Discovery, which, considering my age, seventy-six years, I regard as remarkable.

Very sincerely yours,
SAM A. HOOVER.
Jamestown, N. C.

Child Cured in Four Months

21 Jansen St., Dubuque, Iowa.

Brooks Appliance Co.

Gentlemen—The baby's rupture is altogether cured, thanks to your Appliance, and we are so thankful to you. If we could only have known of it sooner our little boy would not have had to suffer near as much as he did. He wore your brace a little over four months and has not worn it now for six weeks.

Yours very truly,
ANDREW EGGENBERGER.

Remember

We send our Appliance on trial to prove what we say is true. You are to be the judge. Fill out free coupon below and mail to-day.

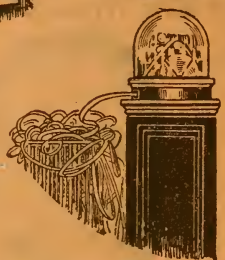
The Story Behind the WALL STREET Ticker

CLIP COUPON FOR FREE COPY



WHY do some people win fortunes in Wall Street, while others lose everything?

Why is it said of some men, "Everything he touches turns to gold," while others make no progress at all?

Many people will tell you that it is due to "luck," but if you will get the real facts you will generally find that luck had nothing whatever to do with it.

The Law of Successful Trading

Underneath the market action of every stock is a definite, vital reason. The Law of Action and Reaction applies forcibly to the Stock Market. The man who succeeds in making his money create **independence** for him is the man who studies fundamental conditions. He refuses to allow his judgment to be stampeded by "tips" and rumors. He never invests until he is familiar with those factors which will make his operations successful—**he gets the story behind the ticker.**

The Way Made Easy For You

There is a way whereby you too can become acquainted with these vital fundamentals. It is not necessary for you to burn the midnight oil studying dry statistics of trying to fathom lengthy financial reports. This work is all done for you, every week, by experts who have spent years in Wall Street, and the results are published in **"The Market Despatch,"** now being read by thousands of investors and traders.

This publication contains many suggestions as to how you might invest profitably. It analyzes industrial and financial conditions that might affect stocks you hold, and shows you how to understand the great, far-reaching factors that contribute to the advance or decline of the market, or of certain stocks.

Sent Free Upon Request

This carefully compiled, invaluable publication will be sent to you FREE if you will clip the coupon below and mail it to the publishers, Hamilton B. Wills & Co., Limited, 40 Exchange Place, New York City. Upon receipt, your name will be placed on the mailing list and copy sent you regularly, without obligation. The first copy may be worth hundreds of dollars to you.

Why not send for it now—while you have the coupon before you?

Clip Coupon Below and Mail To-Day.

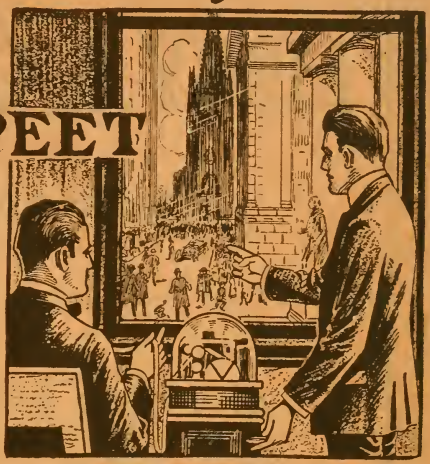
How I Learned The Money Making Secrets of WALL STREET



By GEORGE MERRILL

TWO years ago I didn't have $100 to my name. To-day I am on the high road to success and at the head of a thriving business. I have learned the wonderful secret of how to make money—big money. I own a luxurious home, drive a car that any man might be proud of, and my bank account runs into five figures. Great as my success has been, however, I feel that this is but a step, for I am safely on the road to a substantial fortune and getting nearer to it every day.

How I Did It

Like every ambitious young chap, I wanted wealth. The first year or two after Mary and I were married this desire fairly became an obsession, and I plunged feverishly into wild-cat stock speculations. I tried broker after broker, took advice from every "dopester" I met. Naturally I lost, and the more I lost, the harder I plunged. Finally, I went broke and had to quit.

Just then, when everything looked blackest, Mary's quick eye caught an advertisement of the well known New York Investment House, Hamilton B. Wills & Co., Ltd. The "ad" told of a wonderful booklet that would explain the secrets of Wall Street trading. I was skeptical but it sounded convincing to Mary, so we sent for a free copy.

I Learned the Great Secret

The booklet came. It proved to be the most wonderful story I have ever read. In a flash I saw my big mistakes. My whole series of blunders was made plain as day. I realized then that what I needed was a financial adviser and I knew that I had at last found a way to stop the leak that had nearly sunk us before.

With new life, new hope, Mary and I buckled down for a new start. When we had a few dollars saved, we wrote to Wills for advice. We got it promptly, and, as their suggestions seemed conservative and sound, we sent our first remittance that very day. Two weeks later we had our first real investment profit; but that was only the beginning. Next, this firm studied out a special, carefully analyzed investment plan for us and suggested how we might handle it. This venture was even more successful than the first. To make a long story short, I have made more progress in the last two years than during the previous ten. The luxuries I craved are now mine. In a few years I expect to have more wealth than I ever dreamed of before, and all because **I have learned the money-making secrets of Wall Street.**

You Can Do It Too

After all, there is no great "secret" about my success. Hamilton B. Wills & Co., Ltd., can point the way to a like success for you if YOU WILL LET THEM. Send for that wonderful booklet of theirs, "How My Wife and I Made Our Investments Pay." Also ask for their new booklet, "Brains and Investments." These booklets explain the A B C of successful trading. They tell how fortunes are to be made in Wall Street; when to buy; when to sell; how to choose the right road, and a hundred other valuable pointers. You, too, can learn how I have made my big stride ahead. Why not get your start to-day?

Both these wonderful booklets are FREE. Just clip and mail the coupon below.

"No Man can afford to be ignorant of the Bible"

"To every man who faces life with real desire to do his part in everything, I appeal for a study of the Bible. No book of any kind ever written has so affected the whole life of a people." THEODORE ROOSEVELT.

MEN whose lives were shaped by the Bible laid the foundations of American freedom. This marvelous Book has moulded earth's loftiest characters. It meets the deepest need and every need of every man. It charts the only path to real and lasting success. It reveals man's only way of salvation, and it is the world's best business book. **Dig in it as for gold and you will secure treasure of value and extent beyond any calculation.**

Nothing is more needed in America today than Bible study, and for the great majority the most satisfactory method is by Correspondence. The

MOODY BIBLE INSTITUTE'S

Correspondence Department

had 9,503 persons under instruction the past year in one or more of its eight different Correspondence Courses. More than 40 occupations and nearly as many ages and nationalities were represented.

Letters of warmest appreciation are constantly received from students. For example:—

"This course has proved of incalculable value to me. I expected much, I received far more."

"It has never been my privilege to be fascinated with Bible study as I am with this course."

"I have come to know the Bible in an entirely new light. The Old Testament is now intensely interesting, whereas, before it was dry reading."

A Clergyman says: "I often mention in my sermons that a Correspondence Course from the Moody Bible Institute has been of far greater value to me than all my Bible and theological work in college."

TO REALLY KNOW THE BIBLE
is an education out of which springs the fullest and best development of one's powers in any vocation. Trained Bible students are in great demand for Christian Service at home and abroad. Whether in the home, church, school or the business world this training is of inestimable value.

ENROLL NOW!

You will be a personal pupil—time, place and amount of study under your own control. The prices are low—these courses are not sold for profit. There is no better time to start than NOW. Send the coupon at once for Free Prospectus describing our eight courses in detail.

RUPTURE

can be cured

Every day we receive letters from happy men and women telling of the freedom they have gained from long standing cases of rupture by the use of the Schuiling Rupture Lock.

Says He Was Cured

Matthew Beeman, of Idaho, Ohio, wrote us:

"I was ruptured for ten years, had worn other trusses without effecting a cure. But I wore the Schuiling Rupture Lock for eight months and effected a cure which seems to be permanent. For six months I have not used any Lock and no symptoms of return of the rupture.

"I cannot recommend the Schuiling Rupture Lock too highly, and advise anyone suffering from rupture to use it."

Over 10,000 people have found rupture relief through the Schuiling Rupture Lock.

A postal will bring our free book and trial offer

How to Work Wonders With Words

Here Is An Amazingly Easy Way to Make Yourself Popular, Admired, Successful Through the Magic Power of Your Speech

THE world is at the feet of the man or woman who can hold others beneath the spell of his or her voice. The person who can talk forcefully, fluently convincingly, is hailed as a Leader. He can bend others to his will, sway their minds at pleasure, make them his enthusiastic followers, enlist their support in everything he undertakes.

Fortune favors the man who has the knack of talking. Everything seems to come his way. He is chosen for the big, high-salaried jobs while others of equal ability are passed by unnoticed. They lack the power to impress others. They haven't the gift of putting their ideas across.

And in social life it is the person who can talk easily, gracefully, interestingly who is the centre of attraction, always in demand, always sure of a welcome, always the most popular member of any gathering.

The Amazing Secret Disclosed

Do you find it difficult to express yourself effectively? Are you timid, lacking in self-confidence, lost for the right words when others' eyes are upon you?

You need be so no longer! A wonderful new way has been devised that transforms you into a forceful, convincing, irresistible speaker. Now you too can have the marvelous power of talking under any and all circumstances. And, best of all, you can acquire this magic gift in practically one evening! For the whole secret of forceful talking has been disclosed by the famous authority, Joseph A. Mosher, A.M., Ph.D., Public Speaking Department, The College of the City of New York.

You have only to follow the clear, easy, directions Mr. Mosher gives and you as well as your friends and business associates will be literally astounded at the smooth, persuasive, impressive flow of words at your command.

But, even more, Mr. Mosher does not stop with making you a forceful speaker. He reveals to you the dramatic art of proper bearing, of having a commanding presence—that self-confident, easy poise that makes you master of every situation.

SPECIAL FREE OFFER

Don't handicap yourself in winning business and social success because you lack the power to impress others. Just mail the coupon below and you will receive absolutely free the wonderful book, "How to Work Wonders with Words." There is not one cent to pay—nothing to return. Keep this amazing book and see how quickly and easily you can gain the magic power of self-expression.

You have everything to gain and nothing to lose, so mail the coupon NOW, this minute—before this wonderful Free Offer is withdrawn. Remember, there is absolutely no cost nor obligation. Address, Public Speaking Department, National Salesmen's Training Association, Dept. 50-C, Chicago, Ill.

For A Hundred Million People

The Encyclopedia AMERICANA

Just as America leads the world in reconstruction, wealth, invention, manufacture, so The AMERICANA establishes a new leadership over all reference works.

The revolution in thought and progress brought about by the War, made all encyclopedias obsolete. A restatement of the world's knowledge thus became imperative. The AMERICANA gives a wide view of the world as it is to-day—not as it was ten years ago.

88,000 Subjects

Signed articles by 2,000 eminent world experts.

Purchased by thousands of universities and public libraries.

Inventors, Attention!

We Want Inventions to Sell

The demands of our clients are such that we must call upon inventors in general in order to supply them. Financiers, bankers, business men in general and manufacturers are among those who have applied to us to furnish them with inventions of commercial value and which will support good broad and valid claims. Can you help us to meet this demand? What have you? Will your patent give you the protection needed? If so, write us at once! We need you! The patents submitted must stand rigid investigation by reputable attorneys and must be commercially valuable. Write us NOW, TO-DAY, IMMEDIATELY. We make no listing charge. Our business is done on a strictly commission basis. If we do not make a sale, our services will cost you nothing.

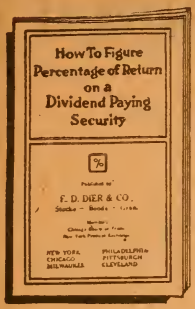
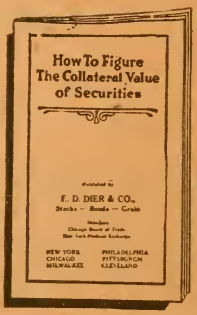
The Income Yield

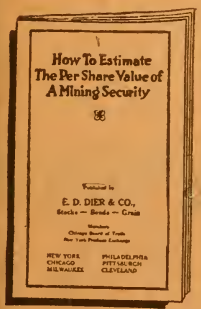


ALL conservative investors in the stock market are interested in the income yield they may expect from purchases of dividend-paying securities. "HOW TO FIGURE THE PERCENTAGE OF RETURN ON A DIVIDEND-PAYING SECURITY" is the title of an interesting booklet, outlining a simple method of establishing in advance of purchase the percentage of income yield on the amount of money involved. This booklet also contains a six per cent. interest table—a table showing actual rate of income on dividend-paying securities and bonds at various prices—rules for computing interest—and a table of equivalents of trading fractions.

Collateral Security

THERE is no factor in market transactions of greater importance to the investor than a thorough working knowledge of the subject of collateral security. This subject is carefully explained so that even the least experienced may understand, in the booklet entitled, "HOW TO FIGURE THE COLLATERAL VALUE OF SECURITIES."





How to Estimate the Per Share Value of a Mining Security

is the title of another constructive booklet containing a simple formula for the investor who wishes to know for himself, without asking any one's advice or judgment, approximately how great a value in dollars is behind each share of his investment or prospective purchase in the stock of a mining company.

THESE three booklets contain much of interest and value to those interested in the stock market and we shall be pleased to send any one or all of them on request for booklets A W-122.

Get Rid of Your Fat

Thousands of others have gotten rid of theirs WITHOUT DIETING OR EXERCISING often at the rate of over a pound a day and WITHOUT PAYMENT until reduction has taken place.

I am a licensed and practising physician and personally select the treatment for each individual case, thus enabling me to choose remedies that will produce not only a loss of weight harmlessly, but which will also relieve you of all the troublesome symptoms of overstoutness, such as shortness of breath, palpitation, indigestion, rheumatism, gout, asthma, kidney trouble and various other afflictions which often accompany overstoutness.

My treatment will relieve that depressed, tired, sleepy feeling, giving you renewed energy and vigor, a result of the loss of your superfluous fat.

You are not required to change in the slightest from your regular mode of living. There is no dieting or exercising. It is simple, easy and pleasant to take.

If you are overstout do not postpone but sit down right now and send for my FREE TRIAL TREATMENT and my plan whereby I am to be PAID ONLY AFTER REDUCTION HAS TAKEN PLACE if you so desire.

Worth $10,000 a Year and Didn't Know It

For Years Warren Hartle Worked for $18 a Week. Today He Is Earning $10,000 a Year! Read the Amazing Story of His Sudden Jump to Big Money

FOR ten years he worked in the Railway Mail Service, at pay ranging from $900 to $1,600 a year—just bare existence wages, with no opportunity to make more or save. **And now he is earning $10,000 a year!** Yes, Warren Hartle makes as much some months now as he formerly did in a year's hard work on the railroad.

Hartle's sudden rise to real success may sound amazing, almost unbelievable, **yet there is not the slightest doubt that you can do exactly what he did. The same secret has brought prosperity to thousands of others.**

J. P. Overstreet of Denison, Texas, for example, was a police officer earning less than $1,000 a year. Now he writes: "My earnings for March were over $1,000." C. W. Campbell, Greensburg, Pa., formerly a railroad employee on a small salary, earned $1,562 in one month. Then there is Charles L. Berry of Winterset, Iowa, who quit his job as a farmhand and earned $2,140 in one month!

Mr. Hartle, Mr. Overstreet, Mr. Campbell and Mr. Berry are all successful salesmen. They realized their ambition by landing $10,000 jobs in an amazingly simple way, with the help and guidance of the National Salesmen's Training Association.

WE TRAIN YOU AND HELP YOU LAND A JOB

The National Salesmen's Training Association is an organization of topnotch Salesmen and Sales Managers formed for the express purpose of training men in the science of successful selling. You do not need to know the first thing about selling—for the N. S. T. A. trains you from the ground up—in your spare time at home.

In addition, the N. S. T. A. maintains a Free Employment Service to help its Members to positions just as soon as they are qualified and ready.

Get out of that rut. Work for yourself! Salesmanship is the biggest paid of all professions. Never before have the opportunities been greater.

SEND FOR FREE BOOK NOW.

Just mail the coupon or write for our free illustrated Book, "A Knight of the Grip." Let us prove to you that regardless of what you are doing now, you can quickly become a Master Salesman. Let us show you how you, too, can step into the ranks of these big money makers of business. Learn what we have done for others and what we stand ready to do for you. Don't put it off a minute—mail the coupon at once.

National Salesmen's Training Association

KALOTHRIX is a hair tonic that will save your hair. It will positively eradicate dandruff and itching scalp. It is highly recommended for falling and faded hair and is a delightful hair dressing. It is free from grease and animal fat. Its use makes and keeps the hair attractive and develops thick, strong and lustrous hair. It is indispensable for the comfort and health of your scalp; entirely removing every particle of dandruff, all excess of oil or dirt.

This Hair Tonic is extensively used in European countries.

To obtain results all you need do is simply rub it in the scalp once a day until your head is free from dandruff, then use two or three times a week.

The price is two dollars ($2.00) a bottle.

A better investment for your hair cannot be made!

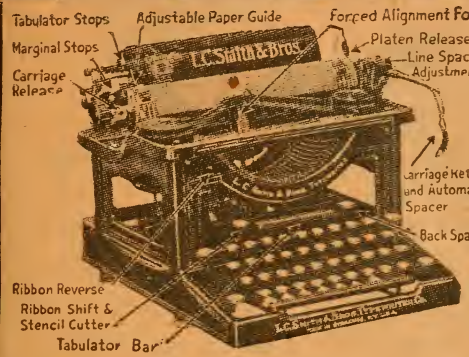
TYPEWRITER SENSATION!

Free Trial—Use as You Pay



Send us only $5.00 a month until the low total price of $64.85 is paid, and then machine is yours. This is absolutely the most generous typewriter offer ever made. Do not rent a machine when you can pay $5.00 a month and own one. Think of it—Buying a $100.00 Machine for $64.85. Cash price, $59.85, just a little more than half its original price.

STANDARD VISIBLE L. C. SMITH MODEL No. 5

Perfect machine. Standard size. Keyboard of Standard Universal arrangement, 42 Keys, writing 84 characters—universally used in teaching the touch system. The entire line of writing, completely visible at all times, has the tabulator; the two-color ribbon, with automatic reverse, the back spacer, ball-bearing type bars, ball-bearing carriage action, ball-bearing shift action; in fact, every late style feature and modern operating convenience. Comes to you with everything complete; tools, cover, operating book and instructions—nothing extra to buy. **You cannot imagine the perfection of this beautiful reconstructed typewriter until you have seen it. We have sold thousands of these perfect late style machines at this bargain price and every one of these thousands of satisfied customers had this beautiful, strictly up-to-date machine on five days' free trial before deciding to buy it.** We will send it to you F. O. B. Chicago for five days' free trial. It will sell itself, but if you are not satisfied that this is the greatest typewriter you ever saw, you can return it at our expense. You won't want to return it after you try it, for you cannot equal this wonderful value anywhere.

SEND NO MONEY Put in Your Order *Now*

$4.85 AFTER TRIAL

When the typewriter arrives deposit with the express agent $4.85 and take the machine for five days' trial. If you are convinced that it is the best typewriter you ever saw keep it and send us $5.00 a month until our bargain price of $64.85 is paid. If you don't want it return it to the express agent, receive your $4.85 and return the machine. We will pay the return express charges. This machine is guaranteed just as if you paid $1 0.00 for it. It is standard. Over half a million people own and use these typewriters and think them the best ever manufactured. **The supply at this price is limited; the price will probably be raised when next advertisement appears, so don't delay. Fill in the coupon today—the typewriter will be shipped promptly.** There is no red tape. We employ no solicitors—no collectors—no chattel mortgage. It is simply understood that we retain title to the machine until full $64.85 is paid. You cannot lose. It is the greatest typewriter opportunity you will ever have. **Do not send us one cent. Get the coupon in the mails today—sure.**

They Hated Him Because He Cried "Prove It"

Col. Robert G. Ingersoll

Is there a God? Is there a Hell? Is there a Heaven? Are we better than the Savage who worships an Idol? "Prove it and I'll believe you," cried Col. Robert G. Ingersoll. But they couldn't—or wouldn't. So they cast him out. They hated him. They fought him. But for fifty years he fought back. Never could they batter down his logic. Never could they answer with reason.

We sympathize with the savage whose God is a monstrous Idol. We pity him for the glory he places upon the ring in his nose. But are we better than he?

Is it true that much of our goodness is mothered by cowardly fear? Is it true that our God is created by a mind too lazy to do its own thinking? If you believe in a God, why? Is there a God? Are you afraid to say "No?" Is there a Hell? Why don't you paint your face and your body and wear a nose ring? Why don't you worship a snake?—others do!

Col. Robert G. Ingersoll for fifty years preached the gospel of truth. He sympathized with people who feared what he believed did not exist—a God. He felt that the world was being swallowed up by a phantom—a shadow— a "bogey man." He challenged every sect, every creed. He dared them to prove to him that they knew what they were talking about. He defied them to answer him. Instead, they held him up to scorn. They mentally burned him at the stake. But they couldn't find a flaw in his logic. And that's what hurt.

Ingersoll toppled over a brittle Belief and it broke into thousands of pieces. He said, in effect, that the Bible was a fake. Of course, that was a bad thing to say, especially if you really believed it and could make thousands of others believe it.

Ingersoll was a power. In olden days he would have been tarred and feathered, imprisoned, "done away with." He could have been Governor of Illinois—some say he could have had the Presidency. But he wouldn't stop talking against a blind acceptance of a man-made God. No one could find a "motive" for his belief, save the true motive he had—to shake people from the mental prison into which they had been thrown by "blindly following the blind." He wanted to break the shackles of fear. He wanted to bring people into the light. And for fifty years Ingersoll spoke to packed houses up and down and across the continent. Even after his death he was fought—for they tried to prove that he recanted. But under oath his family have sworn that Ingersoll died as he had lived—an agnostic—an unbeliever.

The Complete Works of
Col. Robert G. Ingersoll
In 12 Handsome Volumes
SHIPPED FREE

Whatever your belief—whatever your religion—you must justify it to yourself. You cannot go on and on, living a lazy mental lie—if it be a lie. And if it be Truth, how much more firm will be your faith if the world's greatest Unbeliever cannot shake you from it. And if it be, to your challenged mind, a lie, think what freedom must come to you when the chains are broken.

Ingersoll, even the Clergy admit, was a great thinker. Henry Ward Beecher said that no man ever lived who could talk like him. The press quoted him. Tens of thousands of pamphlets containing his orations were sold.

He was the subject of attack from nearly every pulpit, in every city, town and hamlet in the country. It is safe to say his words were translated into every foreign language. He couldn't be stopped. He couldn't be bought. He couldn't be shaken one iota from the truth as he believed it.

Every man and woman with a spark of courage will want to read Ingersoll. He has been dead for twenty years, but no one has yet appeared who could answer him, and no one has yet appeared who could add one whit of argument to the case he presented.

Send No Money

We are anxious to send you the Complete Works of Col. Robert G. Ingersoll for 5 days' free inspection. This is the New Dresden Edition, comprising 12 handsome Octavo volumes bound in Cardinal Red Flaxenweave cloth, with Gold Leaf Cover Decorations and Lettering, which will never tarnish. Crimson and Gold Silk head and footbands, more than 6,800 pages printed from New Scotch Roman Type, especially cast for this edition, on High Grade perfectly opaque Library Book Paper.

This new edition of Ingersoll includes all the important writings of his life. A typical few are mentioned here.

The entire twelve volumes will be sent to you, without payment of any money in advance, so that you may examine them, if you wish to do so. Examine them, read one or two of the articles, judge for yourself of the inspiring value to you of the works of this great American. Then, if not more than pleased with the set, return it at our expense. If you are sure you want to keep it, as you doubtless will be, you can pay for it on easy monthly terms as shown on the coupon.

HEALTH—STRENGTH—SUCCESS

$35 Dumbbell Outfit For $17

FOR a limited time only, I am selling my regular $35.00 dumbbell outfit, which is composed of the latest Strength Maker model, interchangeable dumbbell at less than half price—$17.00. With this outfit you will receive a complete course in Physical Culture, showing the proper way to use long bar bells, short bar bells, ring weights, and kettle bells. The exercises are all illustrated with half-tone photographs showing the method that has made undeveloped men into champion athletes.

THE STRONGEST MAN IN THE WORLD

Warren Lincoln Travis says: "I owe my great strength and perfect physique to the Strength Maker Dumbbells that I used daily to keep my health and strength at its very best."

YOU CAN HAVE PEP, PUNCH AND STAMINA AND KNOCK THE SPOTS OUT OF WEAKNESS, HALFHEARTEDNESS, DISCOURAGEMENT AND FAILURE.

You can have a sturdy, strong and healthy mind and body. You can feel the thrill and joy of living and be a man every inch of the way from top to toe. Keep yourself in robust health and perfect physical condition through the systematic use of the Strength Maker Dumbbell outfit described in this message.

The Strength Maker is interchangeable. You can make it into a short bar bell or a long bar bell or two kettle bells. The long bar bell weighs about 40 lbs., the short bar bell about 35 lbs. and the kettle bells about 20 lbs. each. but you can load them with sand which will make the weight as heavy as you should ever need for all purposes of health and physical powers. Should you wish a very heavy bell, you can use shot, which will make the long bar bell about 210 lbs., the short bar bell about 200 lbs. and the kettle bells about 100 lbs. each.

Remember, this dumbbell outfit, and the Physical Culture course accompanying it, teaches the weak how to be strong, the sick how to be well, the strong how to be more vital and vigorous. With this outfit you will have the key to mental and physical balance such as you have never before known. In short, it teaches you how to live, think and succeed in a big way.

This outfit practically gives you a complete gymnasium in your own home so that you don't need to go to expensive gyms or belong to high class clubs.

The above method is the system I have so successfully used to develop thousands of men and young men into strong, healthy specimens of superb manhood for the past 35 years in my 14 gymnasiums in New York City.

A month's use of this dumbbell outfit in your own home will more than pay for the complete outfit. The above offer is for a short time only. Send your order in to-day with $17.00 money order or registered letter to.

Let Sherwin Cody Make You a Master of English in 15 Minutes a Day

You are sized up every day by the way you speak and write. The words you use, the way you use them, how you spell them, your punctuation, your grammar—all of these tell your story more plainly than anything else you do. And it is a story open to all. An unusual command of language enables you to present your ideas, in speech or on paper, clearly, forcefully, convincingly.

SHERWIN CODY

Sherwin Cody's Wonderful New Invention

A simple method has been invented by which you can acquire a command of the English language from the ground up. Sherwin Cody, perhaps the best known teacher of practical English, after twenty years of research and study has perfected an invention which places the ability to talk and write with correctness and force within reach of everyone with ordinary intelligence. Sherwin Cody was amazed to discover that the average person in school or in business is only 61% efficient in the vital points of English grammar. That is because the methods of teaching English in school left you only a hazy idea of the subject—they did not stick in your mind. But Sherwin Cody's new invention upsets all old standards of teaching English. His students secured **more improvement in five weeks than had previously been obtained by other pupils in two years.** Only 15 minutes a day of spare time with the **"100% Self-Correcting Method"** will, within a very short time, give you an easy command of language.

15 Minutes a Day Perfects Your English

Mr. Cody was granted a patent on his unique device, and now he places it at your disposal. It overcomes the only weak point in instruction by mail. It actually takes the place of an instructor at your elbow. It assigns you lessons in Expression, Spelling, Punctuation, Grammar, Reading and Conversation, corrects them for you, and anticipates your questions. It even grades your paper and assigns you your class percentage till you reach the 100% mark. Yet so simple are the lessons that only 15 minutes a day are required, and each minute is fascinatingly interesting.

New Book Free

If you feel your lack of Language Power, if you are ever embarrassed by mistakes in grammar, spelling, or punctuation, if you cannot command the exact words to express your ideas, this booklet will be a revelation to you. Merely mail the coupon and it will be sent by return mail. Learn how Sherwin Cody's new invention makes command of language easy to gain in 15 minutes of your daily spare time. Mail this coupon or a postal AT ONCE.

HAVE A CLEAR, ROSY VELVETY COMPLEXION

The Guaranteed Way. Money Back If Not Satisfied

Don't doubt—because I give you a guarantee which dispels doubt. I refer you to women who testify to the most astonishing and gratifying results. Your complexion may be of the muddiest, it may be disfigured with pimples, blackheads, whiteheads, red spots,. enlarged pores, wrinkles and other blemishes. You may have tried a dozen remedies. I do not make an exception of any of these blemishes. I can give you a complexion, soft clear, velvety, beyond your fondest dream. And I do it in a few days. My statements are sober, serious, conscientious promises. I want you to believe, for I know what my wonderful treatments will do.

YOU HAVE NEVER HEARD OF ANOTHER METHOD LIKE MINE. SCIENTIFIC—DIFFERENT

My method is absolutely different. It has to be to warrant my statements. You know that. I get away from all known methods of cosmetics, lotions, salves, soaps, ointments, plasters bandages, masks, vapor sprays, massage, rollers, or other implements. There is nothing to take. No diet, fasting or any interference whatsoever with your accustomed way of life. My treatment is absolutely safe. It cannot injure the most delicate skin. It is pleasant, even delightful. No messy, greasy, inconvenient applications. Only a few minutes a day required. Yet results are astounding.

I want to tell you in detail about this wonderful treatment. So send for my booklet. It is free. You are not obligated. Send no money. Just get the facts, the indisputable proofs. This is the one method that has restored to beauty the complexions of tens of thousands of women. Don't say your case is an exception. You have my unqualified promise. You have nothing to lose—everything to gain. **Mail Coupon To-day!**

CAN YOU

Answer These Questions About the Stocks You Hold?

What were the high and the low prices of each of your securities for the past ten years?

What is the complete dividend record of each of your stocks?

What is the capitalization and the funded debt of each company?

Are interest and dividend requirements being earned, and, if so, at what rate?

What is the book value of each of your securities?

How large is the aggregate amount of the issues preceding yours in lien on the assets of each company?

Do you know the ticker abbreviation of your stocks?

Do you know where the principal offices of your companies are located?

If you want to find the answers to all of these questions and to thousands of others of vital importance to investors, you should have our

Prevent Smuts

It is more necessary today to employ scientific methods on the farm than ever before. Cleanse all seed grain with FORMALDEHYDE solution before planting. Positively destroys smuts of wheat, oats, barley, rye, etc.

FORMALDEHYDE
The Farmer's Friend

Spread the seed grain in a thin layer and sprinkle with diluted FORMALDEHYDE. Shovel over thoroughly and cover the pile with bags for about ten hours. Dry out by spreading uncovered in a dry place. Disinfect the drill with FORMALDEHYDE before planting. One pint bottle of FORMALDEHYDE from our laboratory will treat 40 bushels of seed.

FORMALDEHYDE rids potatoes of scab and blackleg; destroys disease germs in sick rooms, toilets, drains, stables, kennels, chicken houses, etc., also kills flies.

WHAT PLANS HAVE YOU MADE FOR YOUR FUTURE?

Here Is a Plan for Bigger Income and a Start for Financial Independence.

IF YOU CAN SAVE A LITTE MONEY EACH MONTH, and hope to be independent in your later years, and not dependent on some one else when you are no longer fit for work, the plan should interest and appeal to you.

OUR FREE LETTER "BUILDING INCOME BY PURCHASING Dividend Paying Stocks" tells how by buying stocks of sound, seasoned, old established, well known, successful companies traded in on the New York Stock Exchange, you are able to become a partner and share in the large profits these companies make. How by following out the same plan the banks use, which enables them to pay 4% to their depositors and still have plenty left over for salaries, other expenses, etc., you can make the extra per cent. yourself.

THIS FREE LETTER HAS HELPED OTHERS TO INCREASE their income and should be of material help to you. You surely do not want to have some one pay your way when you are no longer fit for work.

FORTUNES HAVE BEEN MADE AND MUCH MORE MONEY will be made in issues like United States Steel Corporation, Pennsylvania Railroad, General Motors, Studebaker, Automobile, American Car & Foundry Co., Texas Oil Co., American Tobacco Co., Baldwin Locomotive Works, Southern Pacific R. R. and the Standard Oil Stocks.

RIGHT NOW—FILL OUT THE COUPON AT THE BOTTOM— Send for this letter. Get started now—There is no cost or obligation, simply sign and mail this coupon. It only takes a moment and it may be the most important thing you did to-day.

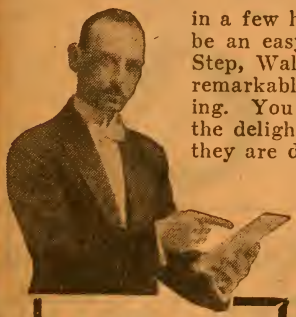
Learn to Dance!

At Home — Remarkable New Easy Way

Brings advantages of World's Greatest College of Dancing right to you—in your own home—no matter where you live. You can now qualify as an accomplished dancer of all Modern Ballroom Dances in a *fraction* of the usual time and at a *fraction* of the usual cost.

I Can Teach You!



in a few hours—at home—in private. I can train you to be an easy, confident dancer of Fox Trot, Toddle, One Step, Waltz, Two Step and newest society dances. My remarkable new method makes dancing as easy as walking. You will dance with the confident assurance that is the delight of only those who **perfectly understand** what they are doing.

THE PEAK SYSTEM OF MAIL INSTRUCTION

is the original and universally recognized perfect system of teaching dancing. So clear, so simple, so complete you **instantly understand the principles of dancing** and will start dancing gracefully—even if you've never danced before.

New Diagram Method—Easy, fascinating. Nothing left to guesswork. You KNOW—positively—you are dancing correctly.

No Music Needed! My perfected method enables you to learn in absolutely correct time. You will then dance with as much ease as if you had learned with an orchestra.

60,000 PUPILS

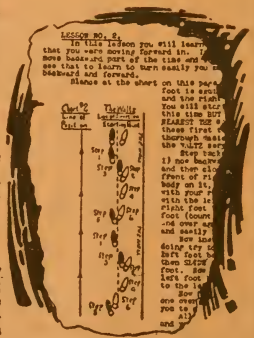
Years of study and practice have perfected my methods. Now I offer you home instruction in dancing that is unequalled in ease and simplicity. Over 60,000 successful graduates offer enthusiastic testimony of their splendid success with my simple, easy-to-master system.

Your Success Guaranteed

So confident am I of the success of my pupils that I legally guarantee to return every cent of your tuition if you are not perfectly satisfied in every respect. YOU to be the only judge.

Write Today for Free Booklet

Send at once for full particulars of my Special Offer and my FREE BOOKLET, which tells how to become an accomplished and graceful dancer—popular in any ballroom. Do this NOW. It places you under no obligation.



BETTER THAN PRIVATE LESSONS.

Dear Professor:

I have been able to dance for some time, but since taking your course I am beginning to dance with greater ease and confidence than ever before. Your way of teaching is even better than private lessons.

Sincerely yours,
J. W. SCHOLTZ.
C. & C. Hospital,
Denver, Colorado.

GLADLY RECOMMENDS COURSES.

Dear Professor Peak:

I cannot give your courses enough praise, and will gladly recommend them to any one contemplating taking ballroom dancing.

How I Increased My Arm 6½ Inches

EARLE E. LIEDERMAN

When a youngster I was a thin, frail boy, who showed little promise of being anything but a weakling. I always envied my robust companions and wished that I could be like them, but I had been told the old story that strong men are born, not made. What a terrible falsehood this is. And to think of the thousands of people who have been robbed of their ambition by these false teachings. When I entered high school I was fortunate enough to meet an instructor who was willing to work with me and who started me on my road to success. By faithfully following his teachings and by hard work, I gradually developed myself to have an average sized body so that I at least need not be ashamed. My arm measured 10 inches in circumference and my whole body had developed into fair proportions.

THE SECRET DISCOVERED

I was so pleased with these results that I decided to make this my life study, so I bought all the books I could obtain on "human anatomy" and tested out various forms of exercise to see what their effects would be on my body. I finally discovered the real secret of progressive exercise and I want to say right here that a man discovering a gold mine was never more happy than I. I knew at once my fondest hopes would be realized. I could feel real vim and vigor thrilling my veins and I was soon able to accomplish feats of strength which hitherto I had thought impossible.

Friends who met me on the street began to look at me in astonishment. The boys started to call me the strong man and you can imagine how delighted this made me.

THE RESULT

As I mentioned before, my biceps had measured but 10 inches before I made this discovery. To-day they are exactly 16½ inches. This is not only far beyond that of the average strong man of to-day but is conclusive proof to me that my secret method far surpasses that of any other system.

Numerous demands were soon made on me to appear in public displaying my wonderful development and also to perform the numerous strength tests which I was able to accomplish. After travelling throughout the country having my name as the headliner in the various theatrical houses, I decided to become a public benefactor and impart this knowledge to others. To-day my pupils run into the thousands and I receive letters daily from other men who have sprung into prominence like myself by following my guidance and instructions.

WHAT THIS MEANS TO YOU

You, too, can have this powerful physique and abounding health if you wish it. I don't care how weak you are, I will broaden your shoulders, deepen your chest and give you the same powerful arms and legs which I have developed for myself and thousands of others.

DON'T DELAY

If you only knew what perfect health meant you would not hesitate one minute. And the joys of a strong, muscular body can never be described. Don't waste your time with foolish methods that cost both time and money. What you want is guaranteed results and you want them in the shortest possible time. Don't take my word for it, make me prove it.

Send for My New Book, "MUSCULAR DEVELOPMENT"

IT IS FREE!

It tells the secret, and is handsomely illustrated with 26 full-page photographs of myself and some of the world's best athletes whom I have trained, also full particulars of my splendid offer to you. The valuable book and splendid offer will be sent you on receipt of only 10 cents, to cover wrapping and mailing. Sit right down now and fill in the coupon. The sooner you get started on the road to health and strength, the easier it will be to reach perfect manhood. Don't drag along one day longer—mail the coupon to-day.

COMFORT AND INDEPENDENCE IN THEIR OLD AGE

Because they were thrifty in their younger days and invested their savings with care, this happy couple own their own home and automobile, are financially independent, and can spend the evening of their lives in serene comfort and happiness.

Thrift is a wonderful habit. Most of us acquire it only after swallowing the bitter pills of regrettable extravagances and lost opportunities. But it can be acquired in a simple, easy way under our plan. Properly practised, thrift inspires confidence, spells success and assures happiness for our loved ones.

If you have real ambition, if you aspire to better things, if you have a sturdy pride in your own independence, if you want happiness for those dear to you, you will not lose a moment's time to write us for our plan to help you live within your income and invest wisely.

Our plan has been evolved for the convenience of small investors as well as large. It will show you how you, too, can lay the foundation for financial independence, can start building in the most effective way, a reserve for opportunity, income or emergency.

Write for our FREE valuable booklet—NOW—THIS VERY MINUTE. It is entitled

"HOW YOU CAN BECOME FINANCIALLY INDEPENDENT"

and explains our interesting plan in detail.

Simply Send for No. W.A.-22. It does not obligate you in any way.

Get a Better Job—

Expert letter writers who can get business by mail are in great demand. Business men are looking for more business, and will pay well for men who can get quick results. We are constantly being asked to secure good letter writers for concerns who offer fine futures.

MAKING LETTERS PAY SYSTEM is not just a letter writing course. It is used in the offices of over 3,500 prominent concerns throughout America. It is something that you actually take with you on the job. It helps you make good—we go over your letters and make them pull better—we stay with you **after you** have secured the position as well as **aid you to secure it.**

MAKING LETTERS PAY SYSTEM costs $36, but we are so sure it will make good that you need pay only $18 (in two convenient payments) for which we will give you the complete course, system, aid, etc. Then, after you have actually secured the position you can pay the balance. This is fair. Few concerns offer such a liberal arrangement.

Ask for more information. Mention this ad, because this offer is open only to readers of the Almanac.

A Business Building Year

Intelligent men and women, purchasing seasoned, income-yielding securities this year, will not only obtain a liberal income but should reap handsome appreciation profits as the march of business goes on.

Our payment arrangement for purchasing sound securities has been expressly devised for thinking individuals who are far-sighted enough to lay aside a convenient sum systematically. It requires only a small initial deposit and smaller monthly payments.

Subject entirely to purchaser's control.

Pays interest at a liberal rate.

Promises attractive enhancement profits.

May be sold at any time while being paid for.

Write for Booklet W. A. explaining the advantages of our plan.

NO COST OR OBLIGATION

How to Handle Rough Necks

Tom Shaw, world-famous master of the Secrets of Defense and Attack taught to the 10,000 members of the New York Police Department, of which he has been chief physical instructor for more than ten years, and which has made him an international celebrity, will teach u how to handle rough necks, big or small. No muscular strength eded—the bigger they are the harder they fall. Your sweetheart, fe or mother is always safe with you. If a big, husky rough neck ys a word—with a quick twist of the wrist you can paralyze him— is helpless. You can even handle armed highwaymen without danger yourself. You will be taught secret death grips with which you uld kill a footpad if necessary. No strength or weight needed—you e the master of men twice your size. Be a real protector to your ved ones.

Tom Shaw, the greatest instructor of Attack and Defense, can teach u at home—quickly and easily. First time offered to the public. is course is for law-abiding citizens only.

Act to-day—in a week you can surprise your friends—make them lpless as babies—a sudden move—a quick grip—and they are on their cks—down and out.

LIMITED OFFER

To introduce this course we have cut the price from $12 to $6. Mail e coupon to-day—act quick—be a "he-man."

SEND NO MONEY

Look the course over—if you are not satisfied that it is well worth money—return the lessons. No charge. If you feel as all others—t it's the greatest course offered—send check or money order for 00 and we'll send the balance of the lessons.

TOM SHAW INSTITUTE,
Dept. C, 1029 S. Wabash Ave., Chicago, Ill.

Mail me your book, "How to Handle Rough Necks," together with seven of Tom Shaw's lessons in the art of Defense and Attack, for three days' free examination. If I keep the lessons I will take the full course and send $6.00 within three days for the balance of the lessons.

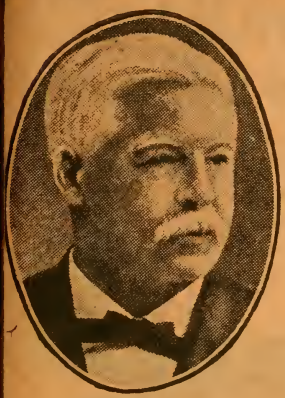
Learn From the World's Greatest Educator



T. J. FOSTER, M. S., LL.D.

Theodore Roosevelt said: "I look upon instruction by mail as one of the most wonderful and phenomenal developments of this age."

The originator of instruction by mail, T. J. Foster, has, during the last thirty years helped hundreds of thousands of ambitious men and women to lift themselves above the crowd into happier, more lucrative occupations and professions. In every clime and country leaders of thought and progress invariably include men and women who started upward through the Foster System.

Dr. Foster's latest and crowning achievement has been the establishment and extension of Industrial Correspondence University, Inc., including the Women's College of Arts and Sciences.

The courses offered surpass all previous efforts in scope and value, and the improved method of instruction is far more efficient than the original Foster method used by the numerous correspondence schools that patterned after his earlier efforts.

A broad curriculum has been adopted, and various technical and cultural courses are being painstakingly prepared along the lines of the **new standard of quality** set by Dr. Foster.

Those in operation now are listed in the coupon.

If you are truly ambitious and want the best, most modern, helpful and economical instruction and guidance toward a broader usefulness and higher rewards—sold on the new **Pay-As-You-Learn Plan** fill in and mail the coupon, marking X before the course that interests you, or fill in any subject not listed, but which may be ready when you write.

T. J. FOSTER, President,
Industrial Correspondence University, Inc.,
Philadelphia, Pa.

As per your advertisement in the World Almanac, please send full particulars of the Course before which I have marked X, and explain your new method of spare time instruction.

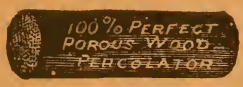
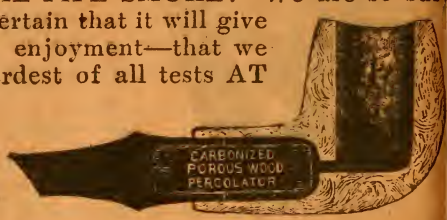
The bigger *Pipe Crank* you are the more we dare you to try this *"Broken-In"* Pipe—on approval!

Load up a Percolator Pipe with your favorite tobacco. Fire away, and from the very first deep puff you will KNOW that you are off on your FIRST REAL PIPE SMOKE! We are so sure of the Percolator Pipe—so certain that it will give you a new standard of pipe enjoyment—that we want you to give it this hardest of all tests AT OUR RISK.





This replaceable porous East Indian reed—carbonized (charred) forms a non-clogging filter of purifying CHARCOAL.

The whole secret lies in the CHARCOAL REED. EVERY BIT of the smoke MUST percolate through its tiny sap channels, with the result that ALL tongue-bite, "juice," throat irritation, "heel" and "back-fire" are entirely eliminated!

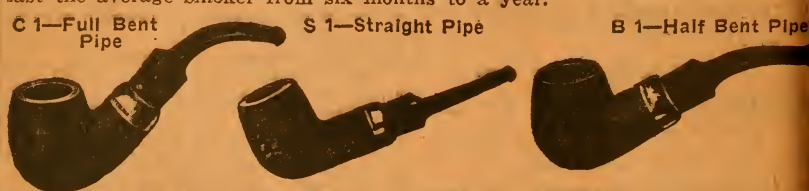
Due to the exceptionally porous qualities of the reed, the pipe has a free draught and the smoke in passing through the myriad of tiny charcoal cells loses none of the pleasant tobacco flavor, and is dry, sweet and cool! No saliva can trickle down into the tobacco. There is never a soggy "heel" in the bowl and ALL the tobacco can be smoked with complete satisfaction and pleasure DOWN TO THE LAST CRUMB.

Replacement expense of the Percolators is practically negligible. A box of ten comes with each pipe and extras cost only 65c. per box of 50, which will last the average smoker from six months to a year.

C 1—Full Bent Pipe

S 1—Straight Pipe

B 1—Half Bent Pipe



EVERY PERCOLATOR PIPE IS SENT ON APPROVAL! Smoke it for four (4) days. If you like it send us $2.50. If you don't, return it to us and there will be no argument. YOU ALONE are the judge and jury. Order on your firm's letterhead or inclose your business card. Or, if you prefer to remit with order, and the pipe is unsatisfactory, return it to us and your money will be refunded instantly without question.

The pipes are high grade in every detail—excellent workmanship—bowls of best imported Italian briar root—solid vulcanized rubber bits—sterling silver bands—length 5 in., weight 1¼ ounces. And last, but not least, the inside of the bowl is carbonized, so the pipe is "BROKEN-IN" when you get it!

Our Latest Illustrated Catalogue of Pipes from $2.50 to $20.00 on Request

LEARN CARTOONING

If you like to draw, develop your ability and raise your income.

Hundreds of others who had the same ambition have become successful cartoonists through the **Landon Course of Cartooning.** They are **now earning from $50 to $400 and more per week.**

The Landon Course of Cartooning with the famous Landon Picture Charts teaches you how to make **original drawings.** As your eye follows sketch after sketch on these charts you learn just how and where to start a drawing and place each line in completing it.

You can learn during your spare time, at home—and a personal criticism service on each lesson corrects any mistakes which you may make.

Celebrated cartoonists and educators everywhere pronounce **Landon Picture Charts** as the greatest achievement in the teaching of drawing. **No other plan develops originality so rapidly.**

The opportunities in cartoon work were never so great as at present.

Write to-day for sample Landon Picture Chart, long list of **successful Landon students** and full information showing the possibilities for you. **Please state your age.**

***The* Landon School**

3000 National Bldg., Cleveland, O.

The Secret of Successful Investing

In a market crowded with stock and bonds of every description the average investor finds it a difficult task to separate the financial wheat from the chaff.

That the stock market to-day offers opportunities for profit unparalleled in history is evident to all students of financial conditions, but the successful investor must take cognizance of every change affecting the securities he holds or intends to purchase, and profit accordingly. Without the aid of a well equipped statistical department the average investor is not in a position to note the significance of these changes.

Our statistical department shall be pleased to assist you in the selection of securities. Give an opinion of your present holdings, and keep you informed of any changes that might affect their value.

Do not hesitate to write us when you contemplate making a purchase.

FREE ON REQUEST

The Secret of Successful Investing

An interesting booklet which every investor may read with profit.

The Unlisted Stock & Bond Review

A publication of interest to banks and investors holding unlisted stock and bonds and foreign bonds. Contains the latest information regarding these issues and the quoted price.

The Investors' Pocket Manual

A monthly booklet giving correct statistical records and the high and low prices of all Railroad, Industrial, Oil and Mining stocks and bonds listed on all the markets. Also Grain, Cotton, Coffee and Provisions.

"I make no secret that Inecto Rapid has made me look 20 years younger."

It was at an afternoon tea in a beautiful suburban home, near New York. "My dears," said Mrs. Brown, "you know I was so proud of my hair when I was married and so was John, but time and worry are no respectors of pride nor of hair.

"At first I lamented fate, then I secretly tried, oh, so many things. My hair was dyed this and dyed that until it began to die itself.

"It was torture. I was ashamed of my hair"——Miss Renolds, another guest, broke into the conversation at this point. "But your hair is beautiful NOW, Mrs. Brown."

"Inecto Rapid," was the reply. "It is a European preparation, the discovery of Dr. Emile, Physician-Scientist of the Pasteur Institute, Paris. I do not feel any more hesitancy in openly praising it than I do my favorite powder or cold cream. In fact, its great success is due to one woman telling another."

Inecto Rapid has created an entirely new art—Hair Tinting. It banishes gray hair in 15 minutes and brings back the original lustre to hair that has been damaged by so-called "restorers."

Inecto Rapid is not affected by salt water, sunlight, shampoo, Russian or Turkish Baths, perspiration or waving. It does not rub off and is a delightful preparation to use. It is sold under the following specific guarantees:

1. **To produce a color that cannot be distinguished from the natural color under the closest scrutiny.**
2. **Not to cause dark streaks following successive applications.**
3. **To maintain a uniform shade over a period of years.**
4. **To be harmless to hair or growth.**
5. **Not to make the texture of the hair coarse or brittle and not to cause breakage.**
6. **Never to cause too dark a color through inability to stop the process at the exact shade desired.**
7. **To color any head any color in 15 minutes.**
8. **To be unaffected by permanent waving, salt water, sunlight, rain, perspiration, shampooing, Russian or Turkish Baths.**
9. **Not to soil linens or hat linings.**
10. **To produce delicate ash shades heretofore impossible.**

Inecto Rapid applications are made at the leading hairdressing salons throughout the world.

Lucios Pearls

OFFER No. 3

When the postman delivers them to your door pay him our advertised price of only $3.45. Then open the package and take out the pearls. Hold these gems in your hands, feel their satin-like smoothness, see how perfectly each pearl is made, how evenly graduated and exactly matched. Then put on your best dress and clasp the pearls around your neck. Note carefully their brilliant lustre, satiny sheen and the delicate tints that almost seem to glow as they droop gracefully around your neck. Invite your friends to admire them. They'll be amazed when you take them into your confidence and reveal the fact that they are not really genuine orientals and that they cost so ridiculously little. Even you will naturally wonder how it is possible for us to sell them at such a low price—so we'll tell you. First of all please remember that we import these pearls direct from Europe; second, that we have been pearl experts for 20 years; and third and most important, we want several thousand new customers for our Mail Order Dept. That is why we are offering these pearls with a solid gold catch at the remarkably low price of only..... **$3.45**

How to Order

Send No Money. Select any or all of the gems pictured and rush your name and address to us. Just mention which you want and your treasured selections will be rushed to you by return prepaid mail. Pay the postman the amount of your order on arrival.

MARK YOUR SHIPMENTS with a DIAGRAPH

(Built to Last a Business Lifetime

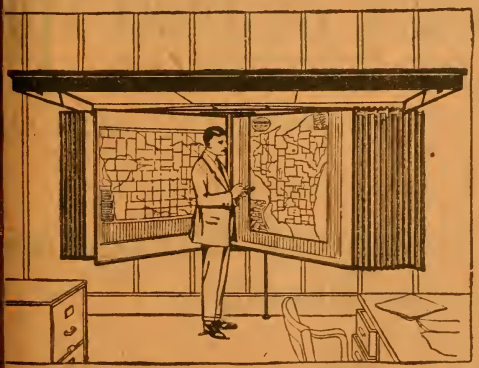
IMPLICITY, SPEED, ENDURANCE—these have made the DIAGRAPH famous rywhere for over twenty years. They assure permanent satisfaction. Furthermore, the new model DIA-APH has improved features of vital importance not to be had in any other machine. The DIAGRAPH forms a broader and more useful range of necessary work than is possible by any other construction. at's why you cannot now name the leading shippers in any leading industry anywhere without naming ners of DIAGRAPHS in quantities of from 1 to 100 or more machines. (Also hundreds used by U. S. l British armies and navies and other departments.) That's why it will pay you to see and try the AGRAPH first.

A DIAGRAPH pays for itself. Simply ask us to-day to send you one prepaid. Give it a thorough l. Buy it if you like it. Otherwise return it at our expense. You need a DIAGRAPH right w—why wait?

Diagraph Stencil Machine Corp.

1605 Kingshighway Blvd., St. Louis, Mo.

WASHABLE BUSINESS MAPS



Will Help You Sell

National Map Company's large scale washable business maps are big sales helps. Mark on them with pen, pencil, crayons or water color paints. Outline territories, mark location of dealers, agents, branches, etc.; check up on salesmen, advertising, shipments, etc., etc. Visualize your market. Know at a glance the exact situation in any territory. When changes in the marking are necessary, simply wash the map with a sponge or damp cloth.

he Multi-Unit System, illustrated above, displays your maps to the best advantage, and saves both ime and office space. Various sizes and styles to fit any office and any business. Write for atalog and further information,

Invention is a Science!

You Can Learn How to Invent

—Spare Time Study at Home—

EDISON says, "Invention should be taught as a profession."

Invention is a product of imagination. Never was an invention made, except through accident, which was not the product of some man's brain. Anyone can invent if his mind is trained along the right lines. That is why the man who invents one thing usually invents half a dozen or a dozen things. His mind is trained along inventive lines. Anyone can learn to invent by studying the science of invention. And now, for the first time, a remarkable course teaches the science of invention in a way that anyone can learn quickly at home. Instead of groping in the dark you can now train your mind to think along the right lines in order to invent the things you have often thought of.

Fortunes Made in 10 Minutes

Fortunes have been made by men who have thought of an idea in a flash, and developed it in a few minutes. An invention is not a long drawn out process. It comes to you quickly, once your mind is trained. The man who invented the bottle top, the man who invented the crimped hairpin, the man who invented the thin lead automatic pencil, the man who invented the snap fastener—all of these men, perhaps, got their ideas in a flash, and founded their ideas as a result of a single idea.

Every man at some time or other has an idea of something he would like to invent, but his mind doesn't know how to work. He doesn't know what to do about it—doesn't know how to think along inventive lines—and soon some one whose mind is trained along inventive lines invents just the thing some one else thought of.

Every day, no matter what your work is, you have opportunities for using and learning things that are needed, and you could doubtless invent something in great demand if you only knew how to go about it.

This wonderful new course teaches invention from the ground up.

A Wonderful Course

25 simple lectures—not lessons—the most fascinating course ever written. It is like a story book, but teaches you the real fundamental science of invention, so that you know just what to do. Some of the subjects treated are: How to Develop the Inventive Faculty; The Logic of Invention; How to Look Up Invention; Different Kinds of Patents; How to Develop Your Ideas; How to Collect Data; How to Keep Legal Records of Inventions; How to Apply Scientific Principles and Laws; How to Make Tests for Inventive Reasoning; What to Invent; What Not to Invent; How to Obtain a Patent, and hundreds of other subjects which every inventor must know.

Write for Free Book

A wonderful book explaining the course in detail has been written and will be sent free to those genuinely interested. This book, "How to Become an Inventor and What to Invent," explains the course in detail, and proves that anyone can become an inventor who trains his mind. It may be the beginning of a fortune for you. If you have ever had an idea for an invention, or if you would like to become an inventor, and if you would like to know what to invent, send in your name at once on the coupon below.

NOW! Only a limited number of these books are available for free distribution. Send in your name at once if you would like to have a copy.

Are You Planting the Seeds of Success?

How much of your income are you regularly setting aside in readiness for the proverbial "rainy day"?

Are you among those who are putting off the preparation for their future because of present inconvenience?

Save Systematically

One of the most profitable ways to save is to invest in high grade securities with attractive income returns.

The opportunities to buy this type of security have, because of the small purchasing power of the majority, been confined to a few commonly known as capitalists.

The Monthly Instalment Plan

makes it possible for a person of restricted buying power to participate in the profitable purchases that can be made. This plan is also used by investors of ample means enabling them to secure greater holdings than they otherwise could.

A Descriptive Booklet

of our "Monthly Instalment Plan" will be sent to you with our compliments if you are interested in saving money by means of careful investing.

This Coupon Is for Your Convenience

A $1000 RAISE

"—Williams is making $1000 a year more than you are, but he is leaving the first of the month.

"You may not know it, Carter, but I've had my eye on you for some time—in fact, ever since I found out that you were using your spare time to read up on our business. That study has paid you, and us too, mighty well.

"Judging from the way you made good in your other positions I am convinced that you have the training and the ability to do Williams's work. Therefore, beginning with the first of the month you will be promoted to Williams's place at $1000 a year more than you are now getting."

You Want a $1000 Raise Yourself

and a position of which you can be proud. Our PROMOTION PLAN will help you get it. Carter's case is only typical of thousands of others who got big money and real jobs through our PROMOTION PLAN. It will work just as happily for you.

If you were to look through our files, you would find case after case of big success. Men and women with no more and probably less ability than you have are making good with astonishing progress. There is no reason why you should lose out in getting more money and substantial promotion. Luck or pull won't give it to you but—the PROMOTION PLAN will.

DON'T TURN THIS PAGE until you have made up your mind to find out HOW TO GET A $1000 RAISE. Put a mark on the coupon against the line of work in which you are interested and we will send you full information on our practical PROMOTION PLAN. Mark and mail the coupon today.

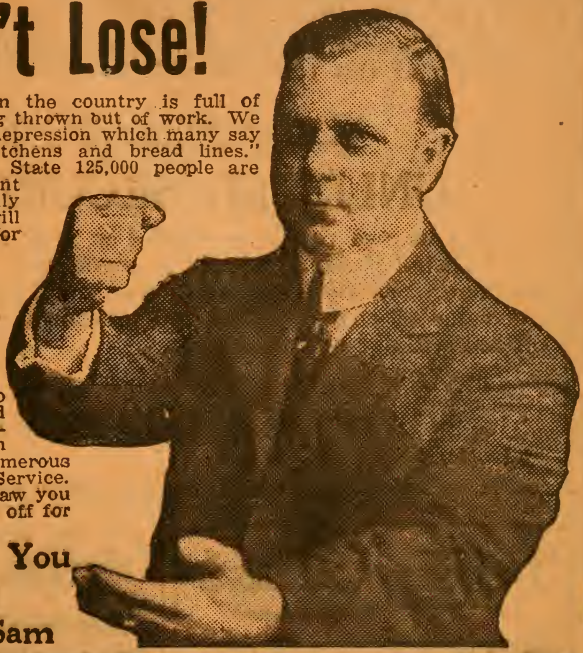
Now Is the Time to Get a Job You Can't Lose!



Every newspaper in the country is full of stories about men being thrown out of work. We are facing a period of depression which many say will lead to "soup kitchens and bread lines." Already in New York State 125,000 people are idle. "At the present rate," says the Daily News Record, "there will soon be two workers for each job."

Tens of Thousands Out of Work—More Being Laid Off Daily

Now is the time to get a job that hard times don't affect—working for Uncle Sam in any of the numerous branches of the Civil Service. According to Federal Law you cannot be fired or laid off for any reason.

Let Me Train You For a Job With Uncle Sam

You must pass a Civil Service Examination before you are accepted. There are certain things you MUST know. It is my business to PREPARE you for the examination so you can pass successfully. Even college graduates fail in these examinations because they do not know how to answer the particular kind of questions asked by the Government. For eight years I was a Civil Service Secretary-Examiner, so I am perhaps the best qualified man in the country to coach you. I GUARANTEE to coach you until you succeed in GETTING A POSITION.

$1,600 TO $2,300 A YEAR—AND YOU GET IT
NO STRIKES—NO LAYOFFS—NO LOCKOUTS

Positions in the Government service pay as high as $3,000 to $10,000 a year! Hours are easy—eight or less a day. Vacation every year with full pay, work at home or travel, or work in Washington or at Panama Canal.

Get My Free Book—If you are an American citizen, 18 years old or more, you are eligible to a Government Civil Service Position. If you have a common, ordinary 4th grade education as a foundation I want you to have a copy of my splendid, fully illustrated book, telling you how to secure it. Send the coupon to-day or just a postal card. Find out now just how I can help you to land a steady, good-paying position with the U. S. Government, in the Railway Mail, Post Office, Rural Carrier, Departmental, Internal Revenue, Immigration, Custom House or Postmaster Services. Mail the coupon or a postal to-day. Address

Earn Extra Money at Home

(No Previous Experience as a Knitter is Necessary)

Thousands of the proud owners of a Gearhart Family Knitter are busy knitting socks. We sell at high profits for them. They help supply the enormous demand for our standard brand of woolen socks, called All-Wear. We guarantee also a good rate per dozen pair for knittting alone, the year round—and furnish yarn free with the knitting outfit.

Extra Money for Slack Times and High Prices

Knitting is a craft worth knowing. You can turn it to practical account any time at your convenience—and every member of the family, children included, can lend a hand. Saves money right along to knit the woolens that members of the household need. You can also keep as busy as you choose filling orders local dealers and neighbors are glad to pay good prices for. But you don't have to depend on neighborhood business when it comes to making money —we want all the All-Wear you can turn out, we pay you at a good profit rate per dozen pair for the knitting alone, and we guarantee you an all-year market for your All-Wear socks.

Let Gearhart Knitter Work for You

The Gearhart Knitter is positively the simplest, fastest, lightest knitter produced for home use. Saves you its modest purchase price in a month or two. Write at once for full information. Send for samples of Knitting, Profit Guide Book and other particulars, free.

GEARHART KNITTING MACHINE CO., Inc.,
Dept. 191, Clearfield, Penna.

Please send me my copy of the free Profit Guide Book, Knitting samples and full particulars about making money at home with the Gearhart Standard Knitter.

TAKE YOUR CHOICE!

Your Office Needs An ACME to Save Time and Labor

One pressure of the lever of Acme No. 2 and Midget punches, inserts the staples and binds your papers—certainly a tremendous saving of time and energy over all old-fashioned methods.

The Midget is a great deal better, safer and cheaper than any other method of binding and fastening papers, light fabrics, cloth, straw, braid or lace.

The Sure Shot is for all-around uses. In your file room it will keep clips and pins out of your files—and prove a convenience a hundred times a day for other purposes.

OTHER ACMES FOR EVERY POSSIBLE PURPOSE

These are only three models of the standard Acme line. They are all automatic, self-feeding and clog-proof. Scientifically built to serve some particular purpose best. If these models do not fit your requirements, write us to-day. We do, or we can, make any kind of stapling machine to serve your purpose exactly, whatever it is. Ask any dealer about the Acme family.

Or send for complete money and time-saving Catalog

How I increased my salary more than 300%

By Joseph Anderson

I AM just the average man—twenty-eight years old, with a wife and a three-year-old youngster. I left school when I was fourteen. My parents didn't want me to do it, but I thought I knew more than they did.

But no! My mind was made up. I had been offered a job at nine dollars a week and I was going to take it.

That nine dollars looked awfully big to me. I didn't realize then, nor for years afterward, that I was being paid only for the work of my hands. My brain didn't count.

WHEN one day, glancing through a magazine, I came across the story of a man just like myself. He, too, had left school when he was fourteen years of age, and had worked for years at a small salary. But he was ambitious. He decided that he would get out of the rut by training himself to become expert in some line of work.

So he got in touch with the International Correspondence Schools at Scranton and started to study in his spare time at home. It was the turn of the road for him—the beginning of success.

Most stories like that tell of the residents of great institutions who are earning $25,000 and $50,000 a year. Such stories frighten me. I don't think I could ever earn that much. But this story told of a man who, through spare-time study, lifted himself from $5 to $75 a week. It made an impression on me because it talked in terms I could understand. It seemed reasonable to suppose that I could do as well.

I tell you it didn't take me long that I came to mark and send in that familiar coupon. Information regarding the course I had marked came back by return mail. I found it wasn't too late to make up the education I had denied myself as a boy.

I was surprised to find out how fascinating a home-study course could be. The I. C. S. worked with me every hour I had to spare. I felt myself growing. I knew there was a bigger job waiting for me somewhere.

Four months after I enrolled my employer came to me and told me that he always gave preference to men who studied their jobs—and that my next salary envelope would show how much he thought of the improvement in my work.

Today, my salary is more than 300% greater than it was when I began my studies. That increase has meant a better home and all the luxuries that make life worth while.

What I have done, you can do. For I am just an average man. I had no more education to begin with than you have—perhaps not as much. The only difference is a matter of training.

TO every man who is earning less than $75 a week, I say simply this:—*Find out what the I. C. S. can do for you!*

It will take only a minute of your time to mark and mail the coupon. But that one simple act may change your whole life.

If I hadn't taken that first step four years ago I wouldn't be writing this message to you today! No, and I wouldn't be earning anywhere near $75 a week, either!

In every man's life there is one Big Moment when he makes the decision that either robs him of success—or leads on to fortune.

Your One Chance to Earn The Biggest Money of Your Life

HAVE you ever considered why our richest men come from our poorest boys? Isn't it a strange thing that it is almost invariably a young fellow who starts life without a cent in the world, without education, without influential friends—in short, without one single solitary advantage—who accumulates millions of dollars? Isn't it a miracle that inside of a comparatively few years a man can rise from abject poverty to fabulous wealth?

Astonishing, certainly—but mo important, it is wonderfully inspi ing. For it means that no man ne be held down by circumstances. On he knows the millionaire's secre he can put it into operation regar less of all obstacles. His fanci handicaps simply vanish into thin a He suddenly finds that everythi he touches turns to gold—mon flows in upon him—fortune showe him with its favors. Everything wants seems to come to him just surely and easily as day comes aft night.

The Secret That Makes Millionair

But millionaires are not the on ones who use this secret. It has ma every great man of history. Thin of Napoleon—an unknown Corsic soldier in the ranks—then sudden startling the world with his meteo like rise, overthrowing empires, r shaping the destinies of nations!

What is this amazing secret that
hn work such wonders? It is just
his: **The thing behind all big
chievement, whether in business, po-
tical or military life is Opportunity.**
he man who wins is the man who
es his opportunity and seizes it.
he man who never rises above the
t is the man who lets his oppor-
nity pass.

To every man there comes one BIG
pportunity—the golden chance of his
fe. And in the moment he decides
or or against that opportunity—
hether he will seize it or let it pass
—he decides the whole future course
f his life.

How often you hear a man say: "If
nly I had recognized my opportunity
hen it came—if only I had taken ad-
antage of it—I would be a rich man
)-day."

The Graveyard of Neglected Opportunities

The world is full of such men—
ey plod along year after year—
aving away, hoping that somehow
ings will take a turn for the bet-
r. But their chance for success is
ne—it lies buried in the graveyard
f neglected opportunities.

On the other hand, let a man see
nd grasp his big opportunity—no
atter how obscure he may be, how
oor, how lacking in advantages—
nd his sudden rise to success will
stonish the world.

Read the life of any millionaire
nd you will find this to be so.

Choose Between Low Pay and Magnificent Earnings

This very minute **you** may be face
) face with **your** BIG opportunity
—**your one** chance to earn the big-
est money of your life! Right now
our decision may mean the differ-
nce between a life of plodding,
outine work at low pay and a career
f inspiring success and magnificent
arnings.

For now you are offered the very
pportunity that has made other men
ich, that has brought them more
oney than they ever dreamed of
arning.

It is the same opportunity that
fted Charles Berry of Winterset,
)wa, from $60 a month as a farm-
hand, to $1,000 a month. It brought to C. W. Campbell of Greensburg, Pa., a clerk on the railroad, a position that paid him $1,562 in thirty days.

These men and hundreds more have found their Big Opportunity in the wonderful field of Salesmanship. They are all Master Salesmen now. They are earning the biggest money of their lives—more than they ever thought possible—they are engaged in the most fascinating work in the world—they are independent, come and go as they please—they meet big men—every minute of the day is filled with thrilling variety.

Your Big Opportunity may be here too, in the wonder field of Salesmanship. Perhaps you say you have never even thought of becoming a Salesman. But before you decide one way or the other, examine the facts for yourself. See what Salesmanship offers you—why it is the best paid of all vocations—why there is no limit to what you may earn. Read the amazing proof that no matter what you are doing now, you can quickly become a Master Salesman in your spare time at home—read how the National Salesmen's Training Association in its nation-wide search for men to fill the great need for Salesmen, has devised a wonderful system that reveals to you every Secret of Selling. See how this famous organization helps you to a good position in the line of Selling you are best fitted for.

The opportunity that the N. S. T. A. offers you may be your *one* chance to earn the biggest money of your life, as it has been for hundreds of others. But whatever you do, don't pass it by without getting the facts.

Facts That Will Amaze You—Sent FREE

Mail the coupon below. This will not cost you a penny—it places you under no obligation. It simply means that you will receive, entirely FREE, a wonderful, illustrated Book on Salesmanship and Proof that you can be a Master Salesman. You will receive, also, the personal stories of men throughout the country who to-day are enjoying magnificent success and earning five, ten and fifteen times as much money as ever before.

Address National Salesmen's Training Association, Dept. 50-E, Chicago, Ill.

**National Salesmen's Training Association

LEARN Autos and Tractors

I want immediately to get in touch with live wire, energetic men who can be trained for positions I am asked to fill in the Auto and Tractor Service Business.

Make $150 to $400 a Month

Big Money is waiting for Trained Mechanics. Wires like this one must be answered: *I'll pay $200 for a good mechanic.*" But don't stop at the $200 job, or even at $400. Garage owners grow wealthy, if they are **trained.** Some make as high as $40,000 to $50,000 yearly. It's all in **knowing how.** I make a business of teaching you **how to make more money.**

Largest Operator Auto & Tractor Schools in the World

Many times I have been asked to give a formula for Success. Here is one I have followed throughout my life: **Training plus hard work plus a paying business equal success.** Any man who is trained for his job: who works hard at it; and who is in a business which pays well is bound to be a success.
HENRY J. RAHE.

Take Your Pick of 8 Big-Money Jobs

1. Battery Expert, $40 to $75 wk.
2. Garage Owner, $400 to $1500 mo.
3. Trouble Shooter, $7 to $15 day
4. Electrical Expert, $40 to $75 wk.
5. Welding Expert, $8 to $12 day
6. Vulcanizing, $150 to $350 mo.
7. Tractor Operator, $8 to $15 day
8. Salesman, $200 to $450 mo.

Rahe Auto &

Some Businesses Pay Well—Others Don't. Does Yours?

Motorists spend money lavishly on their cars. This makes the Auto Service Business a Big-Pay Business. Garage owners and their assistants make **real Money**--enough to *live well on.* Does your business pay well? If not, **change now** to a business where there is lots of money--now and all the time. Change to the Auto Service Business.

Thousands of Good Farmers Become BETTER Farmers

Farmers now must know Motors. So thousands yearly come to Rahe Schools to learn about Autos and Tractors--and then go back to the farm. They are BETTER Farmers, they know how to make repairs on their motorized machinery, they save thousands of dollars yearly and also care for their neighbors' machinery -- **make MONEY.** Farm men from 15 to 50 years old learn the Rahe-Way.

RAHE MASTERS TRAIN YOU

I rolled up my sleeves and taught the first classes in the original Rahe School 14 years ago. Now I have scores of RAHE Master Instructors to help me. I have trained **them** to help me efficiently train **you.** They are mainly RAHE Graduates—and I am always looking for more men who will make RAHE Master Mechanics.

LEARN MOTORS UNDER RAHE MASTERS

NOW
3 Big Rahe Schools

have three completely equipped Auto and Tractor Schools—in Chicago, Kansas City and Cincinnati—these are necessary to properly train the thousands who yearly attend my schools.

If you want to make more money · Know how to do one thing well.

om $2,000 to $200,000—these e the gross incomes of garages.

ten men start garages on $100 capital later reach an income high in the thousands. w? They **know** the business—they **are trained** n. To succeed in any business, you must be **solute master** of it. Become a Rahe Master Motors—know the fascinating secrets of elecity combustion, etc.—learn all this on live, ning, throbbing motors. Learn in the Rahe ools, where the famous Rahe-Way, which you e heard about for years, is taught. There is hing mysterious about the Rahe-Way—it is a tem in which you do the actual work you will et after you graduate. You will be able to do hard jobs.

3 Billion Dollars

will be spent this year on auto and tractor upkeep. Think of it—$3,000,000,000. Few know there is so much money in the Auto Service business. That is why there is so little competition. It is estimated that there are 50,000 openings for garages today--and more cars are being built every day.

Learn in 6 to 8 Weeks

You may be a MasterMechanic in from 6 to 8 weeks. Begin this interesting and fascinating training NOW.

PLAY THE HAWAIIAN GUITAR

Just Like the Hawaiians

OUR STUDENTS SAY:

I have finished all the lessons and can play better than I ever dreamed I could. Your way of teaching can't be beat. Anyone can learn who will half try. I think your way of teaching is wonderful. ELVEN EDDY, Eugene, Oregon.

Practised the lesson four times and can play Aloha. H. GUFFY, Alliance, Ohio.

Learned the first lesson from memory in a very short time. Lessons are not at all difficult. EDITH HEERS, Story City, Iowa.

I am certainly well pleased. MISS ONA WOODIN, Akron, Ohio.

Getting a great deal of pleasure out of my Guitar. STARR ROSE, Tonopah, Nevada.

Lessons are simple and easy to learn. WILLIAM C. KERN, Ann Arbor, Mich.

I find it very simple to learn. Instructions are clear. JESTINAH BOWLAND, Mendon, Ohio.

I don't see how any he man can do without one. PVT. THOS. B. SADLER, Ft. Hancock, N. J.

Our method of teaching is so simple, plain and easy that you begin on a piece with your first lesson. In half an hour you can play it! We have reduced the necessary motions you learn to only four—and you acquire these in a few minutes. Then it is only a matter of practise to acquire the weird, fascinating tremolos, staccatos, slurs and other effects that make this instrument so delightful. The Hawaiian Guitar plays any kind of music, both the melody and the accompaniment.

Our complete course of 52 lessons includes FREE a beautiful Hawaiian Guitar all the necessary picks and steel and 52 pieces of music.

Special arrangements for lessons if you have your own Guitar

Solid gold mounting. Has a guaranteed genuine Tifnite Gem almost a carat in size. Price $12.50; only $3.50 upon arrival. Balance $3.00 a month.

Tooth Belcher Ring
Solid gold 6-prong tooth mounting. Guaranteed genuine Tifnite Gem, almost a carat in size. Price $12.50; only $3.50 upon arrival. Balance $3.00 per month.

Put It Beside a Diamond

In appearance and by every test, these wonderful TIFNITE GEMS are so much like diamond that even an expert can hardly tell the difference. Have wonderful pure white color and diamonds of the first water, the dazzling fire brilliance, cut and polish. Stand every diamond test—fire, acid and diamond file. To introduce TIFNITE GEMS into every locality, we will send them absolutely free and on trial for ten days' wear. Pay only $3.50 on arrival; balance $3.00 a month, if satisfactory.

Solid Gold Mountings

TIFNITE GEMS are set in solid gold mountings, exclusively fashioned in the latest designs. Send coupon—no money—for your choice today. No reference—no obligation. If you can tell a TIFNITE GEM from a genuine diamond, or if for any reason you do not wish to keep it, return it at our expense.

How to Order

Cut a strip of heavy paper so that the ends exactly meet when drawn tightly around second joint of finger on which you want to wear the ring. See that the measuring paper fits snugly without overlapping and be sure to measure at the second joint. Send the strip of paper with order coupon

THE TIFNITE COMPANY

511 S. Plymouth Court Dept. 1946 Chicago,

Send me Ring No.... on 10 days' approval. I agree to $3.50 upon arrival, and balance at rate of $3.00 per mo If not satisfactory, I will return same within 10 days at expense.

In ordering ring, be sure to enclose size as described ab

JAMES BERGMAN 37-39 Maiden Lane, Established 1896 **NEW YORK**

WEALTH, HONOR, RICHES

Do not depend upon opportunity or intellectual brilliancy of any kind, because it is well known that uneducated people often acquire great wealth, while cultured and talented people remain in poverty.

Again, they do not depend upon capital, because many men with capital lose what they have, while others with no capital acquire phenomenal wealth.

Whatever finds a place in human experience is the result of the operation of natural laws, and the determining factors are therefore within your own control.

This may seem "too good to be true," but if you will consider that by the touch of a button or the turn of a lever science has placed almost infinite resources at the disposal of man, it becomes evident that there may be still other laws not generally known which contain even greater possibilities.

We have published a **Remarkable** little book, giving the conclusions of science concerning these laws, which we will send upon request. If you want to underwrite success on a magnificent scale. send for it.

Of the fathers of children born in N. Y. State—(1919) 60,975 were 25 to 29 years old; 59,450 were 30 to 34 years old; 41,858 were 35 to 39 years old; 28,108 were 20 to 24 years old; 20,670 were 40 to 44 years old; 8,644 were 45 to 49 years old; 2,558 were 50 to 54 years old; 1,194 were 15 to 19 years old, and 1,054 were 55 years and over. The men of the last-named class only had more girls than boys born to them.

Of the motners, 69,249 were 25 to 29 years old; 61,242 were 20 to 24 years old; 47,792 were 30 to 34 years old; 27,383 were 35 to 39 years old; 11,526 were 15 to 19 years old; 8,100 were 40 to 44 years old; 673 were 45 to 49 years old; 51 were 10 to 14 years old; 19 were 50 to 54 years old; 6 were 55 years and over. The mothers who were 50 to 54 years old were the only ones who gave birth to more girls than boys.

Of the 221,630 children born in N. Y. State in 1919, those of foreign parentage numbered 108,589, of whom 35,817 had Italian parents; 25,459 had Russian; 14,872 had Austrian.

CAMPAIGN EXPENDITURES IN 1920.

Presidential and Congressional campaign expenditures in 1920, including the run in the preferential primaries, totalled at least $10,338,000, according to the report to the U. S. Senate, March 1, 1921, by Chairman Kenyon of the Committee on Privileges and Elections. The inquiry had been made by a sub-committee, which took testimony under oath. The committee reported the campaign expenditures in the interest of the Republican and Democratic Presidential candidates as follows, saying:

"The committee investigated the receipts and expenditures of money in connection with the candidacies of 17 persons, including avowed candidates in both the Republican and Democratic Parties and those not formally candidates, but in whose interests activities were apparent. In certain instances the financial interlocking arrangements of the various organizations in the interest of a candidate were of such a nature that it is difficult to arrive at a specified sum as representing the total funds used. The following compilation, however, based both upon the testimony taken and an examination of the financial statements of receipts and expenditures as furnished the committee is, in our judgment, a fair statement of the approximate amounts of the campaign funds used in the interest of each candidate as found by the committee. The list is alphabetically arranged.

Dr. Nicholas Murray Butler, Republican	$40,550
Gov. Calvin Coolidge, Republican	68,375
Gov. James M. Cox, Democrat	22,000
Gov. Edward I. Edwards, Democrat	12,900
Senator Joseph Irwin France, Republican	None.
James W. Gerard, Democrat	14,040
Senator Warren G. Harding, Republican	113,109
Senator Gilbert M. Hitchcock, Democrat	3,337
Herbert Hoover, Republican	173,542
Senator Hiram W. Johnson, Republican	194,393
Gov. Frank O. Lowden, Republican	$414,984
William G. McAdoo, Democrat	None.
Senator Robert L. Owen, Democrat	8,595
A. Mitchell Palmer, Democrat	59,610
Senator Miles Poindexter, Republican	77,150
Senator Howard Sutherland, Republican	4,145
Gen. Leonard Wood, Republican	1,773,303
Total	$2,980,033

CAMPAIGN EXPENDITURES IN 1920—*Continued.*

The Kenyon committee stated the expenditures of the Republican and Democratic National and Congressional Committees in 1920, as follows:

Republican National Committee (does not include a loan of $306,233.50 to the Republican Congressional Committee, a major portion of which the records show was paid back, or the loan of $100,000 to the Senatorial Committee, which the records show was repaid in full)	$5,319,729.32
Democratic National Committee	1,318,274.02
Total	$6,638,003.34
Republican Congressional Committee	$375,969.(
Democratic Congressional Committee	24,498.(
Total	$400,467.1
Republican Senatorial Committee	$326,980.2
Bureau of Senatorial Elections, Democratic National Committee	6,675.(
Total	$333,655.2
Making a grant total of	$7,372,125.3

Aggregate receipts of the Republican and Democratic State Committees, respectively, in connection with the Presidential campaign of 1920, exclusive of funds received from the national organizations the two respective parties.

(In many instances these funds were used in part in connection with the local campaigns for State officers, etc.)

Master Electricity By Actual Practice

The only way you can become an expert is by doing the very work under competent instructors; in other words, *learn by doing.* That is the method of the New York Electrical School.

Five minutes of actual practice properly directed is worth more to a man than years and years of book study. Indeed, Actual Practice is the only training of value, and graduates of New York Electrical School have proved themselves to be the only men that are fully qualified to satisfy EVERY demand of the Electrical Profession.

The Only Institution of the Kind in America

At this "Learn by Doing" School a man acquires the art of Electrical Drafting, the best business methods and experience in Electrical Contracting, together with the skill to install, operate and maintain all systems for producing, transmitting and using electricity. A school for Old and Young. Individual instruction.

Over 7,400 Graduates Are Successful Men in the Electrical World

No previous knowledge of electricity, mechanics or mathematics is necessary to take this electrical course. You can begin the course now and by steady application prepare yourself in a short time. You will be taught by practical electrical experts with actual apparatus, under actual conditions.

The N. Y. E. S. gives a special Automobile Ignition Course as an advanced training for Auto Mechanics, Garage Men and Car Owners. The course covers completely all systems of Ignition, Starters, Lighting and other electrical equipment on automobiles, motor boats, airplanes, etc.

Let us explain our complete courses to you in person. If you can't call, send now for 64-page book—it's FREE to you.

STEINWAY

THE INSTRUMENT OF THE IMMORTALS

TO own a piano is one thing—to own the Instrument of the Immortals is another. The Steinway is the piano over whose keyboard Richard Wagner dreamed his visions and enriched the world. It is the Voice with which Liszt, Gounod, Rubinstein and their immortal fellows spoke to mankind. It is the piano of Paderewski—and the piano upon which Hofmann and Rachmaninoff are playing their way to immortality today. It is the chosen instrument of the masters and the lovers of immortal music.

TRAFFIC MANAGEMENT

Earn a real salary

Are you in a routine job—eager to get out of the rut, to earn real money? Big concerns today are literally searching the country for competent Traffic Managers—and are gladly paying them $5,000 a year, and better. They have plenty of "shipping clerks"—men whose knowledge of "Traffic" is limited to writing shipping tags and bills of lading. The man in demand is the man who can sit at the Traffic Desk and make decisions—who knows interstate commerce rulings and can see that they are complied with, can deal with railroad officials in matters of ratings, classifications, claims, and can see to it that shipments valued at millions of dollars go by the shortest, quickest routes, arrive when promised, and at the lowest possible cost.

Why not devote a few hours of your time each week to qualifying for a substantial position in this new profession? You can quickly get the necessary training by mail, in the quiet of your own home, without losing an hour from work or a dollar of pay. Under the famous "LaSalle Problem Method" you can learn to handle the very problems met daily by traffic managers of railroads and by big shippers. Thus by actually doing the work you become familiar with the duties of the traffic manager—you are prepared to step quickly into a big job.

By studying "Traffic Management" under the LaSalle plan you will be thoroughly trained in Freight Rates, Classification, Regulations and Management, Tariffs, Bills of Lading, Routing, Claims, Organization, Laws of Carriers, Interstate Commerce Rulings, Railroad Accounting, Statistics, etc. You will receive personal attention. Our big staff of seventy Traffic Experts will answer your questions, direct every step of your training, give you suggestions, counsel and advice.

Send for More Facts

Sign and mail the coupon and we will send you our catalog and complete information on the opportunities for the man trained in Traffic Management.

We will also send particulars about the moderate tuition fee and our easy payment terms—and a copy of our valuable book

"Ten Years' Promotion in One."

Mail the Coupon Now.

Direct from To Save

Brand New Oliver Typewriters for Half What They Used to Cost. Latest and Best Model. Sold Under a New Money-Saving Plan. Five Days' Free Trial. No Money Down—Over a Year to Pay.

Was $100 **OLIVER** NOW $49.50

Over 900,000 Sold

This is the offer of The Oliver Typewriter Company itself—a $2,000,000 concern. The Oliver Typewriter Company gives this guarantee: The Oliver Nine we now sell direct is the exact machine—our Model No. 9—which was formerly priced at $100.

We do not offer a second-hand nor rebuilt machine. So do not confuse this new $49.50 Oliver with other offers.

The $50.50 you now save is the result of new and efficient sales methods.

Formerly there were thousands of Oliver salesmen and agents. We had to maintain expensive offices in many cities. Other costly and roundabout sales methods kept the price of typewriters around $100.

By ending all these wastes and adopting a new plan we save the American public millions of dollars.

HOW TO SAVE

This is our plan: You may have an Oliver for free trial by answering this advertisement.

Or if you wish further information, check the coupon.

We will send you an Oliver Nine direct to your office or home for five days' free trial; it does not cost you a cent. Nor are you under the slightest obligation to buy.

We give you the opportunity to be your own salesman and save $50.50. You are the sole judge. There are no salesmen to influence you.

If you decide to keep the Oliver, pay $49.50 cash or $55 on instalments —$3 after trial, then pay us at the rate

the Factory
You $50.50

f $4 per month. If you do not wish to keep it, we even refund the transportation charges. That is all there is to our plan. It is simplicity itself.

A FAVORITE

This standard keyboard, visible Oliver has long been the world's model. If you remember, Oliver introduced visible writing.

Year after year, Oliver inventors have set the pace. Today's model—the Nine—is their greatest achievement.

Any stenographer may turn to the Oliver and operate it like any other machine. In fact its simplicity recommends it to people who have never used a typewriter before.

This Oliver Nine is the finest, the costliest, the most successful model we have ever built. If any typewriter is worth $100 it is this handsome machine—the greatest Oliver triumph.

Regardless of price, do not spend one cent upon any typewriter—whether new, second hand or rebuilt—do not even rent a machine until you have investigated thoroughly our proposition.

Used by Big Business

It is the same commercial machine used by U. S. Steel Corporation, National City Bank of New York, Montgomery Ward & Co., Curtis Publishing Co., New York Central, Hart Schaffner & Marx, Morris & Company, New York "World," Ward Baking Company, Jones & Laughlin Steel Company, Western Clock Company—"Big Ben," Encyclopaedia Britannica and a host of others. Over 900,000 have been sold.

rth $50.50

The Oliver Typewriter Company by this great, money-saving, price-reducing plan is entitled to your first consideration.

Note the two-way coupon. Send at once for the free-trial Oliver, or for our startling book entitled "The High Cost of Typewriters—the Reason and the Remedy."

This amazing book exposes the follies of the old selling plans and tells the whole story of the Oliver Rebellion. With it we send a new catalog, picturing and describing the Oliver Nine.

Don't turn over this page without clipping the coupon.

BOOKS YOU NEED

If You Are Interested In

MOTION PICTURES

The fruits of years of experience in every branch of Motion Picture activity have been put into these books by the experts who prepared them

Technique of the Photoplay

By EPES WINTHROP SARGENT

Tells how to plan photoplay plots and how to prepare scenarios, with ample examples of scenario form.

400 pages. Price $3.00

The Operator's Handbook

By F. H. RICHARDSON

Is the book that Projectionists swear by. Every point of moving-picture projection and projection-room activity is treated fully and clearly.

700 pages. Price $4.00

Modern Theatre Construction

By E. B. KINSILA

The book that helps architects, theatre owners and managers to plan new theatres and remodel old ones for safety, comfort and bigger profits.

270 pages. Price $3.00

Screencraft

By L. R. HARRISON

Like a "post-graduate" course, this book deals with the higher cultivation of plot-writing ability in making picture plays. Sample forms.

150 pages. Price $2.00

Picture Theatre Advertising

By E. W. SARGENT

Covers every form of activity that will bring crowds to the picture house, with dozens of tested plans and many proven "stunts." A complete guide for the "idea man."

300 pages. Price $2.00

Motion Picture Electricity

By J. H. HALLBERG

Electricians have raised their income by studying theatre wiring and the many other items of information concerning electrical equipment for picture houses treated fully in this book.

280 pages. Price $2.50

All of these books may be bought from Book Stores, Motion Picture Supply Houses or by sending the listed price direct to the Publishers

The Vital Reason for the Internal Bath

In Chicago recently there was held a gigantic political meeting that attracted a crowd of some 15,000 men and women of varying ages. On the outskirts of the assembly stood a physician with a friend. Turning to his friend, the medical man said: "I'll wager that in this vast throng there aren't 100 persons who are in anything like normal health."

Much as we dislike unpleasant truths, there is significance in that physician's remark for all of us. Few of us can honestly say that we are over 50 per cent. efficient.

We all want to be free from disease or ailment of any kind. We all want to have pure blood, normal heart, and sound nerves. We all want to enjoy restful nights and active, vigorous days. Yet most of us are half the time blue and worried, all the time nervous, and most of the time actually incapacitated by illness.

And why? Largely because we do not follow a few simple rules in the case of our physical condition. How many of us, for instance, practice internal bathing? True it is that this means of improving the physical condition is growing in use every day, but there are thousands of us yet who are strangers to the benefits of the Internal Bath.

The need for internal bathing is due simply to the fact that we have within our bodies such an organ as the large intestine, commonly called the colon. Accumulating waste as it does, the colon is the bane of our health. The waste is toxious, which means poisonous, and as the blood flows through the walls of the colon it absorbs these poisons and carries them through the circulation. That's what causes Auto-Intoxication—which in plain English means "Se Poisoning," a condition which pu down our powers of resistance a renders us subject to almost a serious ailment that may be prev lent at the time. And the wo feature of it is that few of us kn when we are "Auto-Intoxicated."

The proper kind of Internal Ba is Nature's own relief and correct —just warm water, which, used the correct way, cleanses the col thoroughly its entire length a makes and keeps it sweet and pu

The effect on your physical co dition is little short of marvelo Your eyes take on a new spark your step a new vigor. Your nerv relax, your appetite improves, a your sleep becomes more restf more refreshing. You feel re-ma

To really understand the Interr Bath and all that it accomplishes, o should read the very interesti booklet by Dr. Chas. A. Tyrrell, t inventor of the "J. B. L. Cascade Dr. Tyrrell's own life was saved a prolonged by Internal Bathing, a he wrote on the subject like the en nent authority that he was. T booklet, which is entitled "T What, The Why, The Way Internal Bathing," will intere every man and woman. All that necessary to secure this booklet to write to Tyrrell's Hygienic Ins tute, No. 134 West 65th St., Ne York City, and mention having re this article in the World Almana The booklet will be mailed to y free of all cost or obligation.

There is nothing so important the kind of health which keeps t fit, confident and enthusiastic f the day's work; and as the gettin of this Book involves no expens why not write for it now, while is fresh in your mind?

JOSEPH PULITZER.

April 10, 1847 ✝ October 29, 1911.

CONFERENCE ON LIMITATION OF ARMAMENT GREW FROM WORLD'S PLEA.

Bearing in mind in 1921 the injunction of its founder, Joseph Pulitzer, to fight always for progress reform, and having led the campaign for disarmament in advance of any other demand therefor, The rld covered the Washington Conference on Limitation of Armament in a comprehensive way.

Its noteworthy exploit was the bringing from England of H. G. Wells, author of "The Outline of History" a foremost writer, to contribute a series of critical observations on the conference. Mr. Wells's articles e individual in character and provoked widespread discussion. They were reprinted by about forty sra;ers in America and other countries, in connection with The World. The London Daily Mail, cre le associated newspapers, when he failed to write along the lines of its own policy, refused to publish articles and they were printed thereafter by the London Express.

Other writers on The World whose conference work was distinctive included Charles Michelson, head he Washington bureau, who wrote the leading news stories of the sessions; Joseph W. Grigg, who came r from the London bureau of The World; Lincoln Eyre, from The World's Paris bureau; Adachi Kinuke, whose articles on Japan and the Oriental and Pacific questions were authoritative; Charles Merz,) also wrote expertly on the Oriental situation, and Henry W. Nevinson, whose articles appeared simulcously in The World and the Manchester (England) Guardian.

The World was the only New York newspaper to have a staff representative on the Paris when it brought rshal Ferdinand Foch and his party to the United States, and as a result, The World received by wireless, lusively, the Marshal's first greeting to the American people, and the only exclusive, formal interview en by the Marshal at any time during his tour; a comprehensive story of the Marshal's first ocean voyage, an interview with Mme. Foch, got by the same correspondent, Miss M. E. Clemens, when in France.

THE WORLD'S CAMPAIGN FOR DISARMAMENT.

The World's campaign for disarmament began with an editorial on "The Crime of Competitive Armats" on Dec. 19, 1920, in support of Senator Borah's resolution asking the President to enter into negoiations with Great Britain and Japan looking to a 50 per cent. reduction of naval expenditures for five rs. On Dec. 26, one week later, The World printed letters and messages of indorsement of the editorial n President (then Senator) Harding and from statesmen, Judges, Senators, Governors, representatives of or, Generals, Admirals, manufacturers, clergymen, editors, bankers, Presidents of universities, Chambers Commerce, scientists, and from persons eminent in the professions, in commerce and in the trades. There e cable responses of approval from abroad, from England, France and even from Germany, Maximilian rden exclaiming, "The World leading America and America leading the world on the road to real world ce in disarmament." Figures were produced in support of the demand by Dr. E. B. Rosa, Chief Statistician he Bureau of Standards, showing that the pre-war tax per capita in the United States had been $4.70 l had been raised by the war to $130.32.

In the progress of the campaign The World pointed out that battleships and cannon lead a country) war rather than protect it from that evil. Following the publication of heartening messages from all ntries, The World suggested that the churches take up the cause, and there was general response to this . Bishop W. T. Manning in his New Year sermon said: "Disarmament is the only means of preserving world from bankruptcy and civilization from ruin." Cardinal Gasparri cabled, in the name of Pope nedict, strong indorsement of the movement.

American correspondents for foreign papers cabled The World editorials abroad, and responses came in torials of representative newspapers in Great Britain, France and Italy. Argentina, Canada, Australia l Japan joined in the newspaper movement. Viscount Uchida, cabling from Japan, said: "Perhaps truer hope for the world's safety has arisen since the peace of Versailles than in the press campaign for armament inaugurated by The New York World. The voice of true America speaks once more, recalling rm-tossed humanity to peace and sanity." Canvass of both Houses of Congress by The World disclosed t Senators and Representatives had been flooded with letters and telegrams urging them to do everything sible in furtherance of The World's disarmament plan. Congress thereupon cut down appropriations the army and navy and adopted a resolution authorizing the President to call an international conference, l that was one of the first important acts of Mr. Harding when he became Chief Executive.

BINDING UP THE WOUNDS OF WAR

As in the preceding year, and as it is likely to be in more than one year to come, the chief care of The rld's editorial policy in 1921 was to urge upon the Nation the great task of binding up the wounds of war l hastening the return of peace. Useless, it seemed to The World, to cry out that peace had come when ad not come; useless to seek "normalcy" either in national or international affairs while neglecting the ans by which the normal amenities of life could alone be restored. While holding still that our entrance o the League of Nations was for the United States the path of duty and for Europe the way of safety, s World was ready to welcome any effort sincerely made to achieve disarmament and the allaying of hostile judices. By coming early and strongly to the support of Senator Borah's resolution declaring for a naval lday agreement between Japan, Great Britain and the United States, it practically compelled the Harding ministration to take up the question or go bankrupt in public opinion. When the President called the shington Conference for the Limitation of Armaments and on Far Eastern Questions, The World praised effort as a step in the right direction.

No American newspaper more unreservedly supported Secretary Hughes in his speech opening the ference as its presiding officer, in which he proposed the scrapping of hundreds of tons of naval vessels the three great naval powers and an agreement to limit construction for ten years. Whatever may be final result of the conference, The World begins the new year with the hopeful view that no great rt undertaken in that spirit can be wholly vain.

No national or local issue of commanding size developed during the year to draw attention from the minent crisis of civilization left staggering by the war and by warlike apprehensions and provocatives t unhappily survived the great upheaval. Intimately connected with the armament problem was that Federal taxation; and The World was urgent in demanding real retrenchment in Washington; it was appointed by the passage of a tax bill which suited neither the country nor its authors. Here intelligent rt must be continued to compel a better policy.

The World has consistently urged the modernization of the Charter of New York City, has called attenn to the incidental cruelties of the Three-per-Cent. Immigration Law and demanded a saner method of alling immigrants. It has continued to insist that Mexico be treated in a friendly spirit and has thus ed in modifying the tone of jingoism which, largely for campaign effect, the Republican Party used toward xico in 1920.

It has continued to assume toward Ireland that helpful attitude for which Joseph Pulitzer more than rty years ago set an illustrious precedent, believing that nothing could more conduce to friendly relations ween Great Britain and the United States than a settlement of the centuries-old feud in the Green Isle. d, without sympathy for the excesses of the saloon or desire for its return, The World has continued to k such a modification of the Volstead act as shall serve real temperance and make possible the use of at wines and beers where the vile wares of the bootlegger are now poisoning the people.

FOREIGN SERVICE REACHED FAR CORNERS.

In Great Britain the fighting in Ireland and the labor troubles in England gave the Government a busy

year; in France the Polish conditions and the echoes of the Ruhr, together with the political fighting, France a troubled year. Ex-Emperor Charles's two attempts to capture the Hungarian throne pl more romantic than dangerous. This paper told of them all; and the famine in Russia and the troub and around Turkey. In getting the news of the famine in Russia, The World collaborated with the chester Guardian, sending Arthur Ransome to the scene of distress, Samara; and Herbert Pulitzer ad sympathetic touch.

James M. Tuohy, this paper's London correspondent, covered the Irish crisis with the knowledge veteran and the faculty of a trained news-gatherer. From De Valera's return to Ireland, just before th ginning of the year, to the conferences in Scotland and London, The World's Irish stories were read deep feeling in America. The advent of Gen. Smuts in the proceedings gave an added interest which World quickly seized and printed, doing so fully.

The coal war which began in April and which threatened to tie up all the industries of England was covered by the London office of The World. George Harvey's first appearance in England and his discussed speech before the Pilgrim Society in London, May 19 last, was printed fully and interesti as was the visit of the Crown Prince Hirohito of Japan.

In France, Lincoln Eyre had many important assignments. The break between England and F over the Silesian line stirred both countries early in the year. Premier Briand took office in January all the difficult questions he had to deal with were presented to The World readers as they succeeded other. Mr. Eyre went to Geneva in September at the second assembly of the Council of the Leag Nations; there also was held the election resulting in an international tribunal. Mr. Eyre accomp Premier Briand to America.

In March, Arno Dosch-Fleurot went to Kovno to find out what was happening to the Bolsheviki. peasants had begun an advance on Moscow and a revolutionary movement gave the impression Communists were to be ousted. Mr. Dosch-Fleurot then went to Silesia to report the plebiscit thence to Vienna to report ex-Emperor Charles's first attempt to grasp the Hungarian throne; t Berlin, where he sent the first story of the tender of labor to France by the Germans; also tellir publicans in Germany forming groups to prevent a coup, being a precaution against Comr risings and Bavaria's Royalist tendencies following the strike in the Halle district. In July Fleurot followed his earlier Kovno story by showing Russian leaders were building up a d Later he went to the scene of ex-Emperor Charles's second coup, which ended in the capture o his banishment to the island of Madeira.

The rise of Hugo Stinnes in Germany, due entirely to the war, was treated in the most inter ner by this World writer, and later the Wirth Cabinet struggles, the spectacular fall of the mark great activities in manufactures all over Germany.

ITALY ADOPTING AMERICAN IDEAS.

From Miss Baskerville The World readers were treated to a series of articles on the industrial nomic conditions in Italy, the central point being whether industry or agriculture would be mo to the country. Venice also was shown interestingly springing up to date, with American ide and methods. Italy, wrote Miss Baskerville, is rebuilding hundreds of her war-wrecked ch depressing news to America from Italy was the death of Enrico Caruso. Miss Baskerville we to Naples and gave a picturesque and sympathetic account of the death, of the mourning an what followed toward the distribution of his estate.

From The World's office in Tokio came several important despatches bearing on the Armament Conference in Washington. During 1922, also, the Tokio office will be of inter readers.

MEASURES ADVOCATED BY WORLD MADE LAW.

During the 1921 session of the New York Legislature many measures advocated by The enacted. One of this paper's chief achievements was the passage of a resolution broadenin of the Lockwood Housing Committee, enabling it to inquire into high finance as related to trades situation.

The World was instrumental in obtaining the Anti-Theatre Ticket Speculator Law. It also about a change in bills to abolish the Daylight-Saving Law so that municipalities might enact their ow light-saving ordinances. It was successful in its campaign against the search-and-seizure and other d features of the State Prohibition Enforcement Law.

The World's Albany bureau, headed by Charles S. Hand, warred in daily despatches of bad fea of bills, which, as a result, were either killed in Senate or Assembly or vetoed by Gov. Miller. Parti analysis was made of a series of bills affecting tenure of office and pay of men in the New York Police De ment. One of these bills, assailed by The World and later vetoed by Mayor Hylan, became the su of inquiry by the Meyer legislative committee.

THE WORLD TOLD FACTS ABOUT KU KLUX KLAN.

The World on September 6 commenced the publication of a series of articles telling the truth a the Ku Klux Klan. Twenty-six newspapers, in widely separated sections of the United States, joined World in the publication; some had been invited to participate, others requested The World to let use the articles. All these newspapers realized that the only motive back of The World's publicatior public service. It was their desire to share in this service, and The World is proud that they asked assurance of its traditional accuracy and fairness before they saw their way clear to co-operation.

In New York, crowds of people waited at the publication offices of The World until after midn in order that they might get the first copies of the papers as they came from the presses. In other c where local newspapers were not printing the series, record prices were paid for copies of The World— places reported Worlds bringing 50 cents a copy. It was a crowning tribute to the thoroughness with v The World's self-imposed task was performed that Congress, when it undertook to investigate the Ku Klan, was guided almost entirely by the array of facts presented by The World. This was indeed a tr to The World's ability to do a big thing in a big way; to perform a disagreeable task with justice and fairness; to handle, without sensationalism, one of the most sensational news developments of years.

The World is proud that the completed record shows no evidence either that it was terrified by th or was goaded by abuse into departures from its object of presenting the facts honestly and without aggeration.

FIRST IN LABOR AND INDUSTRIAL NEWS.

During the year, The World has maintained its position as first in labor and industrial news. Stan out above the general excellence of this feature of its service to its readers were its reports of the bit fought convention of the American Federation of Labor, and the railroad troubles, by John J. Lear and a review and forecast on the general situation by that member of its staff on Labor Sunday. World readers have at all times had the advantage of labor news in the making, at times weeks in adv of its contemporaries, it has been free from propaganda, and its reports are as closely followed by bus and employing interests as by those engaged in union affairs.

OTHER SERVICES.

While the selecting of President Harding's Cabinet was under consideration, The World took pai see that the people were made acquainted with the character of the men under consideration. Sp attention was paid to Harry M. Daugherty in a series of articles by Frank L. Hopkins, a summary of w President-elect Harding, then in Florida, caused to be telegraphed to him daily.

The World, following an investigation in November, revealed the cause underlying the wide def

rations in favor of two Italian laborers, Sacco and Vanzetti, convicted in rural Massachusetts. In a series six articles, written by Samuel Spewack, staff correspondent, The World traced the growth of the ovement from a little Boston office to the far corners of the globe, where the release of the two men was manded in vociferous appeals and exhibitions of violence.

The World was in the forefront in rendering aid to those confronted by the congestion in housing. is newspaper established last September a column in which questions relating to rent problems were swered. Through this column, conducted by Frank L. Hopkins, in co-operation with Junius Pendleton lison, counsel for the Mayor's Committee on Rent Profiteering, thousands of tenants were enabled to ure their rights.

CHANGES IN MOTOR VEHICLE LAWS.

As a result of a crusade to lessen automobile fatalities in New York City and State, The World won victory when changes in the motor vehicle laws were made. The paper printed exclusive stories giving e motor and license numbers of cars stolen daily in this city, and started a campaign against outlaw taxicabs d financially irresponsible drivers and owners. The World will continue this fight. Joseph A. Butler in charge of the paper's automobile department.

SPORTS DEPARTMENT ON BROAD LINES.

Sports in The World have been conducted on broad lines, with accuracy and authority as the aim. Daily ppenings have been carefully chronicled and big stories have been treated in a big way. Special attention as devoted to the international competitions in polo, golf and lawn tennis, while the Dempsey-Carpentier ut for the heavyweight championship of the world was covered by experts who recounted it to the last tail. Writers recognized as authorities in the various sports make up the sporting staff and include eorge Daley in racing and football, Monitor in baseball, Igoe in boxing, Davis J. Walsh in golf and other orts, and William Hennigan in baseball and track athletics.

It has been the policy of The World to make constructive suggestions from time to time in an effort keep sports up to the highest standard and free from contaminating influences. That policy will be ntinued. As usual, The Evening World's Sporting Department has been in 1921 one of the most comehensive, reliable and interesting in American journalism.

THE YEAR IN ART.

The happenings in the world of art have been carefully recorded by the Art Editor, Henry Tyrrell he season of 1921-'22 gives substantial assurance of a renaissance in applied design and the decorative afts and manufactures destined eventually to place America in the artistic leadership of the world. Typical the new type of princely art collections mentioned by The World during the year are Joseph E. Widener's quisition, at $750,000, of two historic Rembrandt portraits from Russia; Henry E. Huntington's purc $640,000, of Gainsborough's famous "Blue Boy"; and Michael Friedsam's purchase from a Gelder urce of two notable primitives—Albrecht Durer's "Saviour" and Quentin Matsys's "Rest on the ght to Egypt."

RELIGIOUS NEWS DEPARTMENT A FORCE.

The Religious Department of the Morning World published on three successive Sundays, begin ith Armistice Sunday, Nov. 6, letters from religious leaders expressing their attitude toward the conference. Communications were received from more than 150, representing all creeds. The re partment of religious news on Saturday mornings, to quote a former Moderator of the General Asse the Presbyterian Church, has "become a force and a distinct advance on all the religious features of ot pers (New York). It has lifted the religious feature to a dignified and challenging position and minist re rejoicing in it."

SUNDAY WORLD MAGAZINE ADVANCES.

The Sunday World Magazine during the year advanced itself to a new plane of distinction with respect the diversified character of both its literary and artistic features. Holding it to be its function to present rounded product, with the widest range of popular appeal, its pages have been replete with contributions distinct quality. Writers whose names are familiar and artists whose illustrations are always in demand ave collaborated in the product.

The discoveries of science and invention have had their places with simple ingenuities which engage e attention of puzzle workers on one page; for example, an article by a savant, and on another a versification om Oliver Herford. There were reproduced in picture form masterpieces of sculpture and painting. Plans r making New York even greater have been visualized by the brush of Biedermann. Karl K. Kitchen as touched on the high spots of European social life and Roth has given to the stories illustrative color. dward H. Smith's pen has contributed on the underworld, and Prosper Buranelli has kept readers informed the realm of music.

Alfred Frueh's caricatures have given a satirizing turn to the foibles of the moment. The eccentricities fashion have been submitted to the critical gaze of women. The lyrics and scores of current song hits were gular features. Tales of travel and adventure, exploits of champions in athletics and stories of the marvels the turf have added to the worth of the publication. Among the staff contributors not already mentioned re Arthur Benington, Louis Bernheimer, Sarah MacDougall, Ernest Brennecke, Charles Welton, Henry yrrell, Samuel Cahan, Lee Conrey, Gordon Rose and Margaret Fetherbridge.

Always The Sunday World Magazine aims to be truthful, informative; always it has superimposed s never neglected lighter and jollier features on a groundwork of real worth. In the fullest sense it is a omplete magazine, which would stand the test by itself were it not part of the publication from which it akes its name.

SUNDAY WORLD SCHOOL PRIZES.

For sixteen years the Sunday World has sponsored athletics in the public schools, maintaining a special epartment which has co-operated with the Public Schools Athletic League and the educational authorities n providing field days in all of the five boroughs. During the summer the department has given its support o the work of the Vacation Playground Association and the Parks and Playgrounds Association. The Sunday World Gardening, Walking, Swimming and Skating Clubs, each with a large membership of juveniles, are lso on the list. In all of these popular competitive activities, in which more than 200,000 youngsters have aken part during the year just closed, the Sunday World has provided the various prize medals, pins and rophies, and kept in operation the organization machinery for the various contests.

"The Sunday World," says Gustavus T. Kirby, President of the American Olympic Committee, "is pulling a strong oar in the boat of the Nation, and the goal is a sturdy, intelligent citizenry."

Gen. Wingate, the head of the P. S. A. L., who was present at the first contest given under field day auspices and who has kept in close touch with the work for sixteen years, says: "The Sunday World has established a standard of helpfulness with its field day work. It has also established an amazing total. More than a million boys have been made stronger, healthier and happier, being able to participate in the contests fathered by that newspaper. It is a record that must forever stand unbeaten."

EVENING WORLD EDITORIAL PAGE.

The greatest single public service rendered by The Evening World editorial page in 1921 was the vigorous campaign waged to supplement the protective housing legislation of 1920 with a further positive and constructive measure. This measure was the city ordinance exempting from taxation for ten years home construction up to the value of $5,000 per home on new housing projects. It met with covert opposition from many quarters, but was enacted as the direct result of constant publicity by The Evening World, which was its most active proponent. It has resulted in the construction of many homes.

In the municipal campaign The Evening World supported Henry H. Curran on the ground that he

was a capable and competent public servant who would introduce into the City Government those qu which the Hylan Administration had most conspicuously lacked.

In international affairs The Evening World editorials have earnestly urged limitation of arm and any national policy irrespective of party lines that promises co-operation with other nations serving peace and international good will.

Insistence upon respect for working contracts by both employers and employees and continue vocacy of the rights of informed public opinion in settlement of industrial conflicts have been the pr features of The Evening World's comment on industrial affairs.

EVENING WORLD'S ACHIEVEMENTS.

Among The Evening World achievements was the campaign carried against ticket speculation. activities of the speculators had grown intolerable. Nearly all the best seats in the theatres were up by them and sold at exorbitant prices according to the demand. This is also the case with baseb other amusements. The Evening World through Sophie Irene Loeb of its staff presented this evil Legislature and bills were passed to remedy the conditions. Governor Miller signed one—the Walton Act, which aims to rid the city of the sidewalk theatre ticket. The other bill was vetoed by the Go on the ground that it was unconstitutional. This matter is to be taken up again at the opening of th Legislature.

Unsuccessful attempts were made to raise the taxicab rates and an ordinance passed, after urg this newspaper, which for years has stood the test of the courts. The Evening World urged and s the opening of all piers for recreation during the hot weather; also the opening of the motion picture th during the summer to keep children off the streets. In co-operation with Sidney Cohen, President Motion Picture Owners of America, a large number of the proprietors co-operated and allotted a bl seats in the theatres three afternoons a week in the summer. Another work in the interest of childre boat-trip outings conducted by the Board of Child Welfare which administers the Widows' Pension a measure for years backed by this newspaper, has proved a boon to thousands of widowed mother children, and wherever possible this newspaper has aided this cause. A new building—the first Child W Building in the world—will be established the first of the year at No. 145 Worth Street, and this, to urged by this newspaper.

The Evening World continued its campaign against the coal monopoly and the high coal prices cl New York City—a state of affairs that has been constantly and vigorously exposed in Evening umns. After consultation with leading Senators at Washington, several bills were introduced in Co lleviate the conditions.

EVENING WORLD FISHERMEN.

The Evening World established, on April 4 last, a department "About Fish and Fishermen," am E. Simmons, who has angled in the Atlantic and Pacific Oceans as well as many inland w ding Lake Nicaragua, and entertains his readers with news as well as angling tidbits and exper nomied from a wide field.

EVENING WORLD'S MAGAZINE PAGE.

The Evening World's Magazine Page features were contributed by a specialized staff to which add e made in the persons of Margery Wells, a woman's fashion authority, Doris Doscher, physical c beauty expert, and Caroline Crawford, whose intimate understanding of girls made her new serial, heart of a Girl," a success. A series of articles by Sophie Irene Loeb, inspired by hundreds of letters re m Evening World readers, showed, from real experience, how home life can be made happier. Inte articles by Marguerite Mooers Marshall, Fay Stevenson and Marguerite Dean; On New York, b B. Johnstone and Major Joseph Caccavajo; contributions by Neal R. O'Hara and Bide Dudley, f hints and drawings by Mildred Lodewick, Roy L. McCardell's "Jarr Family," Dr. Charlotte C. mother and child articles; Emilie Hoffman's recipes and household suggestions—all were regular fe of the Magazine Page.

Maurice Ketten's daily humorous cartoons, "Can You Beat It," "The Day of Rest," etc., gave de comic strips including "Joe's Car," "The Big Little Family," "Little Mary Mixup" and "Katinka" a source of amusement. Charles Darnton's criticisms of "The New Plays," Bide Dudley's "About and Players" and Don Allen's "Screenings" covered the theatrical and motion picture fields.

THE KIDDIE KLUB.

Last Christmas the Evening World's Kiddie Klub gave two performances of its play in order to s the demand for seats; 8,000 children and parents were entertained by the spectacle at the Manhattan House. The Klub's mid-summer party last year was at Starlight Park; the weather was fine; the atten 20,000. Every attraction in the park was free to the children excepting the Kiddies' own show, the re of which laid the foundation of the Kiddie Klub Country Fund. Miss Eleanor Schorer, who is Cousin El to the Klub's 136,000 members, hopes to do a great good with this fund, the purpose of which is to ailing kiddies into the country for the summer months, build them up and bring them back well and he On October 5 Mr. Fortune Gallo gave the proceeds of a benefit performance of "Hansel and Gretel" to the fund.

BUREAU OF ACCURACY AND FAIR PLAY.

The World's Bureau of Accuracy and Fair Play completed the eighth year of its existence in July. primary purpose, as declared at the outset, is to promote accuracy and fair play in the columns of The W to correct carelessness, and to stamp out fakes and fakers. All complaints involving these question cluding libel actions, are turned over to this bureau and carefully inquired into and, if they are fou be well-grounded, corrections are made. A record is kept of each case investigated, with a card ind those responsible for articles complained of. Faking and chronic carelessness are punished by disn In practice the idea has worked out well. Members of The World staff, and its correspondents everyw have, with very few exceptions, worked in harmony with the bureau. The World's example has beer lowed by many other newspapers throughout the country.

Administered in the spirit of fair play the bureau has created good will and confidence often even complaints had in the beginning been resentful. When damage has resulted from erroneous publica and the person injured has shown a willingness to arbitrate in good faith and upon a reasonable basis, se ments have been made without recourse to the courts. The Rev. Dr. Daniel Bliss characterized the o tions of The World's bureau as "the Golden Rule applied to journalism."

The bureau has made a practice of opposing attacks and complaints that have no merit. In the stages of its operation it learned that there are lawyers in New York who make a specialty of stirrin libel litigation and who seemingly are not adverse to representing criminals and otherwise disrepu characters who sometimes bring suits on false and perjured complaints. A card index covering a p of more than twenty years reveals the names of lawyers who have made a practice of stirring up libel li tion, and whenever attempts are made to recover damages in these cases The World has spared ne trouble nor expense in fighting to the last ditch. As a result some lawyers have been disbarred or suspe from practice, and several notoriously crooked litigants have been sent to prison. For the investig of complaints the bureau has an abnormally long reach. It may call upon World correspondents in and every corner of the civilized world for information and assistance. The telegram, the cable and wireless are at its disposal. It has sent its trained investigators throughout the United States from M to California, to Canada, Mexico, and South America and to Great Britain and all the principal coun of Europe. As a result of the bureau's activities there has been a steady decrease in libel suits.

THE LEACUE OF NATIONS.

(Headquarters, Geneva, Switzerland.)

COUNCIL members (as of Nov. 15, 1921). *Acting President*—Paul Hymans (Belgium); Dr. V. K. Wellington Koo (China); Gastao da Cunha (Brazil); A. J. Balfour (Great Britain); Leon Bourgeois (France); Marquis Imperiali (Italy); Viscount Ishii (Japan); Quinones de Leon (Spain).

The League of Nations came into existence under the Treaty of Versailles, which went into force on Jan. 10, 1920. The first meeting of the *Council* of the League was held at Paris, Jan. 16, 1920. The *Council*, *Assembly*, and the *Secretariat*, constitute the League. The *Council* consists of the four principal Allied powers (France, Great Britain, Italy and Japan) as permanent members, together with four non-permanent members (Belgium, Brazil, China, and Spain. China was elected in place of Greece. The *Assembly*, which held its first meeting at Geneva, November-December, 1920, consists of representatives of all states members of the League. Accessory to the League are (a) *Permanent International Court of Justice;* (b) *Military, Naval and Air Commission;* (c) *Armaments Commission;* (d) *Supervision of Traffic in Arms;* (e) *Blockade Commission;* (f) *Mandates Commission*. The technical organizations under the League are: (a) *Advisory Economic and Financial Commission;* (b) *Advisory Commission for Communications and Transit;* (c) *Health Organization*. There is also the *International Labor Office*.

The League had, in November, 1921, fifty-one members. The *Council* held its thirteenth session in June, and an extra session in August, to consider the Silesian boundary question.

Members of *International Court of Justice*—Senator Rafael Altamira, of Spain; Prof. Dionisio Anzilotti, of Italy; Senator Ruy Barbosa, of Brazil; Prof. Antonio S. de Bustamante, of Cuba; Viscount Robert Cecil; Wayne Finlay, of Great Britain; Prof. Max Huber, of Switzerland; Prof. B. C. J. Loder, of Holland; Prof. John Bassett Moore, of the United States; Judge Didrick Galtrup Gjedde Nyholm, of Denmark; Prof. Rokuzo Oda, of Japan; Prof. Charles Andre Weiss, of France. Besides the eleven Judges just named, there are four Deputy Judges—Judge Frederik Valdemar Nikolai Beichmann, of Norway; Prof. Demetriu Negulesco, of Roumania; Dr. Wang Chung Hui, of China; and Judge Mihailo Jovanovic, of Jugo-Slavia.

By the terms of the Covenant of the League of Nations, the *Council* and the *Assembly* may deal with any matter within the sphere of action of the League or affecting the peace of the world. The *Assembly* meets once a year, at Geneva, on the first Monday in September. Each state, no matter of what size, is allowed three delegates only, and may only record one vote in the *Assembly*. The *Council*, one-half of the members of which are elected by the *Assembly*, is intrusted with the permanent conduct of affairs when the *Assembly* is not sitting.

The permanent *Secretariat* is the administrative organ which prepares the work of the *Assembly* and *Council*, and takes steps to carry out the decisions which those bodies have taken. It consists of a certain number of sections corresponding to the various activities of the League.

Should any member of the League resort to war in disregard of the engagements entered into under the Covenant, the other states members of the League, by virtue of Article 16, are bound immediately to break off all commercial or financial relations with that state.

The League has put a High Commissioner in control of the Free City of Danzig, and of the Saar Basin; has transferred the districts of Eupen and Malmedy to Belgium.

PRINCIPAL RECENT ACTIVITIES OF THE LEAGUE.

1. The co-ordination of all official international bureaus under the auspices of the League was begun by the placing of the International Bureau of Assistance at Paris and the International Hydrographic Bureau at Monaco under the direct control of the League.

2. On Aug. 12, 1921, the Supreme Council referred the Silesian question to the League Council, and two months later the League Council delivered a decision which subsequently was accepted by the Allied powers as well as by all the parties immediately concerned.

3. The Second Assembly met at Geneva from Sept. 5 to Oct. 5, 1921, forty-six nations being represented.

4. On Sept. 16, 1921, the Permanent Court of International Justice was finally and officially established through the election, by the *Council* and the *Assembly*, of eleven Judges and four Deputy Judges.

5. Three more states, Latvia, Lithuania and Esthonia, were elected members of the League on Sept. 22, 1921, raising the total membership to 51.

6. The Provisional Health Committee was formally established by the *Assembly* on Sept. 23, 1921.

7. The *Assembly* authorized a statistical investigation of armaments between 1913 and 1921.

8. The same body provided for the calling of an international conference to consider steps for the suppression of the private traffic in arms.

9. Through the direct intercession and appeal of the *Assembly*, Poland and Lithuania were brought to accept the basis for a settlement of their dispute about Vilna proposed by M. Hymans on behalf of the League *Council*.

10. An international commission was sent to Albania to investigate the grievances of that state against Jugo-Slavia and Greece. The League adjusted their boundaries, by mutual agreement.

11. Dr. Fridtjof Nansen, of Norway, was appointed League Commissioner for the relief of Russia.

12. On Oct. 6, 1921, an International conference met at Brussels under the auspices of the League to consider relief measures for Russia.

13. A League Commissioner was appointed at Constantinople for the purpose of directing the protection, relief and repatriation of deported women and children in Asia Minor and adjoining territories.

14. Up to Nov. 1921, 400,000 war prisoners had been repatriated under the direction of Dr. Nansen, acting on behalf of the League.

15. The dispute between Sweden and Finland about the Aland Islands was peacefully solved by a decision of the *Council*—accepted by both parties, the islands to remain Finnish under certain guarantees of autonomy. On Oct. 20, 1921, a convention for the neutralization and demilitarization of the Islands was adopted at Geneva by a conference of delegates from ten states under the auspices of the League.

16. On Oct. 25, 1921, the Third International Labor Conference met at Geneva.

INTERNATIONAL CONFERENCE ON TRAFFIC IN WOMEN AND CHILDREN.

The International Conference on Traffic in Women and Children, summoned by the League of Nations under Article 23 of the Covenant, met at Geneva from June 30 to July 5, 1921. It held six full sessions, all of which were public. Thirty-four states were represented and most of the great international associations concerned with social or moral progress and the protection of women and children had been invited to take part. Many of them had sent to the conference recommendations which were carefully examined, and although the United States had no delegates at the conference, numerous messages of sympathy with the work were sent from America, and the American Social and Hygiene Association was represented.

MEMBERS OF THE LEAGUE OF NATIONS.

(As of October, 1921).

Albania, Argentina, Australia, Austria, Belgium, Bolivia, British Empire, Brazil, Bulgaria, Canada, Chile, China, Colombia, Costa Rica, Cuba, Czecho-Slovakia, Denmark, Esthonia, Finland, France, Greece, Guatemala, Haiti, Honduras, India, Italy, Japan, Latvia, Liberia, Lithuania, Luxemburg, Netherlands, New Zealand, Nicaragua, Norway, Panama, Paraguay, Persia, Peru, Poland, Portugal, Roumania, Salvador, Serb-Croat-Slovene State, Siam, South Africa, Spain, Sweden, Switzerland, Uruguay, Venezuela.

The President of the *Assembly* of the League (elected Sept. 5, 1921) is Jonkheer Van Karnebeek, of the Netherlands.

Secretary General—Sir Eric Drummond, of Great Britain.

Postal Savings—The limit of an individual deposit has been increased from $1,000 to $2,500. No
t of less than $1 will be accepted for a deposit. Interest is allowed at the rate of 2 per cent. An account
y be opened and deposits made by any person of the age of 10 years or over, in his or her own name
by a married woman in her own name and free from any control or interference by her husband.
posits will be accepted only from individuals. No account will be opened in the name of any corporation,
ociation, society, firm, or partnership, in the name of any person as an officer of a corporation, association,
ociety, in the name of any person as a member of a firm or partnership, or in the name of two or more
sons jointly. No account will be opened in the name of one person in trust for or on behalf of another
son or persons. A person may open a postal savings account at any depository post office, but no person
y at the same time have more than one postal savings account either at the same office or at different
ces. Amounts less than $1 may be saved by purchasing 10-cent postal savings stamps. A postal sav-
s card, which is furnished free of cost, with ten postal savings stamps affixed will be accepted as a deposit
$1 either in opening an account or in adding to an existing account, or it may be redeemed in cash.
tal savings stamps are not valid for postage, and Postmasters will not give them in exchange for

postage stamps, nor give postage stamps in exchange for postal savings stamps. Deposits ... de by postal savings certificates issued in fixed denominations of $1, $2, $5, $10, $20, $50, $100, $... each bearing the name of the depositor, the number of his account, the date of issue, the nam... the ... pository office, and the date on which interest begins. Postal savings certificates are not ... nsfe... or negotiable. A depositor may exchange the whole or any part of his deposits for registered or co... United States postal savings bonds, issued in denominations of $20, $100, and $500, bearing in... at the rate of 2½ per cent. per annum, payable semi-annually, redeemable at the pleasure of the ... States after one year from date of issue, and payable 20 years from such date. Both principal and in... are payable in United States gold coin. The bonds are tax-free. The exchange may be made as of Jan... 1 and July 1 of each year.

Prepayment of Postage on domestic matter at time of mailing, by stamps affixed, is required. ... special permission, however, postage may be paid in money on matter of the first, second, third, and fo... classes when mailed in quantities.

THE ANCIENT AND MODERN YEAR.

THE Athenians began the year in June, the Macedonians in September, the Romans first in March l afterward in January, the Persians on August 11, the ancient Mexicans on February 23, the Moham- dans in July. The Chinese year, which begins late in January or early in February, is similar to the Mo- mmedan in having 12 months of 29 and 30 days alternately; but in every nineteen years there are seven rs which have 13 months. This is not quite correct, and the Chinese have therefore formed a cycle of years, in which period 22 intercalary months occur.

The Seasons.

			D.	H.	M.	
rnal Equinox,	Spring	begins March	21	4	49 A. M.	*Eastern Standard Time (Old).*
mmer Solstice,	Summer	begins June	22	12	27 A. M.

nter Solstice,	Winter	begins December	22	9	57 A. M.	

Morning Stars.

MERCURY—February 14 to April 24; June 18 to gust 7; October 15 to December 6.
VENUS—January 1 to February 9; November 25 end of year.
MARS—January 1 to June 10.
JUPITER—January 1 to April 4; October 23 to end year.
SATURN—January 1 to March 25; October 4 to d of year.

Evening Stars.

MERCURY—January 1 to February 14; April 24 to June 18; August 7 to October 15; December 6 to end of year.
VENUS—February 9 to November 25.
MARS—June 10 to end of year.
JUPITER—April 4 to October 23.
SATURN—March 25 to October 4.

CHURCH FASTS.

THE Roman Catholic days of obligation are: Jan. 1 (Circumcision of Christ); Ascension Day (forty days er Easter Sunday); Aug. 15 (Assumption of the Blessed Virgin Mary); Nov. 1 (All Saints' Day); Dec. 8 nmaculate Conception); Dec. 25 (Christmas), and all the Sundays of the year.

The Roman Catholic Days of fasting are the forty days of Lent, the Ember Days, the Fridays of e four weeks in Advent, and certain vigils or evenings prior to the greater feasts, while all Fridays of e year are days of abstinence from flesh meat. In the American Episcopal Church the days o fasting abstinence to be observed, according to the Book of Common Prayer, are the forty days of Lent. the mber Days, the three Rogation Days, and all the Fridays of the year except Christmas Day. In the eek Church the four principal fasts are those in Lent, the week succeeding Whitsuntide, the fortnight fore the Assumption, and forty days before Christmas.

EMBER AND ROCATION DAYS.

EMBER and Rogation Days are certain periods of the year devoted to prayer and fasting. Ember ays (twelve annually) about the beginning of the four seasons, are the Wednesday, Friday, and Sat- day after the first Sunday in Lent, in Spring; after the feast of Pentecost (Whit Sunday), Summer; after e festival of the Holy Cross, Autumn and after the festival of St. Lucia, Winter. Ember Weeks are e weeks in which the Ember Days appear.

Rogation Days occur on the Feast of St. Mark, April 25, and on the three days immediately preceding scension Day.

DIVISIONS OF TIME.

THE interval between two consecutive meridian ansits of a fixed star having no proper motion, or e interval during which the earth makes one abso-te revolution on its axis, is invariable. Very ghtly differing from this is a Sidereal Day, which the interval between two consecutive transits of e Vernal Equinox over any meridian. Vernal quinox is employed in two senses: it may mean ther the date when Spring commences, or else, as re, the point in the heavens occupied by the sun s ntre when Spring commences. The interval be-ween two consecutive transits of the Sun over any eridian is called an *Apparent* Solar Day, and its ngth varies from day to day by reason of the vari-le motion of the earth in its orbit and the inclina-on of this orbit to the equator on which time is easured.

A *Mean* Solar Day is the average or mean of all e apparent solar days in a year; it is equal to 1 day minutes and 56.555 seconds, when measured in uits of the Sidereal Day. *Mean Solar Time* is that own by a well-regulated clock or watch, while *pparent Solar Time* is that shown by a well-con-ructed sun-dial; the difference between the two at y time is the *Equation of Time*, and may amount 16 minutes and 22 seconds. The Astronomical ay begins at noon and the Civil Day at the pre-ding midnight.

The interval during which the earth makes one solute revolution round the Sun is called a *Sidereal ar*, and consists of 365 days 6 hours 9 minutes and 5 seconds, which is invariable.

The Tropical Year is the interval between two nsecutive returns of the Sun to the Vernal Equinox. this were a fixed point, the Sidereal and Tropical ars would be identical; but in consequence of the tion of the Sun and Moon upon the equatorial otuberance of the Earth's mass and, in a much less gree, the disturbing influence of the planets upon e Earth's orbit, the Equinox has a slow, retro-ade mean motion of 50".26 annually, so that e Sun returns to the Equinox sooner every ar than he otherwise would by 20 minutes 23.6 conds; the Tropical Year, therefore, consists of 365 days 5 hours 48 minutes and 46 seconds. The Tropical Year is not of uniform length: it is now slowly decreasing at the rate of .530 second per century, but this variation will not always continue.

Julius Caesar, in B. C. 45, reformed the Roman calendar so that thereafter every fourth year should contain 366 days, and all the other years 365 days. The intercalary day was introduced by counting the *sixth* day before the Kalends of March *twice*, hence the name bissextile, from bis, twice, and sex, six. He also changed the beginning of the year from the first of March to the first of January, and also changed the name of the fifth month (Quintilis) to July, after himself. The average length of the Julian year is therefore 365¼ days, which, however, is too long by 11 minutes and 14 seconds, and this would accumulate in 400 years to about three days. The Julian Calendar continued in use until A. D. 1582, when the Gregorian Calendar was introduced by Pope Gregory XIII. with the view of keeping the Equinox to the same day of the year. Of the centurial years only those which are exactly divisible by 400 thenceforward contained 366 days. The length of the mean Gregorian Year may therefore be set down at 365 days 5 hours 49 minutes 12 seconds, and the error will amount to one day in 3,000 years. The Gregorian Calendar was introduced into England and her colonies in 1752, at which time the Equinox had retrogreded 11 days since the Council of Nice in A. D. 325, when the rule for Easter Day was established and the Equinox occurred on March 21; hence September 3, 1752, was called September 14, and at the same time the commencement of the legal year was changed from March 25 to January 1, so that the year 1751 lost the months of January and February and the first 24 days of March. The difference between the Julian and Gregorian Calendars is now 13 days.

The Gregorian Calendar was adopted by Japan in 1873, by the Chinese Republic in 1912, by the Turkish Parliament in 1917, by the Bolshevist Government of Russia in 1918, and by Roumania in 1919. Bulgaria, Serbia, Greece and the Greek Church still use the Julian Calendar.

THE FRENCH REVOLUTIONARY ERA.

IN September, 1793, the convention decreed that the common era should be abolished in all civil affairs, d that the new French era should begin on September 22, 1792, the day of the true autumnal equinox, d that each succeeding year should begin at the midnight of the day on which the true autumnal equinox ls. The year was divided into twelve months of thirty days each. In ordinary years there were five tra days, from the 17th to the 21st of our September, and at the end of every fourth year was a sixth mpl mentary day. This reckoning was first used on November 22, 1793, and was continued until Decem-r 31, 1805, when it was discontinued, and the Gregorian Calendar was resumed.

STANDARD TIME.

THE United States adopted standard time in 1883, on the initiative of the American Railway Association, and at noon of November 18, 1883, the telegraphic time signals sent out daily from the Naval Observatory at Washington were changed to the new system, according to which the meridians of 90°, 105° and 120° west from Greenwich became the time meridians of Eastern, Central, Mountain, and Pacific standard time respectively.

By Act of Congress, approved March 19, 1918, standard time is made the legal time throughout the United States; in addition to the four time meridians already mentioned, the meridian 150° west from Greenwich is established the time meridian of standard Alaska time; authority to readjust the boundary line between the time zones is lodged with the Interstate Commerce Commission. The Commission has made the readjustment so as to bring the new limits of the zones about half way between the standard meridians.

United States standard Eastern time is used from the Atlantic Ocean to a line through Sandusky, Ohio; Mansfield, and between Columbus and Zanesville, Ohio; thence through Huntington, W. Va.; Norton, Va.; Johnson City, Tenn.; Asheville, N. C.; Atlanta and Macon, Ga., and Apalachicola, Fla. U. S. standard Central time is used from this first line to a line through Mandan, N. D.; Pierre, S. D.; McCook, Neb.; Dodge City, Kan., and along west line of Okla. and Tex.; standard Mountain time is used from this second line to a line that forms the western boundary of Montana, and thence passes through Pocatello, Idaho; Ogden and Salt Lake City, Utah; Parker and Yuma, Ariz. U. S. standard Pacific time is used from the third line to the Pacific Ocean.

Almost all countries throughout the world use standard time based on the meridians 15° apart from Greenwich, while some use standard time based on the longitude of their national observatories.

The astronomical day commences at noon of the civil day of the same date, and comprises 24 hours, noned from 0 to 24, from noon of one day to noon of the next. For example, Jan. 9, 2 A. M., civil time, Jan. 8, 14h, astronomical time.

HOW LIFE IS SPENT.

In an article discussing the time spent by a civilized human being in the various occupations of a day, London *Express* makes the following estimate of the account of an average man whose allotted span is ee score and ten years. His time has been divided up about as follows:

	Years.	Months.
eping	23	4
rk	19	8
reation and religious devotion.	10	2
ing and drinking	6	10
velling	6	..
Illness	4	..
Dressing	2	..
	—	..
Total	70	..

SHORT-FORM CALENDARS FOR 1920-1924.

(Prepared for THE ALMANAC by Jacob Backes, 302 Broadway, N. Y.)

The day of the week is found by locating the year heading, then the desired month under it, then the exact point at which the line of the m joins with the vertical column containing the day of the m

In changing old style to new, the addition of 13 days toward the end of any month will cause the style date to fall in the early part of the next month. In changing new style to old, the subtraction days toward the beginning of any month will cause the old-style date to fall in the latter part of the month.

ANTIQUITY OF CLOCKS.

THE first actual clock, according to Harry C. Brearley, was produced about 990 A. D. by Ger the monk, who was the most accomplished scholar of his age. The days of the monks, who at that were the only people to whom learning and science meant anything at all, were divided off by bells various periods, and the resounding of these bells was depended upon by all the people. And tha plains why the word "clock" was taken from the French word "cloche" and the Saxon word "clu both of which originally meant a bell. At any rate, at the close of the thirteenth century a clock wa up in St. Paul's Cathedral in London, and in 1581, Galileo an Italian youth of seventeen years, disco the principle of the pendulu n while watching a swinging lamp in the cathedral at Pisa.

Watches were born from the brain of Peter Henlein, a locksmith of Nuremburg, in about 1500. were called "Nuremburg eggs" because of their shape and were really stout. little portable clocks. spite of the fact that they had only one hand and no crystal and kept very uncertain time, they were a step forward. Just how uncertain time the early watches kept, Mr. Brearley humorously suggest quoting from "Dombey and Son," where the Captain drew Walter into a corner, and with a great e that made his face very red, pulled up the silver watch, which was so big and so tight in his pocket it came out like a bung." "'Wal'r,' said the Captain, handing it over and shaking him heartily by hand, 'a parting gift, my lad. Put it back half an hour every morning and another quarter toward a noon and it's a watch that'll do you credit.'"

MEASURING THE UNIVERSE.

(By the National Geographic Society.)

IMAGINE a circular field two and a half miles in diameter; place a library globe two feet in diameter in very centre; eighty-two feet away put a mustard seed. The globe will represent the sun and the mustard Mercury.

At a distance of 142 feet place a pea, and another at 215 feet. These will represent Venus and the ea both as to size and distance. A rather large pinhead at a distance of 327 feet will speak for Mars, and a sized tangerine a quarter of a mile distant will stand for Jupiter. A small le non at two-fifths of a mile play the role of Saturn, a large cherry three-fourths of a mile distant will answer for Uranus, and a fair-s plum at the very edge of the field will proclaim Neptune.

ed.

HOLIDAYS OF THE WORLD.

(For full list of fixed, historical, commemorative, and religious holidays, see 1919 Almanac.)

New Year's are observed the world over.

The day of the ... countries, such as England, the only church days which are regular legal holidays, a... ing the ye..., are Good Friday, Easter Monday, and Whit-Monday. This holds good for the Br... month u... some of which several Roman Catholic Church holidays are established.

...oman Catholic countries, such as Spain, the church days other than Christmas, which are al... ...ally legal holidays, are Epiphany, Ascension, Assumption, All Saints', and Immaculate Concep...

Feb ...ghout the Latin-American countries, it is usual to observe, in addition, Good Friday and Co...

Sep ...sti. Good Friday is in many of these countries a 3-day holiday season, beginning on Holy Thur... closing on Holy Saturday.

M... In Lutheran countries, such as Sweden, and Prussia, Epiphany, Annunciation, Good Friday, E... ...onday, Ascension Day, Whit-Monday, Ash Wednesday, and Corpus Christi are holidays.

OLD ENGLISH HOLIDAYS.

JANUARY 6. TWELFTH DAY, or Twelfth-tide, sometimes called Old Christmas Day, the same as Epiphany. The previous evening is Twelfth Night, with which many social rites have long been connected.

FEBRUARY 2. CANDLEMAS: Festival of the Purification of the Virgin. Consecration of the lighted candles to be used in the church during the year. Also known as "Groundhog Day."

FEBRUARY 14. OLD CANDLEMAS: St. Valentine's Day.

MARCH 25. LADY DAY: Annunciation of the Virgin. April 6 is old Lady Day.

JUNE 24. MIDSUMMER DAY: Feast of the Nativity of John the Baptist. July 7 is old Midsummer Day.

JULY 15. ST. SWITHIN'S DAY. There was an old superstition that if rain fell on this day it would continue forty days.

AUGUST 1. LAMMAS DAY. Originally in England the festival of the wheat harvest. In the Church the festival of St. Peter's miraculous deliverance from prison. Old Lammas Day is August 13.

SEPTEMBER 29. MICHAELMAS: Feast of St. Mic... the Archangel. Old Michaelmas is October 11.

NOVEMBER 1. ALL-HALLOWMAS: All-hallow... All Saints' Day. The previous evening is All-ha... e'en, observed by home gatherings and old ... festive rites.

NOVEMBER 2. ALL SOULS' DAY: Day of p... for the souls of the dead.

NOVEMBER 11. MARTINMAS: Feast of St. M... Old Martinmas is November 23.

DECEMBER 28. CHILDERMAS: Holy Innocents' ... Lady Day, Midsummer Day, Michaelmas ... Christmas are quarter (rent) days in England ... Whitsunday, Martinmas, Candlemas and La... Day in Scotland.

Shrove Tuesday, the day before Ash Wedne... and Maundy Thursday, the day before Good F... are observed by the Church. Mothering Sun... Mid-Lent Sunday, in which the old rural c... obtains of visiting one's parents and making ... presents.

Easter Sunday (Easter Day) is the first Sunday after the Paschal Full Moon, that is the first S after the full moon on or next after March 21, and therefore cannot be earlier than March 22, or late April 25. If the full moon falls on a Sunday, then Easter Day is the next Sunday.

Lent begins on Ash Wednesday, which comes 40 days previous to Easter Sunday, not counting Su

Directions:—For New York City, subtract 4m from the Calendar for that city and the result is in ern standard time; for other cities, use the Calendar named at head of column and add or subtract given number of minutes; this gives the required standard time, which is eastern, central, mountain or fic, according as the letter E, C, M or P is found in the table. A small letter indicates that in case nrise and sunset, a correction for latitude is advisable; which correction is to be found in the table below, ie column headed by the small letter and on line with the date.

CORRECTION TO SUNRISE.

THE MOON.

Of all the secondary planets the earth's satellite by far the most interesting and important. The on completes her circuit around the earth in a iod whose mean or average length is 27 days hours 43.2 minutes; but in consequence of her tion in common with the earth around the sun, mean duration of the lunar month, that is, the e from new moon to new moon, is 29 days 12 rs 44.05 minutes, which is called the moon's odical period. If the earth were motionless in ce the moon's orbit would be nearly an ellipse, ing the earth in one of the foci; hence her dis- ce from the earth varies during the course of a ar month. Her mean distance from the earth 38,862 miles. Her maximum distance, however, y reach 252,715 miles, and the least distance to ich she can approach the earth is 221,466 miles. r diameter is 2,160 miles, and if we deduct from distance from the earth the sum of the two radii of earth and moon, viz., 3,963 and 1,080 miles, re- ctively, we shall have for the nearest approach the surfaces of the two bodies 216,423 miles. r orbit is a very intricate one, because the earth moving around the sun carries the moon along h it; hence the latter is sometimes within and metimes without the earth's orbit. Its form is t of a serpentine curve, always *concave* toward sun, and its plane is inclined to the plane of the th's orbit at an angle of 5° 9′, in consequence of ich our satellite appears sometimes above and metimes below the plane of the earth's orbit, ough which she passes twice in a revolution. ese points of intersection with the ecliptic are led nodes, and it is only at or near them that pses can occur. The nodes have a retrograde tion, which causes them to make an entire revolu- n in 18 years 218 days 21 hours 22 minutes and 46 onds. Both sun and moon return to a node after years and 11 days, so that an eclipse is followed another of the same general character at the end his period, which was well known to the ancients, o called it the Saros, and which was made use of them in roughly predicting eclipses.

The moon always presents the same face to us, is evident from the permanency of the various rkings on her surface. This circumstance proves t she revolves on an axis, and the time of rota- n is exactly equal to the time of revolution around earth, viz., 27.32166 days. The moon's axis is not perpendicular to the plane of her orbit, but deviates therefrom by an angle of about 6° 41′. In consequence of this fact the poles of the moon lean alternately to and from the earth. When the north pole leans toward the earth we see somewhat more of the region surrounding it, and somewhat less when it leans the contrary way. This displacement is known by the name of libration in latitude. By reason of irregular motion in her orbit, we see more of her eastern or western edge at one time than at another. This phenomenon is known as libration in longitude.

The moon's surface contains about 14,657,000 square miles, or nearly four times the area of Europe. Her volume is 1-49 and her mass 1-81 that of the earth, and hence her density is about 3-5 that of the earth, or about 3 2-5 that of water. At the lunar surface gravity is only 1-6 of what it is at the earth, and therefore a body which weighs 6 pounds here would weigh only 1 pound there.

The centre of gravity of the earth and moon, or the point about which they both actually revolve in their course around the sun, lies *within* the earth; it is 1,050 miles below the surface.

The tides are caused mainly by the moon; the tide-raising power of moon and sun being as 11 to 5.

Astronomers cling to the old idea that the moon is a dead world destitute alike of air and water. But the recent observations of W. H. Pickering made at Mandeville, Jamaica, go to show that many changes occur with the alternation of lunar day and night: Great snow fields form in the mountain valleys and then melt away; fog banks are seen and, very rarely, drifting clouds. The loftiest peaks are snow-capped. The moon's surface is pitted with volcanic craters; some of these measure 100 miles across. Each crater is surrounded by a mountain ring 1,000 to 20,000 feet in height. According to Pickering, there are few, if any, such large and continuously active volcanic regions upon the surface of our earth. But the activity of the lunar volcanoes is now confined to the quiet emission of steam jets like those found in our Yellowstone National Park. Certain variable dark areas on the moon may be due to vegetation.

THE EARTH'S ATMOSPHERE.

The earth's sensible atmosphere extends more than 100 miles in height. The condition and motions of this aerial ocean play a most important part in the determination of climate, modifying, by absorbing, the otherwise intense heat of the sun, and, when laden with clouds, hindering the earth from radiating its acquired heat into space.

HALLEY'S COMET.

Of the great number of comets which have temarily visited our solar system or have become manent members of it none has surpassed Halley's historical associations. It has a record dating k to B. C. 240; its visitations spread alarm and sternation throughout Europe during the Middle Ages; it was the first whose return was predicted by an Astronomer Royal of England, and will therefore, for these reasons, be an object of great scientific interest for all time. Its periodic time is 76.8 years, and in April, 1910, it made the perihelion passage for the twenty-ninth time.

ENCKE'S COMET.

The second of the periodic comets to be discovered s Encke's, as Halley's was the first. Encke's net has the shortest period known, namely, ut forty months. The observed visitations, from uary, 1819, to June, 1921, form an uninterrupted es, thirty-two in number.

Encke's is unique among comets in that its motion is constantly accelerating and its period is decreasing in proportion, being now 1,203 days as compared with 1,205 days in 1819. At first this was ascribed to a resisting medium; but it is more probably due to repeated passage of the comet through a cloud of meteors.

COMETS OF 1843 AND 1882.

In the last 100 years only two comets have been brilliant enough to be seen by day with the unaided eye. these one was in February, 1843; the other, in September, 1882. Together with the comet of 1668 and t of 1887, they form a comet group; each member, at perihelion, nearly brushes the sun's surface, that of 3 having a velocity of 366 miles per second and passing halfway around the sun in two hours. These tors are expected to return after six or seven centuries. The four comets were probably a single body ll too close an encounter with the sun resulted in disruption.

DONATI'S COMET.

This was the finest comet of the Nineteenth Century and is known as the typical comet. In October, 8, its tail reached halfway from the horizon to the zenith. Its period is 2,000 years.

COMETS THAT HAVE MADE AT LEAST TWO PERIHELION PASSAGES.

Halley	1986	76.02	240 B. C.	0.59	35.32	162	57	112

The astronomical unit is used in columns 5 and 6; this is 92,900,000 miles.
* Biela's comet seems to have broken up into meteors.

MEASURING THE DIAMETER OF STARS.

So great is the distance of the stars that not even the most powerful of telescopes is able to show true star-disk and enable direct measurement to be made of the diameter. It has long been an axi among astronomers that the better the telescope the more nearly does the image of a star appear to b single point of light. The final success of astronomers in attacking this problem by indirect methods c stitutes a great triumph.

In 1889, Algol was found by spectroscopic measurement to revolve about an invisible companion a nearly circular orbit with a velocity of 26.5 miles per second. The orbit lies edgewise toward the ea and at intervals of 69 hours, that is to say in the course of each revolution, the invisible companion cor between the earth and Algol, shutting off the greater part of the latter's light. The variations in li were measured, and the diameter of Algol was thus found to be 1,160,000 miles, and that of the compani 840,000 miles.

Until 1920, these two were the only stars with known diameters. On December 13 of that year, w the 100-inch telescope at the Mount Wilson Observatory, the diameter of Betelguese was found to 0."045 in angular, and about 270,000,000 miles in linear measure; a few months later the diameter Arcturus was determined as 19,000,000 miles. The method used is due to Prof. Albert A. Michelson, Chicago University; the principle involved is that of the interference of light. Two small mirrors are us each directing a pencil of light from the star down the great tube of the telescope to the 100-inch mirr when the small mirrors are close together the usual diffraction fringes or alternating light and dark ba are seen accompanying the image of the star as viewed through the eye-piece of the telescope, but as small mirrors are separated the fringes grow fainter and finally disappear. The distance apart of mirrors is measured when the fringes are quite invisible; this distance, ten feet in the case of Betelgu depends upon the angular diameter of the star and the latter may be deduced from the former by a sim formula. If then the parallax of the star is known, the diameter in miles becomes known.

THE MYSTERY OF COMETS AND METEORS.

(From an essay by P. Puiseux, Astronomer at the University of Paris.)

In comparison with the planets and the stars the comets are doubtless ephemeral. What becor of the matter—tenuous, to be sure, but in time abundant—which is left in their wake? Fessenkoff consid that it must expand in the region of the ecliptic in the form of a vast flattened, lens-shaped mass cent about the sun and decreasing in density with increasing distance from the sun. All the well-known tr of the zodiacal light could thus be explained. Fessenkoff believes that certain unsymmetrical and chan able features which have been noted are due to insufficient allowance for the effects of atmospheric abso tion. The total mass of the zodiacal matter is certainly very small compared with that of the princi planets, indeed compared with that of the comets and meteors.

MAGNETIC DECLINATIONS.

VARIATION OF COMPASS FOR JANUARY, 1922—WITH THE ANNUAL CHANGE BETWEEN 1915 AND 1920 FOR SELECTED PLACES IN THE UNITED STATES.

A plus (+) sign to the annual change denotes that the declination is increasing, and a minus (—) sign reverse.

cially prepared for THE WORLD ALMANAC in the Office of the United States Coast and Geodetic Survey.)

Wind reduces the velocity of sound much more than fog or rain does. Explosions cannot be d guished separately when but 1-16 second apart. Sound in water travels 4,708 feet a second; in wo goes at least 10,000 feet a second; in metals, at least 4,000 feet a second.

ECLIPSES IN 1922.

In the year 1922 there will be two eclipses, both of the sun.

1. An annular eclipse of the sun, March 28, visible as annular in the valley of the Amazon River, in e Atlantic Ocean near the equator, in the Sahara, in northern Egypt and in Arabia. Visible as partial Central and South America, Europe and Africa; with the exception of the northernmost part of Europe d the southernmost parts of South America and Africa. The city of Maranhao, Brazil, will see the an- lar phase.

Greatest duration of annular phase will be 7.8 minutes.

2. A total eclipse of the sun, September 21, visible as total in Africa, in Somaliland; in the Indian ean, in the Maldive Islands and on Christmas Island; and in Australia along a path more than 2000 miles g and about 125 miles wide. Visible as partial in eastern Africa, southern Asia, the Malay Archipelago d Australia.

Greatest duration of total phase will be six minutes.

THE THEORY OF RELATIVITY.

In 1905 there appeared in the world of science a new theory, dealing with physics in general and with t and gravitation in particular. Albert Einstein is the author of the theory; although a German by th, Dr. Einstein is a naturalized citizen of Switzerland, where, in Zurich, he taught physics. During and ce the war he has been affiliated with the University of Berlin. He is now about forty-four years of age.

The new theory deals with fundamental ideas and is exceedingly difficult and complicated. It takes starting-point the so-called Michelson-Morley experiment which showed that some mysterious com- sating influence is at work to prevent an experimenter from detecting even with the most delicate in- uments the rate and direction of the earth's motion through the luminiferous ether. The ether is sup- ed by physicists to fill all space, to permeate all bodies freely and to be perfectly stationary; it would refore seem admirably qualified to serve as an absolute standard to which all questions of time and ce could be referred. The Michelson-Morley experiment left the modern physicist without any fixed certain datum ground. Dr. Einstein took up the matter at this point and denied that we can have knowledge of absolute motion as absolute position in space. One set of reference axes is as good as ther, provided the axes are not subject to twisting or to acceleration. All one can do is to compare ving bodies among themselves. So far Einstein differed not at all from Sir Isaac Newton, in whose ory the interplanetary ether had no place. But Einstein went further, startling the world with a phil- phy as new as it is far-reaching. The well-established doctrine of electrons enabled him to deal in a sterly way with bodies at exceedingly high velocities. He has generalized the whole science of physics of celestial mechanics. The three time-honored laws of motion propounded by Newton, as well as wton's law of gravitation, are true, according to Einstein, only for moderate velocities. For the greatest locities these laws require serious modification. The upper limit of all velocities is placed at 186,000 es per second; this, the velocity of light, is conceived to be a fundamental relation between space and time, hat no effect of any kind could possibly be propagated faster. At this speed all energy becomes latent, rtia becomes infinite, physiological processes are arrested and a condition of suspended animation en- s. If the earth should quit its orbit and go cruising through space with the velocity of light and should rn to the orbit and orbital motion only after the lapse of a thousand years, it would be true that to the th's inhabitants the thousand years had not been even a moment of time, since the clocks were at a ndstill and none of the sons of men had so much as made a movement; at the moment of return the ing of the clocks and the routine of life would automatically continue as if no millennial break had oc- red. The standards of length and force, as well as of time, undergo change with the body's motion; oving body is shortened in the direction of its progress and correspondingly lengthened in the trans- se direction; since everything is similarly distorted, it is impossible for the change to be perceived by who is himself partaking of the motion. The earth is thus shortened two and one-half inches. One ccordingly, further from the earth's centre at noon and midnight than at 6 A. M. and 6 P. M. The ticles of light are flattened in this way into circular disks of practically zero thickness.

It is Dr. Einstein who has brought the fourth dimension into physics as a vital fact. In addition to th, breadth and height of the old order, one now takes account of the time-dimension as the new fourth rdinate. Time and space are no longer treated as independent. The relativist claims that we can w nothing of absolute space in the Euclidean sense of a line that goes on and on straight into eternity infinity. The material universe moves in perfect cycles; the system of which we are a part moves ough a cycle of sixteen million light-years; at the end of that period it recommences its long journey , like the recurring decimal, repeats it over and over.

Energy is identical with mass; energy may be said to create this material world; and the doctrine of servation of energy becomes merged in the doctrine of conservation of mass. It is here that the rela- st seems most surely to have planted his feet on solid ground. He has the undoubted facts about elec- is in his support. Proceeding from the dictum that mass is identical with latent energy, he formulates w law that mass is not invariable, that mass actually receives an increment that varies with the square he ratio of the body's velocity to that of light. In astronomy this strange doctrine has already been sively confirmed. The most interesting and bewildering thing about relativity is that there is so much Nature to confirm it.

Some account is here given of the three great astronomical tests of the theory; of these the first two e been satisfactorily met: (1) The authors of accepted astronomical tables have been obliged to add arbitrary constant, 43″, to the centennial motion of Mercury's perihelion in order to secure agree- t between the old Newtonian theory and telescopic observation; this discrepancy was a hopeless puzzle l Einstein announced the law of mass varying with velocity and computed from this law a correction 2″, or within one second of the true. Mercury attains a velocity of thirty-five miles per second and is ar the most rapidly moving body in the solar system. (2) Einstein predicted that, if stars be observed n they are close to the sun's limb, the light coming from the stars to the earth would be bent by the vitational pull of the sun; stars at the limb would appear displaced outwardly from the sun by 1.75″; s some distance away from the limb would be displaced inversely as the distance from the centre of the s disk. Such observations can be made only at the time of a total solar eclipse. Einstein's success olving the problem of Mercury had greatly interested British astronomers. The prediction as to the ling of light was in the nature of a challenge, since it presented a clear-cut issue. The Newtonian law avitation led one to expect a displacement of 0.87″ at the sun's limb; Einstein predicted twice as much, 75″. Two expeditions went from England to observe the eclipse of May 29, 1919; one to Sobral, in l, the other to Principe, in the Gulf of Guinea. The one expedition secured 1.98″ as the result; the e, 1.61″; both are very strongly confirmatory of Einstein. (3) In an intense gravitational field like of the sun all lines of the spectrum should be displaced to the red. This displacement has not yet found.

ANTIDOTES FOR POISONS.

First. Send for a physician.

Second. Induce vomiting, by tickling throat with feather or finger. Drink hot water or strong ard and water. Swallow sweet oil or whites of eggs.

Acids are antidotes for alkalies, and vice versa.

From the photometric study of eclipsing binary stars it has been shown by Roberts and by Rus that the average densities of these stars is small, no more than one-eighth of that of the sun. On this other grounds astronomers are of the opinion that stars are generally less dense than the sun; that is, t they occupy a larger volume when of equal mass. The sun is only 1.4 times as dense as water, or hali dense as glass, while our earth is 5.5 times as dense as water, or 4 times as dense as the sun.

We may suppose that certain meteors are efficacious for troubling the surface of the sun because t are subject to closer approaches to it. Turner was led to adopt the idea, formerly held by J. Hersc while trying to represent the variable frequency of sun spots by a series of periodical terms. For a cou of years certain constant values may be adopted for the coefficients of these terms, and then these val have to be altered. The epochs of all these perturbations, according to Turner, fall close to the time of perihelion passage of the Leonides. It is true the distance of the Leonides from the sun, even at perihel passage, is somewhat great and necessitates recourse to a secondary stream derived through the intervent of some planet. This theory finds a certain degree of confirmation in the Chinese annals, which rec ancient increases in sun spots when the Leonides swarm must have passed close to Saturn.

From June 16 to August 1 both the upper and lower transits take place during daylight. The azimuth the time of greatest Eastern or Western elongation can be easily computed from the formula:

$$\sin A = \frac{\sin p}{\cos l}$$

ere A denotes the azimuth, p the polar distance, and l the latitude of the place.

TIME OF GREATEST ELONGATION.

In the United States, the greatest Eastern elongation of Polaris occurs 5h. 55m. before upper transit 6h. 3m. after lower transit; while the greatest Western elongation occurs 5h. 55m. after upper transit 6h. 3m. before lower transit.

The determination of stellar parallax is one of the most difficult and refined problems in practical or rvational astronomy. It is to find the angle which the semi-diameter of the earth's orbit subtends at star—an angle always very small, as seen from the above table, and which cannot be measured directly by various processes too complicated to be explained here.

HOW TO DETERMINE LATITUDES.

(A short method, by an observation at apparent noon.)

Set down 89 degrees, 48 minutes, and take the sun's observed altitude at noon from it. This gives the h distance. Mark the zenith distance north if the sun bears south, or south if the sun bears north. the sun's true declination under the zenith distance, and if they are both of one name their sum will e latitude; but if of different names, (i. e., one north and the other south), their difference is the latitude e same name of the greater number.

NOTE.—The sun's declination may be taken from the above table; in which the positive algebraic denotes north and the negative sign south. The sun's observed altitude corrected for semi diameter inutes additive, and dip and refraction, about 4 minutes subtractive equals 12 minutes difference subtracted from 90 degrees leaves 89 degrees 48 minutes, a constant number from which to subtract bserved altitude.

THE SUN'S SEMI-DIAMETER AND HORIZONTAL PARALLAX.

ASTRONOMICAL CONSTANTS.

MEAN solar parallax, 8″.80. Nutation constant, 9″.21.
Aberration constant, 20″.47. Annual precession, 50″.2564+0″.000222 (t—1900).
Obliquity of the ecliptic, 23° 27′ 8″.26—0″.4684 (t—1900).
Annual diminution of obliquity, 0″.4684.
Moon's equatorial horizontal parallax, 57′ 2″.63.
Moon's mean distance from the earth (centre to centre), 238,862 miles.
Sun's mean distance from the earth (astronomical unit), 92,897,400 miles.
Velocity of light, 186,324 miles per second.
Light travels unit of distance—viz. 92,897,400 miles in 498.580 seconds.
Length of the Year—Tropical (equinox to equinox), 365.2421988 days.
Sidereal or absolute revolution, 365.2563604 days.
Anomalistic (from perihelion to perihelion), 365.2596413 days.
Length of Day—Sidereal, 23 hours 56 minutes 4.091 seconds (mean solar time). Mean solar, 24 hours nutes 56.555 seconds (sidereal time).
Length of the Month—Synodical (from new moon to new moon), 29 days 12 hours 44 minutes 2.8 nds. Tropical, 27 days 7 hours 43 minutes 4.7 seconds. Sidereal (absolute revolution), 27 days 7 hours inutes 11.5 seconds. Anomalistic (from perigee to perigee), 27 days 13 hours 18 minutes 33.1 seconds.
Dimensions of the Earth—Equatorial radius, 3963.34 miles. Polar radius, 3949.99 miles. Eccen- y of the oblate spheroid, 0.0819981.

THE ZODIAC.

The sun's apparent yearly path among the stars is known as the ecliptic. The zone 16° wide, 8° on side of the ecliptic, is known as the zodiac. Beginning at the point on the ecliptic which marks the ion of the sun at the vernal equinox, and thence proceeding eastward, the zodiac is divided into twelve of 30° each, which are as follows:

SIGNS OF THE ZODIAC.

ring	1. ♈ Aries. The Ram.		7. ♎ Libra. The Balance.
gns.	2. ♉ Taurus. The Bull.	Autumn	8. ♏ Scorpius. The Scorpion.
	3. ♊ Gemini. The Twins.	Signs.	9. ♐ Sagittarius. The Archer.
mer	4. ♋ Cancer. The Crab.		10. ♑ Capricornus. The Goat.
gns.	5. ♌ Leo. The Lion.	Winter	11. ♒ Aquarius. The Water-Bearer.
	6. ♍ Virgo. The Virgin.	Signs.	12. ♓ Pisces. The Fishes.

These signs are named from the twelve constellations of the zodiac; with which the signs coincided in me of the astronomer Hipparchus, about two thousand years ago. Owing to the precession of the equi- s, that is to say, to the retrograde motion of the equinoxes along the ecliptic, each sign in the zodiac has, e course of two thousand years, moved backward 30° into the constellation west of it; so that the sign is now in the constellation Pisces, and so on.

The zodiac, with its constellations and with the symbols that represent them, is of the greatest antiquity; is traceable in part, at least, to an Egyptian origin. The zodiac may be called the great highway of the ens, its width being such as to include all the journeyings of the sun, moon, and seven major planets.

LATITUDE AND LONGITUDE TABLE.

Latitude of a place is its angular distance from the equator and is measured by an arc of the meridian between the zenith and the equator. Longitude of a place is measured by the arc of the equator, intercepted between the prime meridian and the meridian passing through the place, or by the angle at the pole between those two meridians.

THE MAGNETIC POLES.

THE geographical poles of the earth are the extremities of the imaginary line passing through its centre of gravity and about which it revolves, and are therefore symmetrically located with regard to the equator. The magnetic poles, however, are not coincident with the geographical poles, nor are they diametrically opposite to each other. Prior to the recent attempt of Amundsen to determine the north magnetic pole, the only other was by Capt. James Ross in June, 1831, who found the dip of the magnetic needle to be 89° 59′ .5, in latitude 70° 5′ .2 N. and longitude 96° 45′ .8 W., which is in King William Land, Canada. The result of Amundsen's observations has not yet been published by the Norwegian authorities.

For the south magnetic pole, from a consideration of all the results available, according to the United States Coast and Geodetic Survey, the position latitude 72° .7 S. and longitude 156° E. has been tentatively adopted. These values are only roughly approximate, and for that reason are given only in degrees and tenths.

By reason of the annual variation of the magnetic needle, it is believed that the magnetic poles are not stationary, but have a slow motion around the geographical poles. The subject is shrouded in mystery and constitutes one of the many as yet unsolved problems in terrestrial physics.

ASTRONOMICAL SIGNS AND SYMBOLS.

☉	The Sun.	♂	Mars.	☌	Conjunction.
☾	The Moon.	♃	Jupiter.	□	Quadrature.
☿	Mercury.	♄	Saturn.	☍	Opposition.
♀	Venus.	♅	Uranus.	☊	Ascending Node.
⊕	The Earth.	♆	Neptune.	☋	Descending Node.

Two heavenly bodies are in "conjunction" (☌) when they have the same *Right Ascension*, or are on the *same meridian, i. e.*, when one is due *north* or *south* of the other; if the bodies are near each other as seen from the earth, they will rise and set at the same time; they are in "opposition" (☍) when in opposite quarters of the heavens, or when one rises just as the other is setting. "Quadrature" (□) is half way between conjunction and opposition. By "greatest elongation" is meant the greatest apparent *angular* distance from the sun; the planet is then generally most favorably situated for observation. Mercury can be seen with the naked eye only at this time. When a planet is in its "ascending" (☊) or "descending" (☋) node it is passing through the plane of the earth's orbit. The term "Perihelion" means nearest to the sun, and "Aphelion" farthest from the sun. An "occultation" of a planet or star is an eclipse of it by some other body, usually the moon.

CLASSIFICATION OF ROCKS AND DIVISIONS OF GEOLOGIC TIME.

(Prepared by the U. S. Geological Survey.)

THE rocks composing the earth's crust are grouped by geologists into three great classes, igneous, sedimentary, and metamorphic. The igneous rocks have solidified from a molten state. Those that have solidified beneath the surface are known as intrusive rocks. Those that have flowed out over the surface are known as effusive rocks, extrusive rocks, or lavas. The term volcanic rock includes not only lavas but bombs, pumice, tuff, volcanic ash and other fragmental materials thrown out from volcanoes. Sedimentary rocks are formed by the accumulation of sediment in water (aqueous deposits or eolian deposits). The sediment may consist of rock fragments or particles of various sizes (conglomerate sandstone, shale); of the remains or products of animals or plants (certain limestones and coal); of the product of chemical action or of evaporation (salt, gypsum, etc.); or of mixtures of these materials. A characteristic feature of sedimentary deposits is a layered structure known as bedding or stratification. Metamorphic rocks are derivatives of igneous or sedimentary rocks produced through mechanical or chemical activities in the earth's crust. The unaltered sedimentary rocks are commonly stratified, and it is from their order of succession and that of their contained fossils that the fundamental data of historical geology have been deduced.

ERA.	Period.	Epoch.	Characteristic Life.
Cenozoic. (Recent Life.)	Quaternary.	Recent Pleistocene. (Great Ice Age.)	"Age of man." Animals and plants of modern types.
	Tertiary	Pliocene. Miocene. Oligocene. Eocene.	"Age of mammals." Possible first appearance of man. Rise and development of highest orders of plants.
Mesozoic. (Intermediate Life.)	Cretaceous.	Upper. Lower.	"Age of reptiles." Rise and culmination of huge land reptiles (dinosaurs). First appearance of birds and mammals; and palms and hardwood trees.
	Jurassic.		
	Triassic.		
Paleozoic. (Old Life.)	Carboniferous.	Permian. Pennsylvanian. Mississippian.	"Age of amphibians." Dominance of tree ferns and huge mosses. Primitive flowering plants and earliest cone-bearing trees. Beginnings of backboned land animals. Insects.
	Devonian.		"Age of fishes." Shellfish (mollusks) also abundant. Rise of amphibians and land plants.
	Silurian.		Shell-forming sea animals dominant. Rise of fishes and of reef-building corals.
	Ordovician.		Shell-forming sea animals. Culmination of the buglike marine crustaceans known as trilobites. First trace of insect life.
	Cambrian.		Trilobites, brachiopods and other sea shells. Seaweeds (algae) abundant. No trace of land animals.
Proterozoic. (Primordial Life.)	Algonkian.		First life that has left distinct record. Crustaceans, brachiopods and seaweeds.
	Archean.	Crystalline Rocks.	No fossils found.

THE first striking fact in the geological history of climate is that the present climate of the world has been maintained since the date of the earliest, unaltered, sedimentary deposits. The oldest sandstones of the Scotch Highlands and the English Longmynds show that in pre-Cambrian times the winds had the same strength, the raindrops were of the same size, and they fell with the same force as at the present day. The evidence of paleontology proves that the climatic zones of the earth have been concentric with the poles as far back as its records go; the salts deposited by the evaporation of early Paleozoic lagoons show that the oldest seas contained the same materials in solution as the modern oceans; and glaciations have recurred in Arctic and, under special geographical conditions, also in temperate regions at various periods throughout geological time. The mean climate of the world has been fairly constant, though there have been local variations which have led to the development of glaciers in regions now ice free, at various points in the geological scale. That there has been no progressive chilling of the earth since the date of the oldest known sedimentary rocks is shown by their lithological characters and by the recurrence of glacial deposits, some of which were laid down at low levels at intervals throughout geological time.

EARTHQUAKE AREAS OF THE EARTH.

From Major de Montessus de Balore's catalogue of 130,000 shocks. The observation covers fifty years.

AREA.	Earthquakes.	AREA.	Earthquakes.	AREA.	Earthquakes.
Scandinavia	646	Greece	10,306	United States, Atlantic Coast	937
British Isles	1,139	Russia	258	Mexico	5,586
France	2,793	Asia Minor	4,451	Central America	2,739
Spain and Portugal	2,656	India	813	West Indies	2,561
Switzerland	3,395	Japan	27,562	South America	8,081
Italy	27,672	Africa	179	Java	2,155
Holland and North Germany	2,326	Atlantic Islands	1,704	Australia and Tasmania	83
Sicily	4,331	United States, Pacific Coast	4,467	New Zealand	1,925

The most shaken countries of the world are Italy, Japan, Greece, South America (the Pacific Coast), Java, Sicily, and Asia Minor. The lands most free from these convulsions are Africa, Australia, Russia, Siberia, Scandinavia, and Canada. As a rule, where earthquakes are most frequent they are most severe. But to this general statement there are exceptions—Indian shocks, though less numerous, being often very disastrous. Loss of life in many cases depends, however, on density of population rather than on the intensity of the earth movement.

HIGH-TIDE TABLES.

FOR GOVERNOR'S ISLAND (NEW YORK HARBOR).

(Specially prepared from the Tide Tables of the United States Coast and Geodetic Survey for THE WORLD ALMANAC.)

Eastern Standard Time.

1922.	January.		February.		March.		April.		May.		June.

NOTE—The time as above given from April to October, inclusive, must be increased by one hour in order to obtain Daylight Saving Time.

HIGH-TIDE TABLES—*Continued.*

TIME OF HIGH WATER AT POINTS ON THE ATLANTIC COAST.

The standard time of high water at the following places may be found approximately for each day by adding to or subtracting from the time of high water at Governor's Island, N. Y., the hours and minutes annexed.

		H.	M.
Albany, N. Y.	add	9	54
Annapolis, Md.	add	9	13
Atlantic City, N. J.	sub.		51
Baltimore, Md.	add	11	5
Bar Harbor, Me.	add	2	31
Beaufort, S. C.	add		33
Block Island, R. I.	sub.		41
Boston, Mass.	add	3	12
Bridgeport, Ct.	add	3	2
Bristol, R. I.	sub.		13
Cape May, N. J.	sub.		10
Charleston, S. C.	sub.		15
Eastport, Me.	add	2	37
Fernandina, Fla.	add		26
Gloucester, Mass.	add	2	57
Hell Gate Ferry, East River, N. Y.	add	2	6
Isle of Shoals, N. H.	add	3	1
Jacksonville, Fla.	add	1	30
Key West, Fla.	add	2	19
League Island, Pa.	add	5	26
Marblehead, Mass.	add	3	0
Nahant, Mass.	add	2	59
Nantucket, Mass.	add	4	4
Newark, N. J.	add		58
New Bedford, Mass.	sub.		19
Newburyport, Mass.	add	3	23
New Haven, Ct.	add	3	0
New London, Ct.	add	1	14
Newport, R. I.	sub.		31
Norfolk, Va.	add	1	21
Norwich, Ct.	add	1	55
Old Point Comfort, Va.	add		49
Philadelphia, Pa.	add	5	56
Plymouth, Mass.	add	3	4
Point Lookout, Md.	add	5	5
Portland, Me.	add	2	52
Portsmouth, N. H.	add	3	13
Poughkeepsie, N. Y.	add	4	36
Providence, R. I.	sub.		2
Richmond, Va.	add	8	53
Rockaway Inlet, N. Y.	sub.		22
Rockland, Me.	add	2	44
Rockport, Mass.	add	2	55
Salem, Mass.	add	3	0
Sandy Hook, N. J.	sub.		29
Savannah, Ga.	add		50
Southport (Smithville), N. C.	sub.		18
Vineyard Haven, Mass.	add	3	25
Washington, D. C.			0
Watch Hill, R. I.	add		36
West Point, N. Y.	add	3	2
Wilmington, N. C.	add	1	56

EXAMPLE.—To find the approximate standard time of high tide at Atlantic City, N. J., on any day, find first the time of high water at New York under the desired date, and then subtract 51 minutes, as in the above table; the result is the time of high water required.

AVERAGE RISE AND FALL OF TIDE.

PLACES.	Feet.	Inch.
Baltimore, Md.	1	2
Boston, Mass.	9	7

Seattle, Wash.	11	4
Tampa, Fla.	2	2
Washington, D. C.	2	11

Highest tide at Eastport, Me., 218 inches. Lowest tide at Galveston, Tex., 12 inches.

THE MEANING OF "1 INCH OF RAIN."

ON every daily weather bulletin or chart the amount of rainfall at various places during the preceding 24 hours is printed in inches and hundredths of inches. In a general way the public understands that a rainfall of 2 inches in one day is heavy, and that one of a tenth of an inch is light, but no attempt is made to associate the linear measurement of the water with its equivalents in weight or bulk. This is necessary for a proper understanding of the actual quantitative value of the rain, and the few figures following may prove of assistance in making calculations.

An acre of ground contains 43,560 square feet. Consequently, a rainfall of 1 inch over 1 acre of ground would mean a total of $43,560 \times 144$, or 6,272,640 cubic inches of water. This is equivalent to 3,630 cubic feet. As a cubic foot of pure water weighs about 62.4 pounds, the exact amount varying slightly with the density, it follows that the weight of a uniform coating of 1 inch of rain over 1 acre of surface would be $3,630 \times 62.4 = 226,512$ pounds, or 113¼ short tons.

The weight of 1 United States gallon of pure water is 8 345 pounds. Consequently a rainfall of 1 inch over 1 acre of ground would mean $226,512 \div 8.345 = 27,143$ gallons of water on the acre. This is equivalent to 603 barrels of 45 gallons each, and would be sufficient to fill a tank or pool about 20 feet square and 9 feet in depth. Should a farmer desire to build a cistern to be supplied by rainwater from a roof, he can, if he knows the annual rainfall of his locality, so construct his cistern as to make the best possible use of the rainfall. For instance, a rainfall of 1 inch on a roof of 3,000 square feet capacity would mean a total volume of 432,000 cubic inches, or 250 cubic feet, available for the cistern (loss from splashing, etc., not considered). This is equal to 1,870 United States gallons, or about 41.5 barrels of 45 gallons each, enough to fill a cistern 8 feet in diameter to a depth of 4.97 feet.

THE EARLIEST CALENDARS.

ONE of the earliest almanacs was the clog almanac, in use both in England and Denmark. This was a square stick or box eight inches long and made either to be hung in the parlor or to be used as a cane.

Each corner and side represented three months. The holidays were marked with symbols of the saint or occasion which they were designated to celebrate. Christmas was indicated with a horn, and Nov. 23 was pictured as a pot of ale because that day was St. Clement's Day, on which custom decreed that the poor should go about begging for ale to make merry with. The first written calendars were made by the Greeks of Alexandria in 150 A. D. Perhaps the oldest almanacs known are those of Solomon Jarchus, published in 1150. A manuscript copy of the almanac of Petrus de Dacia, published in 1300, is preserved at Oxford. Almanacs became prevalent during the Fifteenth Century. The first almanac to be printed in Europe was the Kalendarium Novum, the author being Regiomontanus. The almanac was issued three years, 1475, 1494 and 1513; was sold for 10 crowns gold, and circulated throughout Hungary, Germany, Italy, France and England. England's first calendar was the Shepheard's Kalendar, which, translated from the French, was printed in 1497. Each month started with an appropriate poem.

WEATHER FLAGS

OF THE WEATHER BUREAU, U. S. DEPARTMENT OF AGRICULTURE.

THE Weather Bureau furnishes, when practicable, for the benefit of all interests dependent upon weather conditions, the "Forecasts" which are prepared daily at the Central Office in Washington, D. C., and certain designated stations. These forecasts are telegraphed to stations of the Weather Bureau, railway officials, postmasters, and many others, to be communicated to the public by telegraph, telephone, "wireless" and mail or by means of flags or steam whistles. The flags adopted for this purpose are five in number, and of the forms and colors indicated below:

EXPLANATION OF WEATHER FLAGS.

No. 1. White Flag.	No. 2. Blue Flag.	No. 3. White and Blue Flag.	No. 4. Black Triangular Flag.	No. 5. White Flag with black square in Centre.
Fair weather.	Rain or snow.	Local rain or snow.	Temperature.	Cold wave.

When number 4 is placed above number 1, 2 or 3, it indicates warmer; when below, colder; when not displayed, the temperature is expected to remain about stationary.

WHISTLE SIGNALS.

A warning blast of from fifteen to twenty seconds' duration is sounded to attract attention. After this warning the longer blasts (of from four to six seconds' duration) refer to weather, and shorter blasts (of from one to three seconds' duration) refer to temperature; those for weather are sounded first.

Blasts.	Indicate.	Blasts.	Indicate.
One long	Fair weather.	One short	Lower temperature.
Two long	Rain or snow.	Two short	Higher temperature.
Three long	Local rain or snow.	Three short	Cold wave.

By repeating each combination a few times, with intervals of ten seconds, liability to error in reading the signals may be avoided.

As far as practicable, the forecast messages are telegraphed at the expense of the Weather Bureau; but if this is impracticable they are furnished at the regular commercial rates and sent "collect." In no case are the forecasts sent to a second address in any place, except at the expense of the applicant.

SMALL CRAFT, STORM AND HURRICANE WARNINGS

OF THE WEATHER BUREAU, U. S. DEPARTMENT OF AGRICULTURE.
AS DISPLAYED ON THE ATLANTIC, PACIFIC, AND GULF COASTS.

All square flags shown here are red with black centre when displayed as warnings.

Small Craft Warning—A red pennant indicates that moderately strong winds that will interfere with the safe operation of small craft are expected. No night display of small craft warnings is made.

Northeast Storm Warning—A red pennant *above* a square red flag with black centre displayed by day, or two red lanterns, one above the other, displayed by night, indicates the approach of a storm of marked violence with winds beginning from the *northeast*.

Southeast Storm Warning—A red pennant *below* a square red flag with black centre displayed by day, or one red lantern displayed by night, indicates the approach of a storm of marked violence with winds beginning from the *southeast*.

Southwest Storm Warning—A white pennant *below* a square red flag with black centre displayed by day, or a white lantern *below* a red lantern displayed by night, indicates the approach of a storm of marked violence with winds beginning from the *southwest*.

Northwest Storm Warning—A white pennant *above* a square red flag with black centre displayed by day, or a white lantern *above* a red lantern displayed by night, indicates the approach of a storm of marked violence with winds beginning from the *northwest*.

Hurricane, or Whole Gale Warning—Two square flags, red with black centres, one above the other, displayed by day, or two red lanterns, with a white lantern between, displayed by night, indicate the approach of a tropical hurricane, or of one of the extremely severe and dangerous storms which occasionally move across the Great Lakes and Atlantic coast.

VELOCITY OF WINDS IN THE UNITED STATES.

AVERAGE hourly velocity of the wind at selected stations of the United States Weather Bureau, also the highest velocity ever reported for a period of five minutes. (Prepared by Chief of the U. S. Weather Bureau, and revised to January 1, 1921, for THE WORLD ALMANAC.)

Light breeze	10	880	14.67	.400	Whole gale	60	5,280	88.0	14.400
Gentle breeze	15	1,320	22.0	.900	Storm	70	6,160	102.7	19.600
	20	1,760	29.3	1.600	Hurricane	80	7,040	117.3	25.600
Moderate breeze	25	2,200	36.6	2.500		100	8,800	146.6	40.000

The winds of highest velocity have been found about six or seven miles above the sea at the level of the highest clouds. Both above and below this level the speeds fall off. The rates of motion have been checked very carefully by observing the drift of special rubber balloons. The observations are made through telescopic instruments from the ground. Similarly, the drift of clouds has been observed and measured.

MARCH THE WETTEST, SEPTEMBER THE DRYEST, MONTH.

(Number of times that each month has stood in each order of dryness, for 38 years, 1868 to 1905, inclusive. Computed from natural flow of Croton River, N. Y., at New Croton Dam.)

RULES FOR FORETELLING THE WEATHER.

ADAPTED FOR USE WITH ANEROID BAROMETERS.

A RISING BAROMETER.

A RAPID rise indicates unsettled weather.

A gradual rise indicates settled weather.

A rise with dry air and cold increasing in Summer indicates wind from the northward; and if rain has fallen, better weather may be expected.

A rise with moist air and a low temperature indicates wind and rain from the northward.

A rise with southerly winds indicates fine weather.

A STEADY BAROMETER

with dry air and seasonable temperature indicates a continuance of very fine weather.

A FALLING BAROMETER.

A rapid fall indicates stormy weather.

A rapid fall with westerly wind indicates stormy weather from the northward.

A fall with a northerly wind indicates storm, with rain and hail in Summer, and snow in Winter.

A fall with increased moisture in the air, and heat increasing, indicates wind and rain from the southward.

A fall with dry air and cold increasing in Winter indicates snow.

A fall after very calm and warm weather indicates rain with squally weather.

The barometer rises for northerly winds, including from northwest by north to the eastward for dry, or less wet weather, for less wind, or for more than one of these changes, except on a few occasions, when rain, hail or snow comes from the northward with strong wind.

The barometer falls for southerly wind, including from southeast by south to the westward, for wet weather, for stronger wind or for more than one of these changes, except on a few occasions, when moderate wind, with rain or snow, comes from the northward.

DURATION OF DIFFERENT KINDS OF WEATHER IN THE SEVERAL STORMS—VICINITY OF NEW YORK.

Critical Winds.	Clear Hours.	Cloudy Hours.	Rain Hours.	Clearing Hours.
South to Southwest	9	8	8.3	14
South to Southeast	14	13.4	15.6	15.4
East to Northeast	20	17.6	31	20.6

WEATHER WISDOM.

A gray, lowering sunset, or one where the sky is green or yellowish-green, indicates rain. A red sunrise, with clouds lowering later in the morning, also indicates rain. A halo occurring after fine weather indicates a storm. A corona growing smaller indicates rain; growing larger, fair weather. A morning rainbow is regarded as a sign of rain; an evening rainbow of fair weather. A deep-blue color of the sky, even when seen through clouds, indicates fair weather; a growing whiteness, an approaching storm. Fogs indicate settled weather. A morning fog usually breaks away before noon. Unusual clearness of the atmosphere, unusual brightness or twinkling of the stars, indicate rain. The first frost and last frost are usually preceded by a temperature very much above the mean.

MONTHLY AND ANNUAL MEAN TEMPERATURE AND PRECIPITATION.

(Mean averages, covering a period of years.)

VARIATIONS IN RAINFALL.

Cultivation of semi-arid lands does not cause any appreciable difference in the rainfall in that region, according to records of the Weather Bureau of the Department of Agriculture. Special attention has been given by the bureau to this subject and in arriving at this conclusion the specialists delved into the weather records for the last fifty years. During that period there has been a decided increase in the area under cultivation in the Great Plain States. If increasing the area of cultivation in any district increased the precipitation, the specialists point out, a steady rise in the annual rainfall of this region could be expected. Instead of a regular increase, the records show there are well-defined but comparatively short periods of increasing and decreasing rainfall, but which cannot be due to cultivation.

The records of the average rainfall over the Western Great Plains show that for twenty-five years from 1868 to 1892, inclusive, it was 19.2 inches, and from 1893 to 1917, inclusive, 18.4 inches. Over the Southern Great Plains the average rainfall for the twenty-five years from 1868 to 1892, inclusive, was 19.8 inches, and for the next twenty-five years only 17.8 inches.

SNOWFLAKES.

(By Samuel K. Pearson jr., 315 York St., Jersey City, Co-operative Observer, U. S. Weather Bureau, in New York Evening Post.)

How many of us really know and realize when we observe myriads of snowflakes softly sifting down what wonderful crystals they are composed of? What causes them to form in so many different and perfect forms? What elements in nature's laboratory produce them in general and of what benefit are they to mankind and nature?

These curious crystals are trodden under foot in the cities unknown and unheeded, and their beauty perishes without ever having pleased our eyes. The next snowy day when the flakes powder your hat and coat, just stop a minute and examine the flakes on your coat, which furnishes a dark background and shows them off to good advantage. If you will do this you will find that they are all beautiful, all different, and all wonderfully constructed.

First we must understand what produces snow. When vapor is condensed with the temperature below freezing the precipitation will fall as snow, first being formed into minute crystals and later into flakes by the consolidation of these crystals. They preserve their beautiful forms if the air temperature throughout their fall to the earth is at or below the freezing point, but if the lower air is above freezing the flakes will naturally pass to the ground in a watery form. Snow may fall with the temperature at the earth as high as 40, and rain may occur with the mercury at 20, while freezing point is 32.

Over forty years ago the only method of the reproduction of snow crystals was by drawings, and extended examinations of them were extremely difficult, due to the very uncomfortable atmosphere necessary for the observer to work in. If the temperature was above the freezing point the delicate structures speedily would dissolve, and their outlines could be preserved for study and comparison only by the art of expertness in drawing. Drawings had to be hastily accomplished, and would show little of the internal structure, which is a very important feature of the majority of snow crystals.

FLAKES UNDER THE LENS.

However, during the past forty years much has been accomplished in photography, and by the usual combinations of microscope and camera snow can be easily and quickly photographed. Far more satisfactory reproductions can be obtained by this method of so-called photomicrographic work than was possible formerly by drawings.

Those fortunate enough to possess the necessary instruments for photomicrographic work and who have not taken up the study of snow crystals do not realize what an important, wonderful, beautiful and interesting study they have neglected. A close and minute study of the majority of them will reveal symmetry, beauty and complexity of structure not observed by the casual observer with his naked eye. The opportunities afforded for this study in this vicinity are not very encouraging on account of snow not occurring frequently during the average winter, but the cold season seldom passes without at least a few snowstorms of both local and general character, which may enable the observer to study and photograph a moderate number of different specimens.

The methods employed in photographing the crystals are quite simple, although the utmost haste must be exercised, as evaporation or melting quickly diminishes them, or may even cause them to lose their identity entirely as a crystal. Intense cold will cause rapid evaporation of the flake and produce discomfort to the photographer, while a mild temperature will melt it.

A black card is used for the purpose of collecting snowflakes as they are deposited, and they may be picked up and transferred by the careful use of a broom splint to a glass slide for observation under the microscope, being extremely careful to keep one's warm breath a safe distance from the crystal. It is then pressed down flat upon the glass slide by the use of a feather and the slide then placed on the stage of the microscope, and after being properly focused an exposure varying from a few seconds to several minutes, depending on the illumination, is made.

Stars are the most common forms of crystals and it takes comparatively mild temperature to produce them. Solid crystals, usually taking the form of thin plates of ice, are formed in low temperatures, and when examined under the glass reveal almost as much beauty as the stars. Those having the form of little pyramids of ice and needles often fall during extremely cold weather.

What is more remarkable about snow crystals is that they are all, with very few exceptions, hexagonal in form. Nobody can explain why, but for some reason, vapor, when congealed into snow crystals builds them on a six sided plan. The star forms always have six rays and the needles, pyramids, and ice plates all have six sides. If the regular formation of the crystal has not been interfered with in any way by wind or other disturbances during its passage to the earth, the six parts will be found exactly alike. If one ray of a star branches out into a feathery form or point the remaining five rays will have exactly the same formation, that is, the spicules attached to each ray will number the same and will be arranged in precisely the same way. If the crystal be in the form of a hexagon, or six sided plate, and one side is decorated in any particular way, the other five will have decorations exactly alike.

The great problem to the scientist is, how do the atoms of snow crystals know their proper positions in this remarkable symmetry of sixes? It may never be known, but is so marvellous that it is worthy of a great deal of thought on our part. Scientists have produced their theories and tried to explain, but their efforts have not resulted in any acceptable explanation by them, and they can only inform us of the fact that in this wonderful process of crystallization the atoms are very fond of order except on compulsion. Atoms of all substances, if permitted to pass from a liquid to a solid state under proper conditions, will always arrange themselves into certain definite figures; that is, each different substance has its own plan of crystallization. Salt allowed to crystallize forms cubes; gold produces crystals composed of little triangles, and glass under certain conditions will form into stars similar to those produced by the freezing of water. But the most beautiful of all crystals are those made by the freezing of water into ice, sleet and hail, and the freezing of vapor into snow. In ice the crystals cannot be seen with the naked eye because they are frozen so close together.

VARIATION OF CRYSTALS.

Upon examination of only a small part of Mr. Bentley's large collection of world-famous specimens one would say that there were designs enough for all the jewellers and lacemakers in the world. His photographs surpass the sum total of all that has been accomplished by all other scientists, and form the basis of all future research into the reasons for the unlimited variety of forms that are deposited.

Many of his photographs and descriptions have been published by the Weather Bureau, to which they have proved very valuable, as well as to those interested in the study. Since 1884 photographs have been secured every winter and every great snowstorm has supplied from four to thirty-four new crystals. While taking the specimens, observations of temperature, clouds, direction and velocity of winds and clouds, and changes in the forms of the crystals from hour to hour as the different portions of each storm passed over his locality were taken, and the data thus secured proved valuable and interesting to account for the different forms and varieties of the flakes. Undoubtedly each flake contains in its structure traces of the processes that it has undergone in its passage from the clouds to the earth's surface.

The most perfect crystals are found in large quantities in storms of great intensity, while local storms produce mostly granular or irregular forms, except when the temperature is extremely low, when they may resemble more or less those of a blizzard.

LIGHTHOUSES ON THE AMERICAN COAST.

(By the Lighthouse Service, Department of Commerce.)

Illuminating apparatus consists of a source of light placed in an optical apparatus. Usually, for the purpose of concentrating the light and directing it toward the horizon or in horizontal beams to sweep the horizon, there is an arrangement of lenses, prisms and reflectors in various combinations. The lenses act as refractors of the light, and the prisms may act as refractors or reflectors, or both. The system of reflectors is named catoptric; of refractors, dioptric; and the combination of the two, catadioptric. To vary the characteristics of lights, there are flashing and occulting mechanisms by which lens panels or screens are revolved, or the light is periodically obscured by shutters, or, in the case of gas or electric lights, the supply of gas or current is cut off. Lights are also distinguished by the number of lights or by showing either a fixed color over a definite area or a colored flash, this being effected by the use of colored glass. The source of light for the greater number of lights is a special form of kerosene-oil wick lamp, but in recent years other more powerful lamps and illuminants have been introduced. The oil-vapor lamp, burning vaporized kerosene oil under an incandescent mantle, gives a much more powerful light. Acetylene, and oil-gas are used for lighted buoys, unattended lighted beacons, &c. Electric arc lights and electric incandescent lights are also used.

A flash is always shorter than the duration of an eclipse. An occultation is shorter than, or equal to, the duration of light. Lights are characterized as flashing or occulting solely according to the relative durations of light and darkness, and without reference to the type of illuminating apparatus employed or relative brilliancy. In approaching a light of varying intensity, such as fixed varied by flashes, or alternating white and red, due allowance must be made for the inferior brightness of the less powerful part of the light. The first-named light may, on account of distance or haze, show flashes only, and the true characteristic will not be observed until the observer comes within the range of the fixed light; similarly the second named may show as occulting white until the observer comes within the range of the red light. Also, where there are two fixed lights, one white and one red, the latter may be obscured, and the station may appear to show only a fixed white light. At short distances and in clear weather flashing lights may show a faint continuous light.

Light Sectors—In some conditions of the atmosphere white lights may have a reddish hue; the mariner therefore, should not trust solely to color where there are sectors, but should verify the position by taking a bearing of the light. On either side of the line of demarcation between white and red there is always a small sector of uncertain color. It should also be remembered that the edges of a sector of visibility cannot be cut off shortly, and that instead of suddenly disappearing the light fades gradually away after the line given as the limit of visibility has been crossed. When a light is cut off by adjoining land, and the arc of visibility is given in the Light List or Chart, it must be remembered that the bearing on which the light disappears will, in many cases, vary with the distance of the ship observing it. When the light is cut off by a sloping point of land or hill the light may be seen over a wider arc by a ship far off than by one close to.

Fog Signals—Mariners are cautioned that, while every endeavor will be made to start fog signals as soon as possible after signs of fog have been observed, they should not, when approaching the land in a fog, rely implicitly upon these fog signals, but should always use the lead, which in most cases will give sufficient warning. A fog often creeps imperceptibly toward the land and a vessel may have been in it some time before it is observed at a lighthouse. As sound is conveyed irregularly through the atmosphere, mariners are strongly cautioned that they must not place dependence on judging their distance from a fog signal by the power of the sound. Under certain conditions of the atmosphere the sound may be lost a short distance from the station, as there may be silent areas or zones, or the sound may carry much farther in one direction than in another, and these conditions may vary in the same locality within short intervals of time. Radio fog signals for use of vessels equipped with radio direction finders have been established at Sea Girt Light Station, N. J., and on Ambrose Channel (N. Y. harbor) and Fire Island (N. Y.) light vessels.

NOTE—"T," trace, snow less than 0.1 inch.

MISCELLANEOUS DATA FOR 1920.

BAROMETRIC PRESSURE (reduced to sea level)—Mean, 30.02 inches; highest, 31.00 inches, Feb. 1; lowes 29.08 inches, March 13.

TEMPERATURE—Greatest daily range, 30°, March 28; least daily range, 4°, Nov. 27. Greatest month range, 57°, March; least monthly range, 28°, August. Highest mean of three consecutive days, 7 Aug. 15-17; lowest mean of three consecutive days, 14°, Jan. 3-5.

PRECIPITATION—Longest period without a measureable amount of precipitation (0.01 inch or more), days, Oct. 17-27. Greatest number of consecutive days with precipitation (0.01 inch or more), Jan. 19-25.

SNOW—Greatest amount in 24 hours, 6.0 inches, Feb. 5. Greatest depth of snow on the ground, measur at 8 P. M., 12.0 inches, Feb. 6. Last snow in spring occurred April 9; first snow in autumn occurr Nov. 15.

FROST—In spring: last killing frost occurred April 10; last light frost occurred April 18. In autumn: fir light frost occurred Sept. 20; first killing frost occurred Nov. 12.

THUNDERSTORMS—First, March 15; last, Dec. 5.

HAIL—April 2; May 21; July 22, 24.

AURORAS—March 22, 23, 24.

COAST LINE OF THE UNITED STATES.

(By the U. S. Coast and Geodetic Survey.)

THE measurements in the Government table below, published as of Nov., 1915, were obtained by the following methods:—

General Coast Line—The figures under this heading give the length in statute miles of the general outline of the seacoast. The measurements were made with a unit measure of 30 minutes of latitude on charts as near the scale of 1-1,200,000 as possible. The shore line of bays, sounds and other bodies of water whose entrance width is greater than the unit measure is included to a point where such waters narrow to the width of the unit measure, and the distance across at such point is included. Where the entrance width of such waters is less than the unit measure, the distance across is included, but the shore line inside is not.

Tidal Shore Line, Unit Measure 3 Statute Miles—The figures under this heading give the length in statute miles of the shore line on tidal waters to points where such waters narrow to a width of 3 statute miles. The figures for Louisiana do not include the shore line of Lakes Maurepas and Pontchartrain, and the delta of the Mississippi River was measured as mainland. The measurements were made on charts of 1-200,000 and 1-400,000 scale when available.

Tidal Shore Line, Unit Measure 1 Statute Mile—The figures under this heading give the length in statute miles of the shore line on tidal waters to points where such waters narrow to a width of *one* statute mile, and include the shore line of those bodies of tidal waters more than 1 mile wide which lie close to the main waters, even though the entrance widtn is less than the unit measure. The measurements were made on charts of 1-80,000 scale for the Atlantic and Gulf coasts, on charts of 1-200,000 scale for the Pacific coast, and on charts as near those scales as available for the other regions.

The island shore line of South Carolina and Georgia includes only those islands shown on the Coast Survey charts by well-defined channels and bayous.

The shore line of Louisiana includes that of Lakes Maurepas and Pontchartrain.

The mainland shore line of the Mississippi delta and the salt marshes to the westward were measured along a line drawn to include the main portions of the land masses. The island shore line includes only those islands outside the same line.

Alaska, the Philippine Islands and United States Samoan Islands were not measured with a unit measure of 1 statute mile, as large areas are unsurveyed, and such a measurement would be very approximate, if not misleading.

The Panama Canal Zone—Islands outside the 3 nautical mile zone were not included.

LENGTHS, IN STATUTE MILES, OF THE GENERAL COAST LINE AND TIDAL SHORE LINE OF THE UNITED STATES AND OUTLYING TERRITORIES.

LOCALITY.	General Coast Line, Unit Measure 30 Minutes Latitude.	TIDAL SHORE LINE, UNIT MEASURE 3 STATUTE MILES.			TIDAL SHORE LINE, UNIT MEASURE 1 STATUTE MILE.

DIMENSIONS AND AREA OF THE UNITED STATES.

The gross area of the United States is 3,026,789 square miles. The land area amounts to 2,973,774 square miles, and the water area—exclusive of the area in the Great Lakes, the Atlantic, the Pacific, and the Gulf of Mexico within the three-mile limit—amounts to 53,015 square miles.

The southernmost point of the mainland is Cape Sable, Fla., which is in latitude 25° 07′ and longitude 81° 05′. The extreme southern point of Texas is in latitude 25° 50′, and longitude 97° 24′. Cape Sable is therefore 49 miles further south than the most southern point in Texas.

A small detached land area of northern Minnesota at longitude 95° 09′ extends northward to latitude 49° 23′.

The easternmost point of the United States is West Quoddy Head, near Eastport, Me., in longitude 66° 57′ and latitude 44° 49′; the westernmost point is Cape Alva, Wash., in latitude 48° 10′, which extends into the Pacific Ocean to longitude 124° 45′.

From the southernmost point in Texas due north to the forty-ninth parallel, the boundary between the United States and Canada, the distance is 1,598 miles. From West Quoddy Head due west to the Pacific Ocean the distance is 2,807 miles. The shortest distance from the Atlantic to the Pacific across the United States is between points near Charleston, S. C., and San Diego, Cal., and is 2,152 miles.

The length of the Canadian boundary line from the Atlantic to the Pacific is 3,898 miles. The length of the Mexican boundary from the Gulf to the Pacific is 1,744 miles.

The average elevation of Delaware is only 60 feet above sea level, according to the United States Geological Survey, less than that of any other State in the Union, although its highest point, at Centreville, New Castle County, is 440 feet above sea level, higher than the highest points in Florida, Louisiana and the District of Columbia.

HIGHEST AND LOWEST CONTINENTAL ALTITUDES.

HEIGHT OF YOSEMITE WATERFALLS ABOVE SEA LEVEL.

The height in feet above sea level of the waterfalls in Yosemite Valley is as follows—Upper Yosemite, 525; Lower Yosemite, 4,420; Nevada, 5,907; Vernal, 5,044; Illilouette, 5,816; Bridalveil, 4,787; Ribbon, 008; Widows Tears, 6,466.

THE VOLCANOES OF HAWAII.

The entire group of Hawaiian Islands, 20 in number, extending in a chain for hundreds of miles, is volcanic origin, though some of the islets and reefs are but the wave-battered remnants of volcanoes hose fires died out long ago. The island of Hawaii has been formed by the coalescence of many recently rmed volcanoes. The walls of the crater of the active volcano of Kilauea, on this island, are broken wn on one side, giving access to its "lake of fire." This volcano has not always been gentle in its ways, t it is now so well behaved that the visitor can stand safely on the edge of its fiery pit and, if the volcano active, watch the molten rock boiling and spouting 100 to 300 feet below. Sometimes many fountains row up jets of glowing sulphurous lava and light up with ghastly glare the frowning crags that rim the ater. Then, suddenly and with deafening detonations, the jets rush together and convert the lake to a burning, seething, roaring mass, making a scene to which few others in the world are comparable. auna Loa, on the island of Hawaii and a neighboring volcanic cone, Mauna Kea, both nearly 14,000 feet ove the sea, are among the highest island mountains in the world. On the other islands of the Hawaiian oup there are volcanic mountains scarcely less interesting The crater of Haleakala, in the summit of ast Maui, 10,000 feet above sea level, is one of the largest extinct craters in the world and is as well preerved as if its fires had been extinguished but a few years, instead of perhaps several hundred years ago.

The active volcanoes of Hawaii give a wonderful demonstration of the processes by which all these and mountains have been built up from the great depths of the ocean. Since the days of Capt. Cook, ologists and others who are interested in the problems of volcanoes have visited the Hawaiian Islands d written about them. Near the base of these mountains of igneous rock lie fields of sugar cane, which e just now of special interest. They are supplied with water from mountain streams and from wells d drainage tunnels that tap underground supplies.

AREA OF THE GREAT LAKES OF THE UNITED STATES.

(Revised by Gilbert H. Grosvenor, Director National Geographic Society, Washington, D. C.)

	Superior.	Michigan.	Huron.	Erie.	Ontario
Greatest length in miles	360	307	206	241	193
Greatest breadth in miles	160	118	101	57	53

WHY THE WINDS BLOW.

"To the layman the world's rotation plays queer pranks with the atmosphere," says a bulletin of t National Geographic Society, "but scientists find the various swirls following fairly definite laws. T world's winds and their complexity are due in general to two forces: the rapid rotation of the earth whi is imparted to the air surrounding it, and modifications of this motion due to differences in temperature the earth's surface. If the temperature difference did not play a part in the matter, it is probable that the would be only west winds in the temperate and polar zones, and no winds at all in the tropics. The situ tion would be somewhat like that brought about in a glass of liquid at a soda fountain into which a rota stirrer is introduced. The liquid swirls faster and faster until finally it attains practically the speed of t rotating rod. So, but for temperature differences, the earth would have the great sea of air which surrour it swirling with it practically at the speed with which the earth moves at the equator—approximately thousand miles an hour. But since both the earth and the air at the equator would be moving at the sa speed, there would be no wind there.

"As one went from the equator he would find a wind blowing harder and harder as he approached t poles. This wind would be from west to east, the direction in which the earth is turning, and would res from the fact that the air was turning through space actually faster than the earth. For while the surfa of the earth at the equator is moving at about a thousand miles an hour, being on the 'rim of the whee so to speak, the surface in the temperate zones being nearer to the 'hub' is moving at a slower speed. B the air above the equator, swirling at a thousand miles an hour would communicate its speed to the air each slice of it and would tend to throw the entire atmosphere to spinning at the rapid equatorial rate. a result it would outrun the earth between the equator and the poles and create a mighty west wind. a matter of fact much of this assumption is true. The earth does impart its rotary motion to the atmosphe in general, but because of counter influences and side currents due to temperature differences, the assum cal is not found in the tropics. Instead the earth outruns the air somewhat there, and the air, 'draggi as the earth spins under it, makes winds blowing from the east—the famous trade winds. But even thou the atmosphere is moving eastward more slowly than the earth at the equator, it is moving faster than t earth in the temperate zones, and there the prevailing winds are from the west.

"Temperature differences, of course, change the general directions of these 'planetary' winds, especial at the surface of the earth. But in the United States at an elevation of six or seven miles a nearly consta wind may be found blowing from the west at from sixty to seventy-five miles an hour. There seems to ha been much overoptimism in regard to speeds that can be attained by aircraft with the help of these planeta winds. It has been stated in some instances that in upper currents moving at 300 miles an hour, aeroplan with powerful motors could reach speeds of 400 or 500 miles an hour. The difficulty is that no winds ha been found in the upper air by the United States Weather Bureau in many years of observation that muc exceed 100 miles an hour, and the normal speed of the west winds at high altitudes over the United Stat is between 60 and 75 miles an hour."

ANCIENT GREEK AND ROMAN WEIGHTS AND MEASURES.

WITH AMERICAN EQUIVALENTS.

WEIGHTS.

The Roman libra or pound = 10 oz. 18 pwt. 13 5-7 gr., Troy.
The Attica mina or pound = 11 oz. 7 pwt. 16 2-7 gr., Troy.
The Attica talent (60 minæ) = 56 lbs. 11 oz. 0 pwt. 17 1-7 gr., Troy.

DRY MEASURE.

The Roman modus = 1 pk. 2-9 pint.
The Attic chœnix = nearly 1½ pints.
The Attic medimnus = 4 pk. 6 1-10 pints.

LIQUID MEASURE.

The cotyle = a little over ½ pint.
The cyathus = a little over 1½ pints.
The chus = a little over 6⅔ pints.

LONG MEASURE.

The Roman foot = 11 3-5 inches.
The Roman cubit = 1 ft. 5⅘ inches.
The Roman pace = 4 ft. 10 inches.
The Roman furlong = 604 ft. 10 inches.
The Roman mile = 4,835 feet.

The modern drachma equals 19.3 cents. The Roman aureus was worth $4.50.

The Grecian cubit = 1 ft. 6⅕ inches.
The Grecian furlong = 504 ft. 4 1-5 inches.
The Grecian mile = 4,030 feet.

MONEY.

The quadrans = 1 1-10 mills.
The as = 1 3-10 mills.
The sestertius = 3.58 + cents.
The sestertium (1,000 sestertii) = $35.80.
The denarius = 14.35 + cents.
The Attic obolus = 2.39 + cents.
The drachma = 14.35 + cents.
The mina (100 drachmæ) = $14.35 +.
The talent (60 minæ) = $861.00.
The Greek stater was worth $4; the Persian, $5.35. Each coin was of silver, composed of 20 drachmas, each drachma equal in value to 19⅕ cents, American money.

The Greek stater weighed 134.75 grains avoirdupois.

BIBLICAL WEIGHTS REDUCED TO TROY WEIGHT.

	Lbs.	Oz.	Pwt.	Gr.
The Gerah, one-twentieth of a Shekel	0	0	0	12
The Bekah, half a Shekel	0	0	5	0
The Shekel	0	0	10	0
The Maneh, 60 Shekels	2	6	0	0
The Talent, 50 Manehs, or 3,000 Shekels	125	0	0	0

ELECTRICAL UNITS AND THEIR POPULAR DEFINITIONS.

THE watt is the unit expressing electrical power as horsepower (hp) represents power in mechanics; it is equal to the product of the volts (pressure) times amperes (rate of flow). Thus 2 volts times 2 amperes would give in a direct current circuit 4 watts. Electrical energy is sold at so much per watt hour or more generally at a given amount per kilowatt hour—which means 1,000 watt hours. This may represent 1 watt for 1,000 hours or 1,000 watts for 1 hour. 746 watts are equal to one horsepower or inversely 1 kilowatt (kw) is equal to about 1⅓ horsepower.

The horsepower represents the power required to lift a weight of 33,000 pounds 1 foot in 1 minute or 550 pounds 1 foot in 1 second.

The ohm is the unit of electrical resistance and represents the physical property of a conductor which offers a resistance to the flow of electricity, permitting just 1 ampere to flow at 1 volt of pressure. For example, 1,000 feet of copper wire of No. 10 B. and S. gauge has just 1 ohm of resistance and allows the flow of 1 ampere at 1 volt.

FOREIGN MONEY UNITS OF VALUE.

English Money: 4 farthings—1 penny (*d*); 12 pence—1 shilling (*s*); 20 shillings—1 pound (£). 21 shillings—one guinea; 5 shillings—one crown. **French Money:** 100 centimes—1 franc. **German Money:** 100 pfennig—1 mark. **Russian Money:** 100 copecks—1 ruble. **Austro-Hungarian Money:** 100 heller—1 krone (crown).

For United States equivalents see "Foreign Coins valued in U. S. Money" in index.

MEDICAL SIGNS AND ABBREVIATIONS.

℞ (Lat. Recipe), take; ā, of each; ℔, pound; ℥, ounce; ʒ, drachm; ℈, scruple; ♏, minim, or drop; ○ or o, pint; f ℥, fluid ounce; f ʒ, fluid drachm; as, ℥ ss, half an ounce; ℥ i, one ounce, ʒ iss, one ounce and a half; ℥ ij, two ounces; gr., grain; Q. S., as much as sufficient; Ft. Mist., let a mixture be made; Ft. Haust., let a draught be made; Ad., add to; Ad lib., at pleasure; Aq., water; M., mix; Mac., macerate; Pulv., powder; Pil., pill; Solv., dissolve; St., let it stand; Sum., to be taken; D., dose; Dil., dilute; Filt., filter; Lot., a wash; Garg., a gargle; Hor. Decub., at bed time; Inject., injection; Gtt., drops; ss, one-half; Ess., essence.

STANDARD NEWSPAPER MEASURES.

THE Standard Newspaper Measure as recognized and now in general use is 13 ems pica. The standard of measurement of all sizes of type is the "em quad," not the letter "m." The basis of measurement adopted by the International Typographical Union is the lower-case alphabet, from "a" to "z" inclusive, and the ems used are the same body as the type measured.

ROMAN AND ARABIC NUMERALS.

I	1	VI	6	XI	11	XVI	16	XXX	30	LXXX	80
II	2	VII	7	XII	12	XVII	17	XL	40	or XXC	80
III	3	VIII	8	XIII	13	XVIII	18	L	50	XC	90
IV	4	IX	9	XIV	14	XIX	19	LX	60	C	100
V	5	X	10	XV	15	XX	20	LXX	70	CC	200

CCC	300	DCCC	800
CCCC	400	CM	900
D	500	M	1000
DC	600	MM	2000
DCC	700		

NOTE—A dash line over C, D, or M, multiplies their value by 1,000, thus $\overline{C}$ = 100,000, $\overline{D}$ = 500,000, $\overline{M}$ = 1,000,000.

KNOTS AND MILES.

THE Statute Mile is 5,280 feet. The British Admiralty Knot or Nautical Mile is 6,080 feet The Statute Knot is 6,082.66 feet, and is generally considered the standard. The number of feet in a statute knot is arrived at thus: The circumference of the earth is divided into 360 degrees, each degree containing 60 knots or (360x60), 21,600 knots to the circumference. 21,600 divided into 131,385,456—the number of feet in the earth's circumference—gives 6,082.66 feet—the length of a standard mile.

1 knot	= 1.151 miles	4 knots	= 4.606 miles	20 knots	= 23.030 miles	600 feet	= 1 cable
2 knots	= 2.303 miles	5 knots	= 5.757 miles	25 knots	= 28.787 miles	10 cables	= 1 knot
3 knots	= 3.454 miles	10 knots	= 11.515 miles	6 feet	= 1 fathom		

THE ENGLISH OR AMERICAN MILE VS. OTHERS, IN PERCENTAGE VALUES.

The English Statute Mile is the same as the American—1,760 yards, or 5,280 feet. The Danish Foo = 0.9711 English or American feet; the Spanish = 1.0783; the Dutch = 1.0768; the German = 1.0639.

U. S. WEIGHTS AND MEASURES.

Apothecaries' Weight: 20 grains = 1 scruple; 3 scruples = 1 dram; 8 drams = 1 ounce; 12 ounces = 1 pound

Avoirdupois Weight (short ton): 27 11-32 grains = 1 dram; 16 drams = 1 ounce; 16 ounces = 1 pound 25 pounds = 1 quarter; 4 quarters = 1 cwt.; 20 cwt. = 1 ton.

Avoirdupois Weight (long ton): 27 11-32 grains = 1 dram; 16 drams = 1 ounce; 16 ounces = 1 pound 112 pounds = 1 cwt.; 20 cwt. = 1 ton.

Troy Weight: 24 grains = 1 pennyweight; 20 pennyweights = 1 ounce; 12 ounces = 1 pound.

Circular Measure: 60 seconds = 1 minute; 60 minutes = 1 degree; 30 degrees = 1 sign; 12 signs = 1 circle or circumference.

Cubic Measure: 1,728 cubic inches = 1 cubic foot; 27 cubic feet = 1 cubic yard.

Dry Measure: 2 pints = 1 quart; 8 quarts = 1 peck; 4 pecks = 1 bushel.

Liquid Measure: 4 gills = 1 pint; 2 pints = 1 quart; 4 quarts = 1 gallon; 31½ gallons = 1 barrel; barrels = 1 hogshead.

Long Measure: 12 inches = 1 foot; 3 feet = 1 yard; 5½ yards = 1 rod or pole; 40 rods = 1 furlong 8 furlongs = 1 statute mile (1,760 yards or 5,280 feet); 3 miles = 1 league.

Mariners' Measure: 6 feet = 1 fathom; 120 fathoms = 1 cable length; 7½ cable lengths = 1 mile 5,280 feet = 1 statute mile; 6,085 feet = 1 nautical mile.

Paper Measure: 24 sheets = 1 quire; 20 quires = 1 ream (480 sheets); 2 reams = 1 bundle; 5 bundles = 1 bale.

Square Measure: 144 square inches = 1 square foot; 9 square feet = 1 square yard; 30¼ square yard = 1 square rod or perch; 40 square rods = 1 rood; 4 roods = 1 acre; 640 acres = 1 square mile; 36 square miles (6 miles square) = 1 township.

Time Measure: 60 seconds = 1 minute; 60 minutes = 1 hour; 24 hours = 1 day; 7 days = 1 week 365 days = 1 year; 366 days = 1 leap year.

BRITISH MEASURES AND WEIGHTS.

THE British imperial bushel is about 3 per cent. larger than the U. S. standard bushel. The former contains 2219.36 cubic inches, and is defined as the volume of 80 pounds of pure water, at 62° F. when weighed against brass weights in air at a pressure of 30 inches of mercury; while the latter measure contains 2150.42 cubic inches. The English ton is 2,240 lbs. avoirdupois, the same as the long ton, or shipping ton, of the United States. The English hundredweight is 112 lbs. avoirdupois, the same as the long hundredweight of the United States. The English stone equals one-eighth the hundredweight of 112 lbs., or 14 lbs. avoirdupois. The stone of meat is 8 lbs. and the stone of flour and fish 14 lbs. The cubit is the length of the forearm from the elbow to the end of the middle finger. The English cubit is 18 inches. The English ell is 45 inches and the Scottish ell 37.2 inches. The hand, still used for measuring horses, is 4 inches.

The statute mile and the statute acre are based on the statute perch of 5½ yards. The mile is 320 perches (1,760 yards), and the acre 160 square perches (4,840 square yards). In former times other mile and acres, based on different perches, were also used, among which were: The Scottish mile was 320 fall or Scottish perches, each of 6 Scottish ells (1,984 yards). The Scottish mile was about 1⅛ statute miles The Irish mile was 320 Irish perches, each of 7 yards (2,240 yards). Eleven Irish miles were equal to 1 statute miles. The Scottish acre contained 160 falls, or square Scottish perches (6,150.4 square yards) It was equal to 1.27 statute acres. The Cunningham acre contained 160 square perches, the perch being 6¼ yards (6,250 square yards). It was equal to 1.29 statute acres. The Irish acre contained 160 square Irish perches (7,840 square yards). It was a little more than 1⅝ statute acres. The Cheshire acre contained 160 square perches, each perch being 8 yards (10,240 square yards). It was nearly equal to 2½ statute acres.

The hide was an ancient measure of land, which varied in different parts of the country, but the average was 120 acres. A yard of land—virgate, or farthing land—was a quarter of a hide. In some counties the hide was called a caracute, which was divided into eight bovates. In the time of Domesday Book (A. D. 1086) a hide was worth, on the average, £1 per annum; a knight's fee was usually five hides.

The imperial gallon, the basis of the system of capacity, involves an error of about 1 part in 1,836 10 lbs. of water = 277.123 cubic inches. The gallon is defined in the Act of 1878 as the volume of 10 imperial standard pounds weight of distilled water weighed in air against brass weights, with the water and air at the temperature of 62° F., and the barometer at 30 inches.

Of the apothecaries' measure of weight the grain is the same as the avoirdupois grain, and the apothecaries' ounce contains 480 grains, like the troy ounce. But, of the measures of capacity, the apothecaries' drachm is not the same as the avoirdupois dram, and the words are spelled differently. A fluid ounce of distilled water at a temperature of 62° F. is equal in weight to the avoirdupois ounce (437.5 grains), and the fluid drachm (54.6875 grains), is equal in weight to 2 avoirdupois drams.

Names.		Pounds of Water.	Cubic Inches.	Litres.	United States' Equivalents.
gills	= 1 pint	1.25	34.66	0.56793	1.20032 liquid pints.
pints	= 1 quart	2.5	69.32	1.13586	1.20032 " quarts.
quarts	= 1 pottle	5	138.64	2.27173	2.40064 " "
pottles	= 1 gallon	10	277.27	4.54346	1.20032 " gallons.
gallons	= 1 peck (Dry measure)	20	554.55	9.08692	1.03152 dry pecks.

bushels	= 1 coomb	320	8872.77	145.39062	4.12606 " "
coombs	= 1 quarter	640	17745.54	290.7813	8.2521 " "

A cubic foot of pure gold weighs 1,210 pounds; pure silver, 655 pounds; cast iron, 450 pounds; copper, 550 pounds; lead, 710 pounds; pure platinum, 1,220 pounds; tin, 456 pounds; aluminum, 163 pounds.

Size of Barrels.

Firkin or quarter barrel	9 gallons	Tierce	42 gallons
Anker (10 gallons)	10 gallons	Hogshead of ale (1½ barrels)	54 gallons
Kilderkin, rundlet, or ½ barrel	18 gallons	Puncheon	72 gallons
Barrel	36 gallons	Butt of ale	108 gallons

Bottle Measure.

The customary glass bottle of wine or spirits should contain one-sixth of a gallon, or 26⅔ fluid ounces. In the drug trade two large bottles are used, the corbyn, of 40 fluid ounces (quart), and the Winchester quart, of 80 fluid ounces (½ gallon).

PHILIPPINE WEIGHTS AND MEASURES.

1 pulgada (12 lineas)	= .927	inch.	1 libra (16 onzo)	= 1.0144	lb. av.
1 pie	= 11.125	inches.	1 arroba	= 25.360	lb. av.
1 vara	= 33.375	inches.	1 catty (16 tael)	= 1.394	lb. av.
1 gantah	= .8796	gallon.	1 pecul (100 catty)	= 139.482	lb. av.
1 caban	= 21,991	gallons.			

SPECIFIC GRAVITY

OF VARIOUS SUBSTANCES, COMPARED WITH WATER.

Liquids.		*Timber.*		*Sundries.*		*Metals and Stones.*	
Water	100	Cork	24	Indigo	77	Granite	278
Sea-water	103	Poplar	38	Ice	92	Diamond	353
Dead Sea	124	Fir	55	Gunpowder	93	Cast Iron	721
Alcohol	84	Cedar	61	Butter	94	Tin	729
Turpentine	99	Pear	66	Clay	120	Bar Iron	779
Wine	100	Walnut	67	Coal	130	Steel	783
Brine	101	Cherry	72	Opium	134	Brass	840
Cider	102	Maple	75	Honey	145	Copper	895
Beer	102	Ash	84	Ivory	183	Silver	1,047
Woman's milk	102	Beech	85	Sulphur	203	Lead	1,135
Cow's "	103	Mahogany	106	Marble	270	Mercury	1,357
Goat's "	104	Oak	117	Chalk	279	Gold	1,926
Porter	104	Ebony	133	Glass	289	Platina	2,150

The weight of a cubic foot of distilled water at a temperature of 60° F. is 1,000 ounces avoirdupois, *very nearly*, therefore the weight (in ounces, avoirdupois) of a cubic foot of any of the substances in the above table is found by multiplying the specific gravities by 10, thus:—one cubic foot of oak weighs 1,170 ounces; one cubic foot of marble 2,700 ounces, and so on.

SPECIFIC GRAVITY OF GASES.

Name.	Chemical Formula.	Specific Gravity.	Name.	Chemical Formula.	Specific Gravity.
Oxygen	O	1.105	Methane	CH_4	.555
Nitrogen	N	.967	Acetylene	C_2H_2	.906
Carbon dioxide	CO_2	1.529	Hydrogen	H	.070
Carbon monoxide	CO	.967	Hydrogen sulphide	H_2S	1.191

TEXAS (SPANISH) LAND MEASURE.

(Also used in Mexico, New Mexico, Arizona, and California.)

26,000,000	square varas (square of 5,099	varas) = 1 league and 1 labor	= 4,605.5	acres.
1,000,000	square varas (square of 1,000	varas) = 1 labor	= 177.136	acres.
25,000,000	square varas (square of 5,000	varas) = 1 league	= 4,428.4	acres.
12,500,000	square varas (square of 3,535.5	varas) = ½ league	= 2,214.2	acres.
8,333,333	square varas (square of 2,886.7	varas) = ⅓ league	= 1,476.13	acres.
6,250,000	square varas (square of 2,500	varas) = ¼ league	= 1,107.1	acres.
7,225,600	square varas (square of 2,688	varas)	= 1,280	acres.
3,612,800	square varas (square of 1,900.8	varas = 1 section	= 640	acres.
1,806,400	square varas (square of 1,344	varas) = ½ section	= 320	acres.
903,200	square varas (square of 950.44	varas) = ¼ section	= 160	acres.
451,600	square varas (square of 672	varas) = ⅛ section	= 80	acres.
225,800	square varas (square of 475	varas) = 1-16 section	= 40	acres.
5.645.376	square varas (square of 75.137	varas) = 4,840 square yards	= 1	acre.

To find the number of acres in any number of square varas, multiply the latter by 177 (or to be more exact, by 177⅓), and cut off six decimals.

1 vara = 33⅓ inches. 1,900.8 varas = 1 mile.

WEIGHT OF WATER.

1	cubic inch	.03617	pound.	1	cylindrical foot	6.0	U. S. gs
12	cubic inches	.434	pound.	2.282	cylindrical feet	112.0	pounds.
1	cubic foot	62.5	pounds.	45.64	cylindrical feet	2240.0	pounds.
1	cubic foot	7.48052	U. S. gals.	1	imperial gallon	10.0	pounds.
1.8	cubic feet	112.0	pounds	11.2	imperial gallons	112.0	pounds.
35.84	cubic feet	2240.0	pounds.	224	imperial gallons	2240.0	pounds.
1	cylindrical inch	.02842	pound.	1	U. S gallon	8.355	pounds.
12	cylindrical inches	.341	pound.	13.44	U. S gallons	112.0	pounds
1	cylindrical foot	49.10	pounds.	268.8	U. S. gallons	2240.0	pounds

NOTE—The centre of pressure of water against the side of the containing vessel or reservoir is at t thirds the depth from the surface. One cubic foot salt water weighs 64.3 pounds.

THEORETICAL VELOCITY OF WATER IN FEET PER SECOND.

HEAD, FEET.	Velocity, Feet per Second.	HEAD, FEET.	Velocity, Feet per Second.	HEAD, FEET.	Velocity, Feet per Second.	HEAD, FEET.	Velocity, F per Secon

Tensile Strength is resistance to separation. The fibres of wood are strongest near the centre the trunk or limb.

AREAS OF CIRCLES.

To find the circumference of a circle multiply the diameter by 3.14159265 (commonly expressed as 3.1416). To find the area of a circle multiply the square of the diameter by .785398 (usually expressed as .7854). To find the cubic contents of a cylinder or pipe, multiply the area by the heighth or depth. Thus, a pipe 1 foot in diameter and 1 foot in length, contains .7854 cubic feet. To find how many gallons are contained in a pipe or cylinder, divide the cubic contents by 231, which is the number of cubic inches in a United States gallon.

SPEED OF A FALLING BODY.

(By Prof. George B. Pegram of Columbia.)

In the first second of its descent a body falls 16 feet; second second, 16+32=48 feet; third second, 16+64=80 feet; fourth second, 16+96=112 feet; fifth second, 16+128=144 feet; nth second, 16+32 (n-1) feet.

The total distance fallen by a body at the end of the nth second is 16n² feet, thus at the end of the first second it has fallen 16 feet, at the end of the second 64 feet, at the end of the fifth 400 feet. The figures given above are only approximate ones and in them no account is taken of air resistance. As the air resistance encountered by a falling body depends on the shape and size of the body no general rule can be given for taking account of it, except to say that the air resistance increases with the velocity. The force of gravity on a body one mile above the surface of the earth is less than if the body were at the surface of the earth by about one-twentieth of one per cent., a difference which it would be difficult to measure in the case of fall of the body.

FOREIGN WEIGHTS AND MEASURES.

(For "Foreign Coins Valued in U. S. Money" See Index.)

Denominations.	Where Used.	American Equivalents.
Almude	Portugal	4.422 gals.
Ardeb	Egypt	7.6907 bu.; and, at Cairo, it equals 4.92 Imp. bu., or 5.07 Winch'r bu.
Are	Metric	0.02471 acre.
Arobe	Paraguay	25 lbs.
Arratel or libra	Portugal	1.011 lbs.
Arroba (dry)	Argentine Republic	25.3175 lbs.
"	Brazil	32.38 lbs.
"	Cuba	25.3664 lbs.

MELTING POINTS OF CHEMICAL ELEMENTS, ETC.

(By the Bureau of Standards, U. S. Dept. of Commerce.)

The values of the melting points used by the Bureau of Standards as standard temperatures for the calibration of thermometers and pyrometers are indicated in capitals. The other values have been assigned after a careful survey of all the available data. As nearly as may be, all values, in particular the standard points, have been reduced to a common scale, the thermodynamic scale. For all purposes, except the most accurate investigations, the thermodynamic scale is identical with any of the gas scale. At high temperatures some of the values are quite uncertain; thus, while the melting point of platinum may be considered accurately known to 10° C., that of tungsten is possibly uncertain by 50° C. or more. Temperatures centigrade are rounded off, and the exact Fahrenheit equivalents are usually given.

MELTING POINTS OF THE CHEMICAL ELEMENTS.

Element.	C.	F.	Element.	C.	F.	Element.	C.	F.

Every human death may be attributed to one of three causes: (1) Interference with respiration (asphyxia or apnea); (2) Interference with the heart's action (syncope), and (3) Interference with the nervous system (coma or shock). The number of distinct diseases producing death is limited.

The length of the humerus multiplied by 5.06, or the length of the femur multiplied by 3.66, equals the height of the man. Thus the height of prehistoric peoples can be worked out.

In height man may vary from 1m. 25 (4 feet 1 inch) to 1m. 99 (6 feet 6¾ inches). Below 1m. 25 man is abnormal or pathological (dwarfism); above 2 meters man is also abnormal (giantism). Both these extremes are sterile. The extreme averages of different populations run from 1m. 38 (4 feet 6 inches) to 1m. 79 (5 feet 10.5 inches); the Scots of Galloway or Scots of the North are 1m. 78. The stature of man is not more than 2 or 3 centimeters higher than his skeleton.

The length of the trunk in man is more than one-third and less than two-fifths of the height. The arm reach in American soldiers, compared to their height, is as 1,043 to 1,000. The brains of the highest apes are much less complex in their convolutions and much less in both relative and absolute weight. The gorilla's brain barely exceeds twenty ounces in weight, while man's brain hardly weighs less than thirty-two.

From 11,000 brains weighed, Topinard finds an average weight of 1,361 grains for man and 1,290 grains for woman.

The gray substance represents 37 to 38 per cent. of the total weight of the brain. The differences in the form and the dimensions of the skull in correlation with those of the brain serve to distinguish races and species. Thus the Inka bone (one of the wormian bones), between the parietal and occipital bones is frequent in Peruvian crania—20 times in 100; in negroes 6 times; in Europeans it is still more rare; among Indians of Arizona this bone is more frequent than among Peruvians. The suture of the alar bone is peculiar to Japanese crania—25 to 40 per cent., and only 9 per cent. in European races.

The Metric System.

(Prepared for the U. S. Government by the Bureau of Standards. Department of Commerce.)

UNITS OF WEIGHT AND MEASURE.

THE fundamental unit of the metric system is the meter, the unit of length. From this the units of capacity (liter) and of weight (gram) were derived. All other units are the decimal subdivisions or multiples of these. These three units are simply related, e. g., for all practical purposes 1 cubic decimeter equals 1 liter and 1 liter of water weighs 1 kilogram. The metric tables are formed by combining the words "meter," "gram," and "liter" with the six numerical prefixes, as in the following tables:

PREFIXES. Meaning.		Units.	PREFIXES. Meaning.		Units.
milli- = *one-thousandth*	.001		deka- = *ten*	10	
centi- = *one hundredth*	.01	"meter" *for length*	hecto- = *one hundred*	100	"liter" *for capacity.*
deci- = *one-tenth*	.1	"gram" *for weight*	kilo- = *one thousand*	1000	
Unit = *one*	1	*or mass.*			

All lengths, areas, and cubic measures in the following tables are derived from the international meter, the legal equivalent being 1 meter = 39.37 inches (law of July 28, 1866). In 1893 the United States Office of Standard Weights and Measures was authorized to derive the yard from the meter, using for the purpose the relation legalized in 1866, 1 yard = 3600-3937 meter. The customary weights are likewise referred to the kilogram (Executive order approved April 5, 1893). This action fixed the values, inasmuch as the reference standards are as perfect and unalterable as it is possible for human skill to make them at this time. All capacities are based on the equivalent 1 liter equals 1.000027 cubic decimeters. The decimeter is equal to 3.937 inches in accordance with the legal equivalent of the meter given above. The gallon referred to in the tables is the United States gallon of 231 cubic inches. The bushel is the United States bushel of 2,150.42 cubic inches. These units must not be confused with the British units of the same name, which differ from those used in the United States. The British gallon is approximately 20 per cent larger and the British bushel 3 per cent larger than the corresponding units used in this country. The customary weights derived from the international kilogram are based on the value 1 avoirdupois pound = 453.5924277 grams. The value of the troy pound is based upon the relation just mentioned and also the equivalent 7000-7760 avoirdupois pounds equals 1 troy pound.

DEFINITIONS OF UNITS.

LENGTH.

Fundamental Units—A meter (m) is a unit of length equivalent to the distance between the defining lines on the international prototype meter at the International Bureau of Weights and Measures when this standard is at the temperature of melting ice (0° C).

A yard (yd.) is a unit of length equivalent to 3600-3937 of a meter.

Multiples and submultiples:

1 kilometer = 1000 meters.
1 hectometer = 100 meters.
1 dekameter = 10 meters.
1 decimeter = 0.1 meter.
1 centimeter = 0.01 meter.
1 millimeter = 0.001 meter = 0.1 centimeter.
1 micron = 0.000001 meter = 0.001 millimeter.
1 millimicron = 0.000 000 001 meter = 0.001 micron
1 foot = 1-3 yard = 1200-3937 meter.
1 inch = 1-36 yard = 1-12 foot = 100-3937 meter.
1 link = 0.22 yard = 7.92 inches.

1 rod = 5½ yards = 16½ feet.
1 chain = 22 yards = 100 links = 66 feet = 4 rods.
1 furlong = 220 yards = 40 rods = 10 chains.
1 statute mile = 1760 yards = 5280 feet = 320 rods.
1 hand = 4 inches.
1 point = 1-72 inch.
1 mil = 0.001 inch.
1 fathom = 6 feet.
1 span = 9 inches = 1-8 fathom.
1 nautical mile = United States = 6080.20 feet
1 sea mile = = 1.151 553 statute miles
1 geographical mile = = 1853.249 meters.

AREA.

Fundamental Units:

A square meter is a unit of area equivalent to the area of a square the sides of which are 1 meter.

A square yard is a unit of area equivalent to the area of a square the sides of which are 1 yard.

Multiples and Submultiples:

1 square kilometer = 1,000,000 square meters.
1 hectare or square hectometer = 10,000 square meters.
1 are or square dekameter = 100 square meters.
1 centare = 1 square meter.
1 square decimeter = 0.01 square meter.
1 square centimeter = 0.0001 square meter.

1 square millimeter = 0.000 001 square meter = 0.01 square centimeter.
1 square foot = 1-9 square yard.
1 square inch = 1-1296 square yard = 1-144 square foot.
1 square link = 0.0484 square yard = 62.7264 square inches.
1 square rod = 30.25 square yards = 272.25 square feet = 625 square links.
1 square chain = 484 square yards = 16 square rods = 100,000 square links.
1 acre = 4840 square yards = 160 square rods = 10 square chains.
1 square mile = 3,097,600 square yards = 640 acres.

VOLUME.

Fundamental Units:

A cubic meter is a unit of volume equivalent to a cube the edges of which are 1 meter.

A cubic yard is a unit of volume equivalent to a cube the edges of which are 1 yard.

Multiples and Submultiples:

1 cubic kilometer = 1,000,000,000 cubic meters.
1 cubic hectometer = 1,000,000 cubic meters.
1 cubic dekameter = 1000 cubic meters.
1 stere = 1 cubic meter.

1 cubic decimeter = 0.001 cubic meter.
1 cubic centimeter = 0.000001 cubic meter = 0.001 cubic decimeter.
1 cubic millimeter = 0.000000001 cubic meter = 0.001 cubic centimeter.
1 cubic foot = 1-27 cubic yard.
1 cubic inch = 1-46656 cubic yard = 1-1728 cubic foot.
1 board foot = 144 cubic inches = 1-12 cubic foot.
1 cord = 128 cubic feet.

CAPACITY.

Fundamental Units:

A liter is a unit of capacity equivalent to the volume occupied by the mass of 1 kilogram of pure water at its maximum density (at a temperature of 4° C, practically) and under the standard atmospheric pressure (of 760 mm). It is equivalent in volume to 1.000027 cubic decimeters.

A gallon is a unit of capacity equivalent to the volume of 231 cubic inches. It is used for the measurement of liquid commodities only.

A bushel is a unit of capacity equivalent to the volume of 2150.42 cubic inches. It is used in the measurement of dry commodities only.

The above bushel is the so-called stricken or struck bushel. Many dry commodities are sold by heaped

DEFINITIONS OF UNITS—*Continued.*

CAPACITY—*Continued.*

Fundamental Units.

bushel, which is generally specified in the State laws to be the usual stricken bushel measure "duly heaped in the form of a cone as high as the article will admit" or "heaped as high as may be without special effort or design." The heaped bushel was originally intended to be 25 per cent greater than the stricken bushel.

Multiples and Submultiples:

1 hectoliter = 100 liters.
1 dekaliter = 10 liters.
1 deciliter = 0.1 liter.
1 centiliter = 0.01 liter.
1 milliliter = 0.001 liter = 1.000027 cubic centimeters.
1 liquid quart = 1-4 gallon = 57.75 cubic inches.
1 liquid pint = 1-8 gallon = 1-2 liquid quart = 28.875 cubic inches.
1 gill = 1-32 gallon = 1-4 liquid pint = 7.21875 cubic inches.
1 fluid ounce = 1-128 gallon = 1-16 liquid pint.
1 fluid dram = 1-8 fluid ounce = 1-128 liquid pint
1 minim = 1-60 fluid dram = 1-480 fluid ounce.
1 firkin = 9 gallons.
1 peck = 1-4 bushel = 537.605 cubic inches.
1 dry quart = 1-32 bushel = 1-8 peck = 67.20062[illegible] cubic inches.
1 dry pint = 1-64 bushel = 1-2 dry quart = 33.600[illegible] 3125 cubic inches.
1 barrel (for fruit, vegetables and other dry commodities) = 7056 cubic inches = 105 dry quarts

The barrel capacity was fixed by United States statute, approved March 4, 1915.

MASS.

Fundamental Units:

A kilogram is a unit of mass equivalent to the mass of the international prototype kilogram at the International Bureau of Weights and Measures.

An avoirdupois pound is a unit of mass equivalent to 0.4535924277 kilogram.

A gram is a unit of mass equivalent to one-thousandth of the mass of the international prototype kilogram at the International Bureau of Weights and Measures.

A troy pound is a unit of mass equivalent to 5760-7000 of that of the avoirdupois pound.

Multiples and Submultiples.

1 metric ton = 1000 kilograms.
1 hectogram = 100 grams = 0.1 kilogram.
1 dekagram = 10 grams = 0.01 kilogram.
1 decigram = 0.1 gram.
1 centigram = 0.01 gram.
1 milligram = 0.001 gram.
1 avoirdupois ounce = 1-16 avoirdupois pound.
1 avoirdupois dram = 1-256 avoirdupois pound = 1-16 avoirdupois ounce.
1 gram = 1-700 avoirdupois pound = 10-437[illegible] avoirdupois ounce = 1-5760 troy pound.
1 apothecaries' pound = 1 troy pound = 5760-700[illegible] avoirdupois pound.
1 apothecaries' or troy ounce = 1-12 troy pound = 480-7000 avoirdupois pound = 480 grains.
1 apothecaries' dram = 1-96 apothecaries' pound = 1-8 apothecaries' ounce = 60 grains.
1 pennyweight = 1-20 troy ounce = 24 grains.
1 apothecaries' scruple = 1-3 apothecaries' dram = 20 grains.
1 metric carat = 200 milligrams = 0.2 gram.
1 short hundredweight = 100 avoirdupois pounds
1 long hundredweight = 112 avoirdupois pounds
1 short ton = 2000 avoirdupois pounds.
1 long ton = 2240 avoirdupois pounds.

STANDARDS FOR MEASUREMENT.

Units of measurement should be distinguished from standards for measurement, particularly in the case of length and capacity. Units of length are fixed distances, independent of any other consideration, while length standards are affected by the expansion and contraction with changes of temperature of the material of which the standard may be composed. It is therefore necessary to fix upon some temperature at which the distance between the defining lines or end surfaces of the standards shall be equal to the unit. The same is true of standards of capacity, which at some definite temperature contain a given number of units of volume. The temperature at which metric length standards are customarily made correct is 0° C, although 20° C is also used for steel tapes and some other standards intended for use at room or average outdoor temperatures. The temperature at which standards of length of the customary system are made correct is 62° F.

For measurements of high precision it is also necessary to specify the manner of support of the standards, whether at certain points only or throughout their entire length, and in the case of tapes it is also necessary to give the tension applied to the tape when in use. In the United States the capacity standards, both metric and customary, are made to hold the specified volumes at 4° C. Standards of capacity are usually made of brass so the capacity at any other temperature may be computed by the use of the coefficient of cubical expansion, usually assumed to be 0.000054 per degree centigrade. In the purchase and sale of liquids a more important consideration than the temperature of the measures is the temperature of the liquid when measured, for the reason that the large coefficient of expansion of many liquids makes the actual mass of a given volume delivered vary considerably with temperature. For this reason, the custom of buying and selling liquids by weight instead of by measure is recommended. It is further recommended that, when liquids are sold by volume, 68° F or 20° C be adopted as the standard temperature of the liquid.

While the temperature of a weight does not affect its mass, it is nevertheless important that when two weights are compared in air they both be at the same temperature as the air. If there is a difference between the temperature of the air and the weights, convection currents will be set up and the readings of the balance will be thereby affected. Also, since weights are buoyed up by the surrounding air by amounts dependent upon their volumes, it is desirable that the weights of any set be of the same material. If two weights of the same density balance in air of a certain density they will balance in vacuo or in air of a different density. Brass is the material most widely used for standard weights, although platinum is quite commonly used for weights of 1 gram or less. In the absence of any knowledge as to the actual density of weights those made of brass are assumed to have a density of 8.4 at 0° C, while those of platinum are assumed to have a density of 21.5 at 0° C.

SPELLING AND ABBREVIATION OF UNITS.

The spelling of the names of units adopted by the National Bureau of Standards is that given in the list below. The spelling of the metric units is in accordance with that given in the law of July 28, 1866 legalizing the metric system in the United States. Following the names of each unit in the list below is given the abbreviation which the Bureau has adopted. Attention is called to the following principles: 1. The period is omitted after the abbreviations of the metric units, while it is used after those of the customary system. 2. The exponents, "2" and "3," are used to signify area and volume, respectively, in the case of the metric units instead of the longer prefixes "sq." or "cu." In conformity with this principle the abbreviation for cubic centimeter is "cm3," instead of "c. c." or "c. cm." The term "cubic centimeter" as used in chemical work is, in fact, a misnomer, since the unit actually used is the "milliliter," which has a slightly larger volume. 3. The use of the same abbreviation for both singular and plural is recommended. This practice is already established in expressing metric units and is in accordance with the spirit and chief purpose of abbreviations. 4. It is also suggested that, unless all the text is printed in capital letters, only small letters be used for abbreviations except in the case of A. for acre, where the use of the capital letter is general.

FEET, YARDS, MILES, ACRES, QTS, ETC., WITH METRIC EQUIVALENTS.

(By S. W. Stratton, Director of the United States Bureau of Standards, Department of Commerce.)

The metric system was made permissable in the United Kingdom in 1897. The Royal Commission ich reported on the subject in 1904 stated that the system was first introduced in France in 1793, and ook 47 years before the final establishment. In the Netherlands the date of first introduction was 1816, t at the end of 80 years the system was not generally adopted. The circumstances in Germany were re favorable, and the introduction of the measure in 1868 was followed by adoption in 1872, shortly er the many changes incident to the birth of the Empire. When the British Isles changed from the nchester to imperial measures in 1824 it took until 1838 to carry out the change.

TEST LIST OF WORDS TO DEFINE.

(By Prof. Lewis M. Terman of Stanford Univ.)

nge	mellow	insure	coinage	philanthropy	retroactive
ifire	pork	stave	mosaic	irony	achromatic
r	impolite	regard	bewail	lotus	ambergris
vn	plumbing	nerve	disproportionate	drabble	casuistry
	outward	crunch	dilapidated	harpy	paleology
rch	lecture	juggler	charter	embody	perfunctory
idle	dungeon	majesty	conscientious	infuse	precipitancy
relop	southern	brunette	avarice	flaunt	theosophy
aw	noticeable	snip	artless	declivity	piscatorial
e	muzzle	apish	priceless	fen	sudorific
te	quake	sportive	swaddle	ochre	parterre
oat	civil	hysterics	tolerate	exaltation	homunculus
lash	treasury	Mars	gelatinous	incrustation	cameo
per	reception	repose	depredation	laity	shagreen
lth	ramble	shrewd	promontory	selectman	limpet
se	skill	forfeit	frustrate	saplent	complot
tar	misuse	peculiarity	milksop		

Ability to give seventy-five definitions from the above list indicates the possession of a working vo- ulary of 13,500 words according to the professor.

MILITARY SHARPSHOOTERS' AVERAGE CHART.

(Compiled by the du Pont Company.)

THE figures in the "out of" columns represent the percentage of 100, or perfect score, achieved by the marksman who makes the misses indicated in the "missing" column.

MISSING.	Out of 15	Out of 20	Out of 25	Out of 30	Out of 40	Out of 45	Out of 50	Out of 60	Out of 75	Out of 80	Out of 90	Out of 100	Out of 105	Out of 120	Out of 125	Out of 135	Out of 140	Out of 150	Out of 160	Out of 175	Out of 180

NOTE—White in conjunction with a color intensifies that color. Black has the opposite effect. When three colors are used to obtain a contrast, a more pleasing effect will result if two of these colors are blends and the third is a contrast than if three contrasting colors are combined. Any three blends, however, may be used together. In these harmonies the best effect is obtained if one color predominates, the second color is less prominent and the third color is subordinate to the other two.

POISONS AND THEIR ANTIDOTES.

(From American National Red Cross textbook on first aid.)

TABLE I.—*Poisons for which an emetic is always given first.*

POISON.	Symptoms.	Treatment (Besides Emetic)
UNKNOWN.....	.....	Stimulants; soothing liquids.
ALCOHOL: In any form—rum, gin, whiskey, proof spirits, etc., also methyl alcohol.	Giddiness, swaying of body, inability to stand. Face flushed, eyes red, skin clammy, weak pulse, may be convulsions and unconsciousness.	Hot coffee or aromatic spirit ammonia. Try to arouse, b weak do not exhaust by ma walk. Dash cold water on face chest. When somewhat recov wrap warmly and put to bed
ARSENIC: Found in rat poisons, vermin killer, Paris green, Fowler's solution. Sometimes in tinned fruits and beer.	Severe pain in stomach, purging, severe cramps in legs, vomiting, dryness of throat, cold sweats, profound shock.	Much lukewarm water. Magn in large quantity or dialyzed in ½-ounce doses, repe Beaten-up eggs or castor oil stimulants. Warmth and rub If rat poison has been taken, as for poisoning by arsenic.
LEAD: Sugar of lead, lead paint, white lead.	Throat dry, metallic taste with much thirst, colic in abdomen, cramps in legs, cold sweat; sometimes paralysis of legs and convulsions.	½ ounce Epsom salts in tumbl water. Stimulants and soo liquids.
OPIUM: Laudanum, morphine, paregoric, some soothing syrups and cough mixtures.	Drowsiness, finally unconsciousness; pulse full at first, then weak; breathing full and slow at first, gradually slower and shallow; pinhead pupils; face flushed, then purple.	May have difficulty in getting er to work; plenty of strong co Try to arouse by speaking lo and threatening, but do not haust by compelling to walk. Stimulantsandartificialrespira
PHOSPHORUS: In matches, phosphorus paste in many rat poisons and vermin killers, often with arsenic.	Severe pain in stomach, vomiting. Skin is dark and may have odor of phosphorus. Bleeding from nose, bloody purging. Convuls ons.	Epsom salts, ½ ounce in tumbl water, or magnesia. Stimul Soothing liquid best. Milk. A fats and oils.
PTOMAINE: Poisoning by decayed meat, fish, milk, or ice cream.	Nausea, vomiting, purging. Skin cold and clammy. Pulse weak. Severe pain in abdomen, cramps, great prostration and weakness. Often eruption on skin.	Purgative, castor oil or Epsom s Teaspoonful of powdered coal, and repeat.
STRYCHNINE—NUX VOMICA: Strychnine is frequently used on meat to poison animals and in some vermin killers.	Convulsions, very severe, alternating with cramps, affecting all muscles of body. Back is bowed up by spasms of muscles. Jaws are locked. Spasm of muscles is so great that it prevents breathing, so face becomes dusky.	Powdered charcoal, if possibl large quantity. Follow with other emetic. Absolute qui as not to bring on convulsio

TABLE II.—*Poisons for which an emetic should not be given first.*

POISON.	Symptoms.	Treatment.
MERCURY: Corrosive sublimate, antiseptic tablets. Other salts of mercury much less commonly used.	Corrosive sublimate is very irritating, so when taken turns mouth, lips, and tongue white. Mouth is swollen and tongue is shriveled; always metallic taste in mouth. Pain in abdomen. Nausea and vomiting mucus and blood, bloody purging, cold clammy skin, great prostration, and convulsions.	First, give white of egg or whol beaten up; flour and water, not so good. Emetics, soot liquids, and stimulants.
NITRATE OF SILVER: Lunar caustic.	Pain in mouth and stomach; mouth first colored white, then black; vomit first white then turns black.	Common salt dissolved in wate milk very frequently. Then em Afterward soothing liquids stimulants.

TABLE III.—*Poisons for which an emetic should never be given.*

POISON.	Symptoms.	Treatment.
Strong corrosive acids: 1. ACETIC. 2. HYDROCHLORIC (spirits of salt). 3. NITRIC (aqua fortis). 4. SULPHURIC (vitriol).	Very severe burning pain in mouth, throat, and stomach. Wherever acid touches skin or mucous membrane they are destroyed. Frequently vomiting and purging. More or less suffocation from swelling of throat, great prostration and shock.	An alkali to neutralize acid. M Magnesia or chalk in water, g frequently and freely. La e, w ing, baking soda, plaster, t powder, or even wood ashes all be used for alkali, or ammo a tablespoonful to 2 cups of wa but those mentioned above better as they are less irritat Afterwards, soothing liquids, n milk and egg, olive oil. Stimul are practically always required acid has entered air passage, i inhale fumes of ammonia.

TABLE III.—*Poisons for which an emetic should never be given.—Continued.*

POISON.	Symptoms.	Treatment.
...IC ACID (salts of lemon or ...rel).	Much like corrosive acids just named, but not so much burning of lips, etc.	Magnesia, chalk, and water or lime-water to neutralize acid. Then 1 ounce of castor oil and stimulants freely.
...OLIC ACID (phenol): ...ery commonly used in at-...empts at suicide.)	It is also a powerful corrosive poison which causes great pain and vomiting. Severe case: Unconsciousness very soon and early death. Usually easy to tell by odor of acid and burn, which with pure acid is white and with impure, black.	Rinse mouth with pure alcohol. If grown person, should swallow 3 or 4 tablespoonfuls of alcohol mixed with an equal quantity of water. Follow this in 5 minutes with 2 tablespoonfuls of Epsom salts dissolved in a little water. Though not so good, limewater may be used to rinse mouth, several glasses of it being swallowed; 3 or 4 raw eggs may be given or castor or sweet oil. Stimulants always, and keep warm.
...g caustic alkalies: AMMONIA: Strong ammonia, ammonia liniment, camphor li iment. LIME: Quicklime. POTASH: Caustic potash. SODA: Caustic soda.	Much like corrosive acids. Immediate severe burning, pain in mouth, throat, and stomach. Vomiting and purging. Alkali destroys tissues of mouth it has touched. Severe shock and suffocation from swelling.	An acid to neutralize alkali. Vinegar, lemon or orange juice. Tartaric or citric acid in plenty of water. Soothing liquids, stimulants. If cannot swallow, may inhale acetic acid or vinegar from a pocket handkerchief.

CAUTION: In giving any antidote do not wait for it to dissolve but stir it up in any fluid which can ...tained except oil, and give it at once.

CHRISTMAS, NEW YEARS AND THANKSGIVING.

(From the London Times.)

CHRISTMAS.

THE association with Christmas of bright sunny light, and more especially of candles and the Yule log, not with the intention of providing warmth, but for strictly ceremonial purposes, dates from remote ages. In the Roman calendar of the Julian Epoch the 25th of December was taken as the winter solstice, and since the sun began to increase in power from that day onward it was actually regarded as the sun's birthday. Now the disciples of the Persian god Mithra resembled the Zoroastrians in worshipping the sun; in fact, they regularly identified Mithra with the sun, and so his birthday, too, was naturally held to be the 25th of December.

It was not until the end of the third or the beginning of the fourth century that this date was also kept as the birthday of Christ by the Western Church. Previously to that the Western Christians had not celebrated Christ's birthday at all. The reason for making the festival of Christ's nativity coincide with that of Mithra and the sun was that it gave an opportunity of making converts; "of transferring," as Dr. Frazer says, "the devotion of the heathen from the sun to him who was called the Sun of Righteousness." The kindling of brilliant and solemn lights continued to be part of the ceremonial; Mithra no doubt feeling, like Osiris in Milton's great ode. But the Christmas festivities, besides being celebrated with lights, were from time immemorial made the occasion of rejoicings on the part of serfs, bondmen, slaves, and all others who in any sense were "in service." Good will toward men was on this occasion shown more particularly to those in a station below you, who were not only allowed but who demanded it as their traditional right to be entertained on terms of equality and even superiority to yourself. This was a survival from the old Saturnalia at which it was the custom for the distinction between master and slave to be temporarily abolished. Not only were the slaves in Roman times invited to sit at table with their masters and given full license to laugh at them and otherwise express the natural point of view of those in the servants' hall, but masters and slaves actually used to change places, the masters waiting on the slaves and not sitting down to their own dinner until the slaves had finished theirs. Besides the momentary establishment of this topsy-turvy republic, another old custom has descended from the Saturnalia to modern times in the election of a temporary King, the election being carried out by the drawing of lots. The twelfth-cake with a thimble or a three-penny piece concealed in it is a survival of this election, but the significance of the thimble or coin has nowadays been pretty generally forgotten. The lot used to be a bean; and there are many allusions both to the bean and to the King of the Bean in Ben Jonson Herrick, and other English poets, as well as in the notes of the antiquaries. The actual bean is, however, still to be met with in places on the Continent; and those of the Rajah's "Zoroastrian" English who find themselves at this season in Switzerland are quite likely, if they should penetrate into a family gathering, to be present at a "fête des rois," where the one who has found the bean in his slice of cake is crowned King and can exact implicit obedience to any decree, however grotesque, which he may choose to impose upon the others.

But not all the customs attached to the days around Christmas have come down to us from the Saturnalia. The mutual thwackings, for instance, with which young men and women used to belabor each other in certain parts of Germany and Austria are unconnected with the cult of the Roman deity. On the mornings of December 26 and 28 the young men used to beat the young women with bundles of green boughs; and as they beat them they recited verses of which the import was that the strokes were intended to be complimentary in character and beneficial in result to the health of the victims. The young women took the beating in the spirit in which it was administered and even rewarded the youths with cakes, money, and various forms of that internal fire which the Rajah's Minister had observed to be consumed in our island capital. On New Year's Day the tables were turned and the young women became the birchers, the young the birched.

Elsewhere the parents beat their children, tradition as their excuse if they needed one Holy Innocents' Day, or "Childirmas-dai," used to be called in Wicklif's time. In one t Orlagau, we are sorry to say that on the se and third days of the Christmas holidays it wa children who used to beat their parents. How this lamentable custom may have been expla away, it used to be supposed that the beatin children was meant as a gentle reminder of Murder of the Innocents. It is probable, how that this explanation is less exact than the one tained in the verses recited by the young me Germany when they beat the maidens, and the origin of the custom was really kindly and cruel in intent. For the fact that the thw ings were administered by green boughs has Dr. Frazer to explain the custom as one of t numerous instances of the transference or r n of energy, the vitality of the young branches b transferred from the branches to the person be by them. Whatever the explanation, it is to hoped that most of us will find it possible to sp our Christmas holidays without either beatin being beaten, however much "the spin of the blo engendered by it may liken us to Zoroastrian

Yule and Christmas Carols.

Every collection of carols is a record of the st gle between the pagan Yule and Christmas; also a record of the struggle between the com man and the artist. Everyone knows how pa symbolism and Christian thought are inextric mixed in the words, and how Christianity, b unable to extinguish the traditions of the past, ap priated them to its own ends—

> The holly bears a berry
> As red as any blood,
> And Mary bore sweet Jesus Christ
> To do poor sinners good

is among the most popular of Christian carols to- but it was first found printed in a broadside of early 18th century and is the descendant of a n ber of carols which celebrate the pagan cont between holly and ivy. Equally, carol m represents a persistent effort to civilize the melodies of the folksingers. From mediaeval ti onward to the latest publications one sees the p ess going on—the process of elaborating or po ing melodies, of adding harmonies, of approxir ing the carol to other forms of art by the introd tion of new technical devices. It can be seen comparing the early Tudor carols of William Corn with the late Tudor ones of William Byrd. A c tury divides them; the one writes for three vo in the manner of the church motet, the other wr for six in the manner of the madrigal or for voice, with a contrapuntal accompaniment viols. Alike, they serve to show the popular mu making of Christmas being turned to higher arti uses for the benefit of those who wanted someth more than the rough tune and the garbled v for the expression of their feelings of gladness the festival.

The fact seems to be that throughout Christend the carol has been the greatest means of enab people of all kinds and tastes to make the m they like best in the way they like best. It is c to see why it should have been especially associa with Christmas, for with its combined spirit and secular associations Christmas supplied widest possible subject-matter for such music-m ing. Even leaving on one side the Yuletide festi with its pagan symbolism and its grosser conco tants of excessive eating and drinking (and the c est carol on record is a drinking song of a parti larly thoroughgoing kind), Christmas offered opportunity for a wealth of human sentiment s rounding the central religious idea. It is nc worthy that in England the carol decayed wh the writers of its verse began to indulge in d

nal dissertations on the fall of man and the scheme his salvation. It was the love for the Virgin other and Child, the glamour of the angelic hymn, e poetry of the star in the East which raised the ol to its point of highest ecstasy.

The carol never belonged to the Church, though used just so much of both the language and the sic of the Church as it needed. To-day we are much inclined to think of carols as a species Church music; and, sung by nicely-balanced hedral and church choirs, the words and music refully chosen and arranged to suit the decorous nosphere of a Church service, their vigorous ing rhythms and even passionate enthusiasms apt to be forgotten.

New Year's a Secular Holiday.

There can be no doubt that New Year's Day is entially a secular holiday, though it is the "octave" Christ's birthday and is bright with light re- ted or deflected from that festival of men and gels. But it falls outside the nine shortest days the pagan year, and there is really no evidence believing that our unredeemed ancestors, whether xons or Celts, regarded it as an occasion for cere- nial usages. But in Rome and wherever a man uld say *Civis Romanus sum* (which meant that was a Roman in the eyes of the law, not in the litical sense) New Year's Day was a time for the ing of gifts; and this ancient custom has been ot up not only in France and all other Latin untries, but also in many lands which were in, her than of, the Roman Empire. The custom ist have been introduced into these islands by Romans who sojourned there and the native nilies connected with them. In particular, fol- ing the Roman usage, which required the client render some tangible compliment to his patron, esents were made to personages in authority by persons within their danger during the Middle es; and, as might naturally have been expected, se free offerings soon assumed the aspect of a customary tribute, a tax, or a bribe, according to he views of the more or less unwilling giver.

In later centuries, in the days when Sir Thomas More was Lord Chancellor, for example, the form of this tribute was conventionalized. Generally speaking, it was a pair of gloves with a "lining" of gold pieces, the golden tax or bribe being concealed so that the recipient's finer feelings might not be jarred, in a kind of palpable legal fiction. The great personage thanked his humble friend for a pair of warm, well-lined gloves, and his secretary noted the value of the currency contained for future reference. There was no law against secret commissions in the good old days when Bacon took gifts from suitors, but refrained from dropping them into the scales held aloof by the effigy of Justice. Alternately the Church banned and blessed the custom complimenting magistrates. But it was not until the State stepped in, seeing that a portentous leakage of revenue was involved, that this good old custom fell into abeyance—to reappear in the relations of tradesmen with their customers. In the 18th century, and in the early decades of the 19th, chandlers presented their customers with large mould candles; grocers gave raisins or a pack of cards to keep their patrons (they were the clients of course) out of bed and increase their consumption of coffee; and other tradesmen were not less complaisant in rendering the "compliments of the season." The phrase has long since lost its concrete significance.

On the other hand, the dispensers of small personal services, regarding the public as their clients, turned the custom to their own advantage. In barbers' shops, for example, the "thriftbox" was hung up on the wall by the apprentice boys, and the customer who did not wish to have the lather-brush thrust into his mouth (what time he opened it to talk politics with the barber) dropped in his mite ostentatiously. The barber himself was content, as the nursery rhyme reminds us, with a pinch of snuff out of his client's sneezing mill.

THANKSGIVING DAY.

The first Thanksgiving Day in America was ebrated by the little band of Plymouth Colon- s in 1621, though they had little to be thankful except that they were alive. One of the reasons y they were alive was that among the food re- irces of the new land, "besides water foule there s a great store of wild Turkies"; and it shows w well known the bird must already have been Europe that Bradford should thus have identi- l it offhand and assumed that the name needed explanation. And we know that the festivities the very earliest Thanksgivings centred largely the consumption of "fowles":—

"Our harvest being gotten in, our Governor sent r men on fowling, that we might after a more ecial manner rejoice together, after we had gath- d the fruits of our labours. They foure in one day led as much fowle, as, with a little help beside, ved the company almost a week."

This earliest festival of the Colonists was a mere lliday after the toil of the harvest, a "frolic" ch as may still be seen in many parts of England, h little or no religious associations or obser- nces. It was a time of dancing and feasting, rts and trials of strength and skill, of rest and laxation after the labors of the year. Merry- kings at harvest-home were prevalent in Eng- d, we know, in, at least, the 16th century; and e Pilgrims did but reproduce, in this as in most her things, the institutions with which they had en familiar at home. As the plantations in rth America prospered, the custom persisted d spread and, under Puritan influence, it came assume throughout New England a more religious aracter. Still a season of rejoicing, it had for its itral episode the gathering at the place of wor- p to listen to the Thanksgiving Sermon, more ular than other sermons of the year, in which the lities and material topics of the day could be dis- ssed from the pulpit more freely than on ordin- Sundays. In this form it spread from New Eng- d over the country, first through the Middle ates, and so to the further West, finally and more wly through the South, until Thanksgiving came be the most popular and universally observed all the national holidays hardly excepting the re ebullient and demonstrative Fourth of July. Its associations with the carrying of the harvest came, with the growth of industrial prosperity and the emergence of large cities, to be partially obscured. Above all, it grew to be recognized as a family festival, a day of reunions in the old homestead and for the renewing of old affections, a season of charity and mutual helpfulness.

First Thanksgiving Proclamation.

In 1789, in response to requests from both Houses of Congress, George Washington issued the first Thanksgiving Proclamation, appointing Thursday, November 26, as a day to be set aside for "acknowledging with grateful hearts the many and signal favours of Almighty God, especially by affording them (the people) an opportunity peaceably to establish a form of government for their safety and happiness," and, in particular, for "the favorable interpositions of His providence in the course and conclusion of the late war." Six years later, February 19,1795, was similarly appointed a day of thanksgiving for the "divine beneficence" as shown especially in the suppression of the recent insurrection (the Whisky Rebellion) and for the continued stability of those "constitutions of government which unite and by their union establish liberty and order."

In 1798 the relations of the new Republic with Great Britain were again strained almost to the breaking point, and President Adams proclaimed Wednesday, May 9, as a day of humiliation and fasting inasmuch as the United States was placed "in a hazardous and afflictive situation by the unfriendly disposition, conduct, and demands of a foreign Power," but with the prayers and supplications were to be mingled thanks for many blessings, including "a wonderful increase in population." In the following year, the situation being still acute, Thursday, April 25, was similarly dedicated to "humiliation, fasting, and prayer", in that "the most precious interests of the people of the United States are still held in jeopardy by the hostile designs and insidious acts of a foreign nation." Once more thanks were also to be rendered for many blessings, especial reference being made to "the labor of the husbandmen so that there may be food in abundance for man and beast."

PEAT FUEL BOGS IN NEW YORK STATE AND THE UNITED STATES

(By the American Museum of Natural History, N. Y.)

THOUGH most New Yorkers are ignorant of the fact, there is a large deposit of good peat within city limits which might be used locally as fuel. This bog—probably the world's most accessible supply, since there are several million people living within twenty-five miles of it—is known as Jun Swamp, and is located in the western part of Long Island, in the Borough of Queens, between Mast and Middle Village. The bog covers an area of about one hundred acres and the peat bed is from te fifteen feet thick. The peat is reddish brown, pretty thoroughly decomposed a few feet below the face, and seems to be of excellent quality. It constitutes 42,000,000 cubic feet of easily accessible terial which merely needs cutting out and drying to provide good fuel for thousands of families. I is disintegrated and partially decomposed vegetable matter—vegetable mud. It collects in and fills swamps under favorable conditions. Vast deposits of it are known in temperate and cold climates is not found in warm localities, for there the decay of vegetable matter is too rapid. The formatio peat illustrates the conditions under which coal originates. The rate of growth of a peat bog is often f one to four inches a year, the depth varying from ten to twenty feet. When dried in the open air forms a valuable domestic fuel, and its value is greatly enhanced by compression into small blocks or quettes, whether alone or in mixture with coal dust. In times and countries where the forests could supply sufficient fuel, men have turned to peat to take the place of wood for burning. Its greatest portance seems to have been in the eighteenth century, when the forests of Northern Europe had beer a great extent cleared away and the use of coal had not yet become general, as it was later to be when tr portation facilities were to make distribution practical. At that time peat was used for household purp by the rural populations of Northern Germany, Scandinavia, Russia, France and the British Isles. Ireland particularly peat was and still continues to be a much relied-on natural resource.

Peat was burned to some extent in the United States during Colonial times and even later, until progressive cheapness of anthracite coal led to the abandonment of local fuel. But the present gen tion of Americans does not know the extent of the peat deposits in this country or their value. It been estimated that there are 15,000,000,000 cubic feet of peat in Massachusetts alone, while the G Dismal Swamp of Virginia and North Carolina, forty miles long by twenty-five miles wide, is practic an inexhaustible storehouse of the material. Peat is found along the coast of New Jersey and south al the Atlantic Coast to the central parts of Florida, and along the Mississippi and other rivers with w developed inundation plains. There are also deposits west of the Mississippi, but these become more more scanty as one journeys westward, and are of little economic value. By far the richest deposit this country lie in New England, east of the Berkshire Hills and Green Mountains.

RADIO-ACTIVITY IN MINERALS.

(By Chief Chemist R. B. Moore, U. S. Bureau of Mines.)

PROBABLY no other metal excites as much interest among both scientific men and the general public adium. This is due partly to the high cost of radium salts and partly to the peculiar properties of the ient. "Radio-activity" was discovered, largely by accident, by Henri Becquerel, the French scien- in 1896.

Certain substances are "phosphorescent," and have the property of absorbing light when exposed unlight and glowing or giving out the light afterward when examined in the dark. The material cal- n sulphide does this, and has been in past years used for making temporarily luminous paint. Cer- salts of the rare metal uranium are phosphorescent. A considerable amount of uranium was used in manufacture of the greenish-yellow fluorescent champagne glasses which were so popular several years ago. Becquerel in 1896 was interested in experimenting with certain of these phosphorescent substances rder to find, if possible, a connection between phosphorescence and the recently discovered X-rays, ch were exciting considerable attention at that time. Among other substances he used some salts of ium. His custom was to expose the phosphorescent substance to the action of sunlight and then ster the effect of possible penetrating radiation on a photographic plate protected from ordinary light. querel's experiments gave positive results at once, and he at first believed that he had discovered a rela- between phosphorescence and X-rays.

Later he exposed to a uranium salt a plate which had not been previously exposed to sunlight. To surprise, on developing this plate he found that he had obtained the same effect as he had previously und when the uranium salt had been exposed to sunlight. The pursuit of this partly accidental dis- ery has given us the whole science of radio-activity. It was found that uranium and its salts had the perty of ionizing gases, or converting the molecules of gases into charged particles. It is this property ch is used almost exclusively in identifying radio-active substances and in making quantitative deter- ations.

Mme. Curie, wife of the professor of physics in the Sorbonne, in Paris, became interested in the work Becquerel and examined all the known elements to see whether any of them possessed properties simi- r to those of uranium. She found that thorium and its salts would also affect a photographic plate with- previous exposure to sunlight and would also ionize gases. Thorium, as well as uranium, is, therefore, o-active.

MME. CURIE'S RESEARCH.

Mme. Curie went further. She found that a given weight of uranium metal had the same amount of o-activity associated with it no matter what chemical form of combination it was in. The other ele- nts with which it was combined did not affect the activity in any way. From this evidence she made statement which has since been found to be perfectly true, that radio-activity is an atomic property s dependent upon the individual radio-active element, and is not affected by ordinary chemical combi- ons or reactions. She then made a study of radio-active minerals, paying especial attention to the eral pitchblende, which is a natural uranium oxide containing traces of lead, arsenic, and other im- ities. This was furnished her by the Austrian Government from its mines at St. Joachimsthal.

To her surprise, she found that a piece of pitchblende carrying a given weight of uranium had approxi- ely four times greater activity than any pure uranium salt containing the same amount of uranium. s indicated that either her original conclusion, that radio-activity is an atomic property, was wrong hat pitchblende contained another element or elements which were also radio-active. She proceeded est these conclusions and was assisted by the Austrian Government, which sent her a considerable amount itchblende for this purpose. She separated the different elements, and as each element was separated tested it to see how radio-active it was.

There is one group of metals, consisting of calcium, strontium, and barium, which have properties very ilar to one another. Ordinary lime is an oxide of calcium and both strontium and barium minerals are onably common in nature. Mme. Curie found that the larger part of the activity in the pitchblende centrated with the calcium, strontium, and barium. She was ultimately able to separate a small quan- of new material which had properties in many ways similar to barium but was strongly radio-active. s new element she called radium. Later Mme. Curie discovered another radio-active element, which also in pitchblende, which she called, after her native state, "polonium." In separating the constitu- s in pitchblende this element always concentrates with the copper group and is closely allied in its chemi- properties to bismuth.

Radio-active substances affect a photographic plate and ionize gases. This is due to the fact that ium and its salts have three types of rays, called alpha, beta, and gamma. The alpha rays travel with elocity of between 8,000 and 12,000 miles per second, and are positively charged. Sir Ernest Ruther- l, the great English physicist, found quite early that the mass of the alpha particle was comparable to t of a helium atom. The fact that the alpha particle actually is a helium atom was later proved by Sir liam Ramsey, who dissolved some radium chloride in water and allowed the occluded gases to run into pectrum tube. When these gases stood for a few days the spectrum of helium gradually appeared.

When an X-ray tube is operated, a stream of tiny particles with a mass about 1-1600th of a hydrogen n are thrown off from the negative pole and go to the positive pole. These are called electrons, and negatively charged particles of matter. They have a velocity of from 100,000 miles a second up to ut 98½ per cent. of the velocity of light, which is 186,000 miles per second. Some of these tiny par- s move with less velocity than indicated above, but the majority of them have the extreme high veloc- mentioned. Both of these rays, therefore, consist of actual matter, one, the alpha particle, being atomic nass, and the other very much smaller. The alpha particle does not penetrate matter very readily and topped by a sheet of ordinary paper. In air it travels anywhere from one to three inches at ordinary sure, ultimately being stopped by impact with the molecules of oxygen and nitrogen of the air.

The beta particles are much more penetrating and will pass through a thin piece of glass or through eral sheets of paper superimposed. The average penetration in air is about two feet. The beta rays always accompanied by gamma rays. The latter are vibrations in the "ether" very similar to, if not iden- l with, X-rays or, as they are sometimes called, "Roentgen" rays. The gamma rays, therefore, do not sist of actual matter flying with high velocity, but are vibrations very similar to light vibrations, but ery much shorter wave length.

The main difference between the gamma rays and X-rays is that the gamma rays have a considerably ter wave length than the X-rays, and are therefore much more penetrating. Some of the shorter gam- rays have been shown to penetrate nearly a foot of iron. Absorption of any of these rays by matter is endent upon not only the velocity of the rays, but also on the density of the particular type of matter l for absorption. For example, a sheet of lead will absorb the rays more readily than a sheet of alu- um of the same thickness, and the efficiency of absorption, or the "stopping power" of the metal, is pro- ionate to the density. Therefore, any substance is radio-active which gives off either alpha, beta, or ma rays, or all of these.

SUCCESSIVE ATOMIC CHANGES.

The elimination of these rays is due to an actual atomic change in the atoms involved. For example n a certain radio-active atom eliminates an alpha particle it permanently loses the alpha particle, and residue of the original atom which is left behind is now a new element with properties entirely different n the original element. This second atom may also be radio-active, and may lose either an alpha or a

ATOMIC CHANGES IN MINERALS—*Continued.*

beta particle, and become another element with still different properties. This may go on through a se of changes until some atom is finally reached which is stable and does not change further.

That actually occurs in connection with radio-active elements, such as uranium and thorium. metal uranium is the mother of radium, as radium is actually formed by the disintegration of uranium uranium minerals. In order to change into radium the uranium goes through a series of five changes bei radium is actually reached in the series. Radium then goes through a series of nine changes, each cha giving a new element, until a stable element is reached which does not change further. This stable elem is lead, which is the final product of the change of the radio-active elements which start with uranium

The element thorium goes through a somewhat similar series of changes, ten changes being requi before a final, stable, end product is reached, which also is lead.

Whereas radium was discovered in France, and the early sources of supply of radium were in Aus and Cornwall, England, this country now produces most of the radium used in the world. Product began about seven years ago. In 1920 the U. S. production was over 34 grams,

RADIUM.

Radium (from Lat. radius, ray), a metallic chemical element obtained from pitchblende, a urani mineral, by P. and Mme. Curie and G. Bernont in 1898; it was so named on account of the intensity of radio-active emanations which it yielded. Its discovery was a sequel to H. Becquerel's observatior 1896 that certain uranium preparations emitted a radiation resembling the X-rays observed by Roent in 1895. Like the X-rays, the Becquerel rays are invisible; they both traverse thin sheets of gas or me and cannot be refracted; moreover, they both ionize gases, *t. e.* they discharge a charged electroscope, latter, however, much more feebly than the former. Characteristic, also, is their action on a photograj plate, and the phosphorescence which they occasion when they impinge on zinc sulphide and some ot salts. Notwithstanding these resemblances, these two sets of rays are not identical. Mme. Curie, regs ing radio-activity—*t. e.* the emission of rays like those just mentioned—as a property of some undiscove substance, submitted pitchblende to a most careful analysis. After removing the uranium it was fo that the bismuth separated with a very active substance—polonium; this element was afterward isola by Marckwald, and proved to be identical with his radiotellurium; that the barium could be separated w another active substance—radium; whilst a third fraction, composed mainly of the rare earths (thori &c.), yielded to Debierne another radio-active element—actinium, which proved to be identical with emanium of Giesel. Another radio-active substance—ionium—was isolated from carnotite, a urani mineral, by B. B. Boltwood in 1905. Radio-active properties have also been ascribed to other eleme *e. g.* thorium and lead. There is more radium than any other radio-active element, but its excessive ra may be gauged by the facts that Mme. Curie obtained only a fraction of a gramme of the chloride and Gi .2 to .3 gramme of the bromide from a ton of uranium residues.

There is a mass of evidence to show that radium is to be regarded as an element, and in general its pi erties resemble those of the metals of the alkaline earths, more particularly barium. To the Bunsen fla a radium salt imparts an intense carmine-red color (barium gives a green). The spectrum, also, is v characteristic. The atomic weight, 226.4, places the element in a vacant position in group II. of the perio classification along with the alkaline earth metals.

THREE TYPES OF RAYS.

Generally speaking, the radiation is not simple. Radium itself emits three types of rays: (1) the al rays, which are regarded as positively charged helium atoms; these rays are stopped by a single shee paper; (2) the beta rays, which are identified with the cathode rays *t. e.* as a single electron charged ne tively; these rays can penetrate sheets of aluminum, glass, &c., several millimetres thick; and (3) the gan rays, which are non-electrified radiations characterized by a high penetrating power, 1% surviving a traversing 7 cm. of lead or 150 cm. of water. In addition, radium evolves an "emanation" which is extraordinarily inert gas, recalling the "inactive" gases of the atmosphere. We thus see that radiun continually losing matter and energy as electricity; it is also losing energy as heat, for, as was observed Curie and Laborde, the temperature of a radium salt is always a degree or two above that of the atn phere, and they estimated that a gramme of pure radium would emit about 100 gramme-calories per ho

The Becquerel rays have a marked chemical action on certain substances. The Curies showed t oxygen was convertible into ozone, and Sudborough that yellow phosphorus gave the red modificat when submitted to their influence. More interesting are the observations of D. Berthelot, F. Bordas, Doelter and others, that the rays induce important changes in the colors of many minerals.

The action of radium on human tissues was unknown until 1901, when Professor Becquerel of Pa having incautiously carried a tube in his waistcoat pocket, there appeared on the skin within fourteen d a severe inflammation, which was known as the famous "Becquerel burn." Since that time active investi tion into the action of radium on diseased tissues has been carried on resulting in the establishment in P in 1906 of the "Laboratoire Biologique du Radium." Similar centres for study have been inaugura in other countries, notably one in London in 1909. The diseases to which the application has been hithe confined are papillomata, lupus vulgaris, epithelial tumors, syphilitic ulcers, pigmentary naevi, angiom and pruritus and chronic itching of the skin; but the use of radium in therapeutics is still experimen The different varieties of rays used are controlled by the intervention of screens or filtering substances si as silver, lead and aluminum. Radium is analgesic and bactericidal in its action.

RADIUM COSTLIEST OF EARTH PRODUCTS.

The value of a metric carat of radium is $20,000, a gram of this substance being worth $100,000

VOLCANIC DUST ENCIRCLES THE GLOBE.

The winds of the upper altitudes, in addition to keeping the atmosphere stirred up, affect weather another way under exceptional conditions. When volcanoes throw dust and ashes into the upper air—son times fifteen or twenty miles up—the planetary winds quickly spread the particles, forming an envelc entirely enclosing the globe. This sheath screens off many of the short heat waves coming from the s but does not interfere materially with the passage outward of the longer heat waves radiated by the ear The earth therefore loses heat in two ways, and as a result the average temperature all over the world lowered for some time after the more violent volcanic eruptions.

MINERAL PRODUCTS—STATES THEY COME FROM.

Mineral.	Chief Producing States.
Aluminum	N. Y., Tenn., N. C.
Antimonial lead	Not separable by States.
Antimony ore	Nev., Alas., Utah, Idaho.
Arsenious oxide	Not separable by States.
Asbestos	Ariz., Ga., Cal., Wyo.
Asphalt	Tex., Cal., Okla., Ill.
Barytes (crude)	Ga., Mo., Tenn., Ky.
Bauxite	Ark., Ga., Ala., Tenn.
Borax (crude)	Cal.
Bromine	Mich., Ohio, Wash., Pa.
Cadmium	Not separable by States.
Calcium-magnes. chloride	Mich., Ohio, W. Va., Cal.
Cement	Penn., Ind., Mo., Cal.
Chromic iron ore	Cal., Ore., Md., Wash.
Clay: Products	Ohio, Penn., N. J., Ill.
Raw	Mo., Penn., N. J., Ill.
Coal: Bituminous	Penn., W. Va., Ill., Ohio.
Anthracite	Penn.
Coke	Penn., Ala., Ohio, Ind.
Copper	Ariz., Mont., Mich., Utah.
Diatomaceous (infusorial) earth and tripoli	Cal., Penn., Ill., Wash.
Emery and corundum	N. Y., N. C., Va.
Feldspar	Me., N. C., Penn., Conn.
Ferroalloys	Penn., Ill., Md., Ala.
Fluorspar	Ill., Ky., Colo., N. H.
Fuller's earth	Fla., Ga., Tex., Ark.
Garnet, for abras. purposes	N. Y., N. H., N. C.
Gems and precious stones	Mont., Nev., Cal., Me.
Gold	Cal., Colo., Alas., S. Dak.
Graphite	Ala., N. Y., Penn., R. I.
Grindstones-pulpstones	Ohio, W. Va., Mich.
Gypsum	N. Y., Ia., Mich., Ohio.
Iron: Ore	Minn., Mich., Ala., N. Y.
Pig	Penn., Ohio, Ill., Ala.
Lead	Mo., Idaho, Utah, Colo.
Lime	Penn., Ohio, Va., Mo.
Magnesite (crude)	Cal., Wash.
Manganese ore	Mont., Va., Ariz., A
Mica	N. C., N. H., Va., G
Millstones	N. Y., Va., N. C., P
Mineral paints: Nat. pig.	Canvass discontinue
Zinc and lead pigments	Penn., Wis., Kan., M
Mineral waters	Wis., N. Y., Cal., M
Natural gas	W. Va., Penn., Ohio,
Natural-gas gasoline	Okla., W. Va., Cal.,
Nickel	Not separable by St
Oilstones, etc.	Ala., Ind., Ohio, Vt.
Peat	N. J., Ill., Cal., Mas
Petroleum	Okla., Cal., Kan., T
Phosphate rock	Fla., Tenn., S. C., W
Platinum and allied metals	Nev., Cal., Wyo., O
Potash	Neb., Cal., Utah., M
Pumice	Kan., Neb., Cal.
Pyrite	Va., N. Y., Cal., Ga
Quicksilver	Cal., Tex., Nev., Or
Salt	Mich., N. Y., Ohio,
Sand and gravel	Penn., Ohio, Ill., N.
Sand-lime brick	Mich., Minn., N. Y.,
Silica (quartz)	Mass., Penn., Wis.,
Silver	Utah, Mont., Idaho.
Slate	Penn., Vt., Me., Va.
Stone	Penn., Ohio, Vt., N.
Sulphur	La., Tex., Wyo., Nev
Sulph. acid fr. copper and zinc sm.	Penn., Ill., Ohio, Te
Talc and soapstone	N. Y., Vt., Va., Ga.
Thorium miner. (monazite)	N. C.
Tin	Alaska, S. Dak.
Titanium ore (rutile)	Va.
Tungsten ore	Cal., Colo., S. Dak.,
Uranium-vanadium mins.	Colo., Utah.
Zinc	N. J., Mo., Mont., O

MINERAL PRODUCING STATES AND THEIR LEADING MINERAL PRODUCTS.

State.	Principal mineral products.
Ala	Coal, iron ore, clay prod., stone.
Alas	Copper, gold, silver, coal.
Ariz	Copper, silver, gold, zinc.
Ark	Coal, bauxite, zinc, clay prod.
Cal	Petrol., gold, copper, cement.
Colo	Coal, gold, zinc, silver.
Conn	Clay prod., stone, lime, sand, gravel.
Del	Stone, clay prod., sand, gravel, min. wat.
D. of C.	Clay prod. sand-lime brick, stone, min. wat.
Fla	Phosph. rock, stone, fuller's earth, clay prod.
Ga	Clay prod., stone, barytes, cement.
Idaho	Lead, silver, zinc, copper.
Ill	Coal, petrol., clay prod., cement.
Ind	Coal, cement, clay prod., stone.
Iowa	Coal, clay prod., cement, gypsum.
Kan	Petrol. coal, nat. gas, cement.
Ky	Coal, petrol., clay prod., stone.
La	Petrol. sulphur, nat. gas, nat.-gas gasol.
Me	Stone, lime, clay prod., min. wat.
Md	Coal, clay prod., cement, stone.
Mass	Stone, clay prod., lime, sand, gravel.
Mich	Copper, iron ore, salt, cement.
Minn	Iron ore, clay prod., cement, manganif. ore.
Miss	Clay prod., sand, gravel, min. wat., stone.
Mo	Lead, zinc, coal, clay prod.
Mont	Copper, zinc, silver, coal.
Nebr	Potash, clay prod., stone, sand, gravel
Nev	Copper, silver, gold, lead.
N. H	Stone, clay prod., mica, sand, gravel.
N. J	Zinc, clay prod., cement, iron ore.
N. M	Copper, coal, zinc, silver.
N. Y	Clay prod., iron ore, cement, stone.
N. C	Stone, clay prod., mica, iron ore.
N. D	Coal, clay prod., min. wat., sand-lime
Ohio	Coal, clay prod., petrol., nat. gas.
Okla	Petrol., nat.-gas gasol., zinc, nat. gas.
Ore	Gold, copper, stone, clay prod.
Penn	Coal, clay prod., cement, nat. gas.
R. I	Stone, clay prod., graphite, min. wat
S. C	Clay prod., stone, phosph. rock, min.
S. D	Gold, tungsten ore, stone, silver.
Tenn	Coal, zinc, copper, cement.
Tex	Petrol. sulphur, coal, cement.
Utah	Copper, lead, silver, coal.
Vt	Stone, slate, talc, soapstone, lime.
Va	Coal, lime, clay prod., stone.
Wash	Coal, cement, clay prod., lead.
W. Va	Coal, nat. gas, petrol. clay prod.
Wis	Zinc, iron ore, stone, zinc and lead pi
Wyo	Coal, petrol., iron ore, copper.

Some of the 1920 figures are subject to final revision.

The canvass of sulphuric acid was discontinued in 1917, when the quantity was 1,455,257 short tons luding 119,048 tons of stronger acid), and the value was $16,890,545.

Values of antimony, iron ore and raw clay are not included in the totals.

Estimates of the value of hard and soft coal are included in the totals: coke is not so included.

The "minette" ore field which extends over a portion of Alsace-Lorraine, Luxemburg, and Belg is the most important as regards quantity in Europe. This field in 1912 produced 44,000,000 tons, o per cent. of the world's output. The ore—geologically a bedded oolitic ironstone of Jurassic age—is a bonate partly oxidized to brown ore.

PIG IRON MANUFACTURED IN PRINCIPAL COUNTRIES IN GROSS TONS.

France's production of pig iron in 1920 was 3,317,371 metric tons.

IRON ORE RESOURCES OF THE WORLD.

The unmined iron ores of the world are officially estimated as follows, in metric (2,204.6 lbs.) tons:

COUNTRIES.	Iron Ore.	Iron.	COUNTRIES.	Iron Ore.	Iron.
Europe:	*Metric tons.*	*Metric tons.*	Europe—continued.	*Metric tons.*	*Metric to*
Germany.....	1,270,000,000	600,000,000	Luxemburg.....	270,000,000	90,000
France.....	5,630,000	3,000,000,000	Greece.....	100,000,000	45,000
England.....	1,300,000,000	455,000,000	Other European countries.....	77,000,000	30,000
Sweden.....	1,158,000,000	740,000,000			
Russia.....	865,000,000	387,000,000	Total Europe.....	12,000,000,000	6,528,000
Spain.....	711,000,000	349,000,000	America.....	9,855,000,000	5,154,000
Norway.....	367,000,000	124,000,000	Africa.....	125,000,000	75,000
Austria-Hungary....	284,000,000	103,000,000	Asia.....	260,000,000	156,000
			Australia.....	136,000,000	74,000

The French figures for ore include 150,000,000 tons in Algeria and Tunis.

Rolled blooms and billets for forging purposes are included from 1905, while semi-finished products
l for export are included for 1912 and subsequent years. Prior to 1892 structural shapes were included
ll other finished rolled products."

Two-thirds of the rails produced now weigh 85 pounds or over a yard, and one-quarter of the rails
1 100 pounds or over a yard. Four-fifths of the rails are by open-hearth process. Girder and high
ls for electric and street railways are included in the figures given above. No iron rails have been
ıced since 1911. Included in above rail totals are re-rolled rails, amounting in 1919 to 104,121 tons.
ıe 22 rail mills, 9 are in Pennsylvania, 3 in Alabama; 1 in Maryland; 2 each in Ohio and Illinois, and 1
in New York, West Virginia, Indiana, Wisconsin, and Colorado. Production of rails in Pennsylvania
920 was 748,196 tons.

COAL RESERVES OF THE WORLD UNMINED.

United States and Alaska, 3,538,506,328,300 tons, of which 16,153,000,000 tons is anthracite, 2,155,-
·00,000 tons is bituminous, and 2,054,000,000,000 tons is sub-bituminous and lignite; Canada, 1,361,-
·00,000 tons, of which 2,000,000,000 is anthracite and 313,000,000,000 is bituminous; China, 1,097,-
·00,000 tons, of which 427,000,000,000 is anthracite; Germany, 467,000,000,000 tons, of which
·00,000,000 tons is bituminous and the rest sub-bituminous; Great Britain, 209,000,000,000 tons, of
ı 12,000,000,000 is anthracite; Siberia, 192,000,000,000 tons, no anthracite; Australia, 183,000,000,000
all bituminous or sub-bituminous; India, 87,000,000,000 tons, no anthracite; Russia in Europe, 66,000,-
·00 tons, of which 41,000,000 is anthracite; Union of South Africa, 62,000,000,000 tons, of which
·0,000,000 is anthracite; Austria, 59,000,000,000 tons, no anthracite; Colombia, 30,000,000,000 tons,
ıthracite; Indo-China, 22,000,000,000 tons, all anthracite; France 19,000,000,000 tons, of which 4,000,-
·00 is anthracite; Belgium, 12,000,000,000 tons, no anthracite; Spain, 10,000,000,000 tons, of which
·,000,000 is anthracite; Spitzbergen, 9,000,000,000 tons, no anthracite; Japan, 9,000,000,000 tons, no
racite; Holland, 5,000,000,000 tons, no anthracite; other countries, 24,000,000,000 tons, of which 3,000,-
·00 is anthracite.

Total coal reserves, 7,460,506,000,000 tons, of which 542,103,000,000 is anthracite.

Coal unmined in Pennsylvania is estimated at 16,000,000,000 tons anthracite, and 108,474,000,000 bituminous; in West Virginia, 150,363,600,000 tons, bituminous.

COAL OUTPUT OF THE WORLD.

The yearly coal production of the world is estimated at slightly under 1,500,000,000 short tons, of which 550,000,000 to 650,000,000 tons is mined in the United States; 325,000,000 in Great Britain; 300,-·00 in old Germany; 66,000,000 in old Austria-Hungary; 50,000,000 in old France; 40,000,000 in old ia; 25,000,000 in Belgium; 30,000,000 in Japan; 20,000,000 in China; 20,000,000 in India; 15,000,000 nada; 12,000,000 in New South Wales; 7,000,000 in Spain; 10,000,000 in Union of South Africa; 2,500,-n New Zealand; and smaller amounts in Holland, Chile, Mexico, Turkey, Italy, Sweden, Serbia, Bul-, Peru, and other countries.

RETAIL PRICE OF ANTHRACITE COAL AT NEW YORK CITY.

The figures are for January in each year, and represent the price per ton of 2,000 pounds, stove size: 3) $7.07; (1914) $6.86; (1915) $7.14; (1916) $7.11; (1917) $8.50; (1918) $9.06; (1919) $10.76; (1920) 4; (1921) $14.54.

COAL MINERS—THEIR AVERAGE NUMBER.

The number of men employed in the Pennsylvania anthracite mines ranged as high as 180,000 in 1914, as low as 154,000 in 1917. They average 200 (1908) to 293 (1918) days' work a year, and they dig 2.02 1) to 2.39 (1908) tons per man per day.

In the bituminous mines the number of employees ranged up to 615,305 in 1918, with 243 days' work ear, and an average digging of 3.91 (1915) tons per man per day.

Petroleum imports 1895-1906 are for fiscal years.

In the calendar year 1918 the railroads consumed 162,591,532 tons of bituminous coal; ocean s ships (other than army and navy transports) burned 6,189,316 tons; the mines used 12,521,446 to steam and heat; beehive coke ovens took 48,160,297 tons; by-product coke plants used 36,867,721 coal gas plants burned 4,965,832 tons; and domestic industrial and electric utilities consumed 283,3: tons. New York State used within its borders 20 467,028 tons, not including the soft coal used by roads and steamships. Of the total bituminous production, 36.1 per cent. was consumed in the States produced. The amount handled at the Port of New York was 17,202,735 short tons.

FAST ATLANTIC OCEAN PASSAGES.

Sailing Ships—Columbus, in 1492, sailed from Spain (Palos) to the Gulf of Mexico in thirty-seven d
The American-built clipper the Lightning, of the Black Ball (British) Australian Line, on Marc
1854, sailed 436 nautical miles, on way from Boston to Liverpool, on her maiden voyage. A gale was bl
ing and the ship's log showed a speed as nigh as 18½ miles an hour. The same vessel, on March 19, 1
sailed 430 nautical miles, on way from Liverpool to Melbourne, Australia. The clipper Donald Mck
Black Ball Line, on Feb. 27, 1855, sailed 421 nautical miles on maiden voyage from Boston to Liverpool
The fastest day's record of a sailing ship on any sea—437 miles— was made by the Sovereign of the S
on a passage from New York to San Francisco. The Flying Cloud made 433½ miles in one day, New Y
to San Francisco.
The quickest passage of a clipper ship across the Atlantic was made, it is asserted in maritime cir
by the Dreadnaught, which cleared from New York on June 15, 1859, and arrived off Cape Clear, Irel
on June 27—12 days. The clipper Red Jacket, built at Rockland, Me., sailed from Sandy Hook, N.
to Liverpool in 13 days, 1 hour, 25 minutes. The Dreadnaught once went from New York to Liverpoo
13 days, 8 hours. She was built in 1853 at Newburyport, Mass. She was 217 feet long, 40 feet wide
feet deep, 1,443 gross tons. She was lost, July 4, 1869, on Cape Penas, northeast of Terra del Fuego, Sc
America, on the way from Liverpool to San Francisco.
The sailing ship Northern Light went from San Francisco to Boston, via Cape Horn, in 76 days
8 hours. The Andrew Jackson sailed from New York to San Francisco in 80 days and 4 hours. The Dr
naught went from Honolulu to New Bedford, Mass., 13,470 miles, in 82 days. The Sovereign of the S
sailed from Honolulu to New York in 88 days. The Natchez sailed from Canton, China, to New Yor
76 days. The Trade Wind, in 1853, sailed from San Francisco to New York in 75 days. The Lightn
in 1854, sailed from Australia to Liverpool in 64 days. The bark Dawn of New York sailed from Bue
Aires to New York in 36 days. The Nabob, of Boston, went from New York to Rangoon (Burmah), In
in 75 days. The Flying Dutchman in 1852-3 made a round trip, New York to San Francisco and ret
(27,220 miles), in 201 days. On the way home she sailed from San Francisco to Cape Horn in 35 days.
The clipper ships often beat the time of the steamships between New York and Ireland.
Steamships—The first steamship to cross the Atlantic was the Savannah, 350 tons, built at New Y
City, which left Savannah, Ga., on May 24, 1819, and reached Liverpool in 26 days, during eighteen of wh
she used her side-paddles. The Great Western, on her maiden voyage, from Bristol, England, to N
York, covered the distance, in April, 1838, in 15 days. The Sirius, in April, 1838, went from Englan
New York in 18½ days. The Britannia, first Cunard liner, in July, 1840, came from Liverpool to New Y
in 14 days, 8 hours. The Great Western's best record across the ocean was 10 days, 10 hours, 15 minu
In May, 1851, the Pacific reduced the Atlantic record to 9 days, 19 hours, 25 minutes. The Persia
1856, did it in 9 days, 1 hour, 45 minutes; the Scotia, in 1866, in 8 days, 2 hours, 48 minutes; the Cit
Brussels, in 1869 in 7 days, 22 hours, 3 minutes; the Baltic, in 1873, in 7 days, 20 hours, 9 minutes;
City of Berlin, in 1875, in 7 days, 15 hours, 48 minutes; the Arizona, in 1880, in 7 days, 7 hours, 23 minu
the Alaska, in 1882, in 6 days, 18 hours, 37 minutes; the Etruria, in 1888, in 6 days, 1 hour, 55 minu
the Majestic, in 1891, in 5 days, 18 hours, 8 minutes; the Lucania, in 1894, in 5 days, 7 hours, 23 minu
the Lusitania, in 1908, in 4 days, 15 hours; the Mauretania, in 1910, in 4 days, 10 hours, 41 minutes.
foregoing records, since and including 1856, are between New York and Queenstown.
The best run from New York to Havre was made by the France, of the French Line, in 5 days, 17 ho
The quickest run from New York to San Francisco, via Straits of Magellan, was made by the Sa
Cruz, an oil burner, in 1914, in 47 days, 5 hours.
The day's-run record—676 knots—was made by the Mauretania, in January, 1911.
The U. S. destroyer Reid, in 1918, made 43.1 miles an hour on her trial sea trip. The motor b
Miss America, in 1920, on Lake George, N. Y., went at the rate of 77.85 miles an hour; the motor b
Maple Leaf VII. (August, 1921) made 80 miles an hour on the Solent, England.

ACROSS THE ATLANTIC BY AIR.

The U. S. naval seaplane N-C4 (Read), in 1919 (May 16-27), flew from Trepassy, British Nc
America, via the Azores, to Lisbon, Portugal, 2,150 miles, in 26 hours, 45 minutes, actual flying time.
A British biplane (Alcock-Brown), in 1919 (June 14-15), flew from St. John's, N. F., to Clifden, Irela
1,960 miles, in 16 hours, 12 minutes.
The British dirigible balloon R-34 (Scott), in 1919 (July), flew from East Fortune, Scotland, to Mine
N. Y., 3,130 miles, in 108 hours, 12 minutes, and returned from Mineola to Pulham, England, 3,200 mi
in 74 hours, 56 minutes.
A Spad airplane, in 1921, in France, flew at the rate of 193 miles an hour.

FASTEST TRIPS AROUND THE WORLD.

1889, by Nellie Bly, 72 days, 6 hours, 11 minutes; 1903, by Henry Frederick, 54 days, 7 hours, 20 m
utes; 1911, by Andre Jaeger-Schmidt, 39 days, 42 minutes, 38 seconds; 1913, by John H. Mears, 35 da
21 hours, 36 minutes.

The distances given between cities of the United States are computed by the Government, and are sured by land. In some instances the distances by water routes, or by land and water routes combined, shorter than those which are entirely by land.

PRINCIPAL AMERICAN RIVERS.

TOTAL number of navigable streams in United States, 295, tributary as follows, the total na length in miles being in parenthesis—Atlantic, 148 (5,365); Gulf, not including the Mississippi, 53 (Mississippi and branches, 54 (13,912); Canada, 2 (315); Pacific, 38 (1,606). Total navigable length, miles.

The Hudson was one of the earliest rivers of the country to be improved by the Government. began even before 1822 by the State of New York, at which time the Erie Canal was opened, and t the Erie and Champlain both emptied into the pool created by the State dam at Troy, finished apo year. Work by the United States began in 1834.

NAMES.	Sources.	Mouths.
Alabama	Junction of Coosa and Tallapoosa Rivers, Ala	Mobile River
Allegheny	Near Raymond, Pa	Ohio River
Altamaha	Ocmulgee and Oconee Rivers, Ga	Atlantic Ocean
Androscoggin	Umbagog Lake, Me	Kennebec River
Apalachicola	Chattahoochee and Flint Rivers, Ga	Gulf of Mexico
Arkansas	Rocky Mountains, Col	Mississippi River
Atchafalaya	Point Coupee Parish, La	Gulf of Mexico
Big Black	So. E. Missouri	White River, Ark
Big Horn	Rocky Mountains, Wyo	Yellowstone River
Black	Adirondack Lakes, N. Y	Lake Ontario
Black Warrior	Locust and Mulberry Rivers, Ala	Tombigbee River
Brazos	In the Staked Plain, Tex	Gulf of Mexico
Canadian	Northeastern New Mexico	Arkansas River
Cape Fear	Haw and Deep Rivers, N. Car	Atlantic Ocean

Cheyenne	Eastern Wyoming	Missouri River
Chickasaha	Kemper County, Miss	Pascagoula River
Chowan	Meheran and Nottaway Rivers, N. Car	Albemarle Sound
Cimarron	Raton Mountains, N. Mex	Arkansas River
Colorado	In the Staked Plain, Tex	Matagorda Bay
Colorado	Junction of Green and Grand Rivers, Utah	Gulf of California
Columbia	Upper Columbia Lake, B. C	Pacific Ocean
Conecuh	Pike County, Ala	Escambia River, Fla
Connecticut	Connecticut Lake, N. H	Long Island Sound
Coosa	Oostenaula and Etowah Rivers, Ga	Alabama River
Cumberland	Junction of Poor and Straight Forks, Ky	Ohio River
Delaware	Catskill Mountains, N. Y	Delaware Bay
Des Moines	Lake Shetek, Minn	Mississippi River
Dolores	San Juan Mountains, Col	Grand River
Edisto	North and South Edisto Rivers, S. Car	Atlantic Ocean
Escambia	Monroe County, Ala	Pensacola Bay
Flint	Near Atlanta, Ga	Apalachicola River
Fox	Green Lake County, Wis	Green Bay
Genesee	Near Raymond, Pa	Lake Ontario
Gila	Tuscan Mountains, N. Mex	Colorado River
Grand	Southern Iowa	Missouri River
Grand	Hillsdale County, Mich	Lake Michigan
Grand	Grand Lake, Col	Green River
Great Kanawha	Blue Ridge Mountains, N. Car	Ohio River
Green	Lincoln County, Ky	Ohio River
Greenbrier	Pocahontas County, W. Va	Great Kanawha River
Gunnison	Sagauche Range, Col	Grand River
Hackensack	Rockland County, N. Y	Newark Bay
Holston	North and South Forks Rivers, Tenn	Tennessee River
Housatonic	Taghanic Mountains, Mass	Long Island Sound
Hudson	Lake Sanford, Adirondack Mountains, N. Y	New York Bay
Humboldt	Elko County, Nev	Humboldt Lake
Illinois	Des Plaines River, Wis	Mississippi River
Indian	Eastern Florida	Atlantic Ocean
James	Formed by Jackson's and Cowpasture Rivers, Va	Chesapeake Bay
Kalamazoo	Hillsdale County, Mich	Lake Michigan
Kanawha	See "Great Kanawha."	
Kansas	Junction of Smoky Hill Fork and Solomon River, Kan	Missouri River
Kaskaskia	Champaign County, Ill	Mississippi River
Kennebec	Moosehead Lake, Me	Atlantic Ocean
Kentucky	Cumberland Mountains, Ky	Ohio River
Menominee	Brule and Michigamie Rivers, Mich	Green Bay
Merrimac	White Mountains, N. H	Atlantic Ocean
Minnesota	Big Stone Lake, S. Dak	Mississippi River
Mississippi	Lake Itasca, Northern Minnesota	Gulf of Mexico
Missouri	Rocky Mountains, Southwestern Montana	Mississippi River
Mobile	Junction of Tombigbee and Alabama Rivers, Ala	Mobile Bay
Mohawk	Lewis County, N. Y	Hudson River
Monongahela	Formed by West Fork and Tygart's Valley Rivers, W. Va	Alleghany River
Neches	Van Zandt County, Tex	Sabine Lake, Tex
Neosho	Morris County, Kan	Arkansas River
Neuse	Person County, N. C	Pamlico Sound
Ocmulgee	Northern Georgia	Altamaha River
Oconee	Altamaha River, Ga	Ocmulgee River
Ohio	Junction of Alleghany and Monongahela Rivers, Pa	Mississippi River
Osage	Lyon County, Kan	Missouri River
Ouachita	(See Washita.)	
Pamlico	Lower part of Tar River (which see.)	
Passaic	Morris County, N. J	Newark Bay
Pearl	Winston County, Miss	Gulf of Mexico
Pecos	Rocky Mountains, N. Mex	Rio Grande
Pedee (Yadkin)	Blue Ridge Mountains, N. C	Winyaw Bay, S. C
Penobscot	Somerset County, Me	Penobscot Bay
Platte	Sweetwater River, Wyo	Missouri River

The receipts in 1918 were $15,867,908, for commercial vessels.

THE PANAMA CANAL.

(Opened for Navigation August 15, 1914. Gov., Col. Jay J. Morrow, U. S. Army. Balboa Heigh

THE Panama Canal was built between latitudes 8° and 9° N. across the Isthmus of Panama at its rowest part but one. The saddle through which it crosses the continental divide was originally 335 feet above sea level. Gold Hill, the highest point immediately alongside the channel of the C rises 540 feet above sea level. The Canal has a length of 43.8 nautical miles from deep water in the At to deep water in the Pacific. The Canal extends at sea level from its starting point in Limon Bay to G 5.77 miles. At Gatun the sea level section ends in a flight of three pairs of locks, forming the ste Gatun Lake, with its normal elevation 85 feet above the sea.

Gatun Lake was formed by damming the Chagres Valley, and excess water, wasted through the way, finds its way to sea through the old course of the Lower Chagres. The Canal proceeds up the v of the Chagres 20.55 miles to Gamboa, and in this section relatively little excavation was required. Gamboa begins the real drive through the divide, the famous Culebra Cut. It is 6.97 nautical miles 300 feet wide at bottom, and extends to Pedro Miguel lock and dam, on the Pacific slope of the di Here one lock lowers the ship to Miraflores Lake, a small body about a mile long, with its surface 55 above the sea. At the south end of this lake are Miraflores locks, which, in two steps, lower the sh the Pacific. A sea level channel 7 miles long carries past Balboa and out into the Pacific.

The minimum depth of the channel is 41 feet, and in parts of Gatun Lake it is about 80 feet d The lock chambers have a clear width of 110 feet and length of 1,000 feet, giving ample handling roo the largest ships yet built. Gatun Dam, by which Gatun Lake was formed, is a big, gently sloping m built by pumping sand and clay into the space between two ridges of rock and earth. It is 1½ miles and ½ mile wide at its base. Its crest is 105 feet above sea level, and the width of the dam at the t 100 feet.

The Panama Railroad extends between Colon and Panama on the eastern side of the Canal. A br line extends from Pedro Miguel to Las Cascadas, crossing the Canal on a swinging pontoon bridge at Pa

The Canal Zone is the strip of land extending five miles on either side of the axis of the Canal not including the cities of Panama and Colon, which remain within the Republic of Panama. It h area of 441½ square miles, including land and water. It was granted to the United States by the t made with Panama, February 26, 1904. The United States paid $10,000,000 for the Zone, and r an annual payment in addition of $250,000.

Most of the British trade through the Canal is between Britain, Australia, and New Zealand; next, ween Europe and the west coast of South America; then, between U. S. and Australia and New Zealand; ween the U. S. and the Far East; and, lastly, between Europe and the west coast of North America.

COMPETITIVE CANAL TRADE ROUTES.

The coastwise trade is an American monopoly; but in the other trades served by the Canal, Amer- n ships are in competition with the ships of foreign nations, particularly Great Britain, Japan, and Nor- y. In the important trade between Europe and Australasia, 1921 fiscal year, American vessels do not re at all, and in the trade between Europe and the west coast of South America only 4 American vessels sed the Canal, all northbound, with 31,800 tons of cargo. In the oil trade between the Mexican fields the west coast of South America American tankers carried 296,342 tons out of a total 654,659 tons. h this single exception the trades in which American vessels secured any considerable tonnage had the ted States either as origin or destination.

In the trade between Atlantic and Gulf ports of the United States and the west coast of South America total southbound cargo was 933,261 tons. Of this, American vessels carried 45 per cent., British ves- 15 per cent., Japanese vessels 12 per cent., and Norwegian vessels 7 per cent. The northbound cargo regated 975,597 tons. American vessels carried 64 per cent. of the total, British vessels 14 per cent. rwegian 10 per cent., and Japanese approximately 5 per cent.

In the trade between Europe and the west coast of North America there is a great preponderance of bound cargo. Of this, American vessels carried 55 per cent., British vessels 26 per cent., and Nor- ian vessels 4 per cent. Swedish, Danish, and Dutch vessels were also operating over this route, and bably account for most of the remaining 15 per cent. Of the westbound cargo, which was relatively nportant, American vessels carried 27 per cent., British 14 per cent., and Norwegian 13 per cent.

Of cargo moving from Atlantic and Gulf ports to the Far East, American vessels carried 41 per cent., tish vessels 29 per cent., and Japanese vessels 27 per cent. Of cargo moving from the Far East to antic and Gulf ports American vessels carried 32 per cent., Japanese 38 per cent., and British 23 per t.

In the trade between the United States and Australia, British vessels had a decided advantage, carry- 71 per cent. of the total outward bound cargo as against only 14 per cent. in American bottoms. Of go moving over this route in the opposite direction American vessels carried 56 per cent. and British sels 44 per cent.

Of oil shipments from the Mexican fields to the Pacific Coast north and south of Panama, American sels carried 60 per cent., and British and Norwegian vessels shared the remainder.

THE NEW YORK STATE CANAL SYSTEM.

(Communicated by Charles L. Cadle, New York State Superintendent of Public Works.)

THE route of the improved Erie Canal, commonly known as the Erie Barge Canal, was placed in mission for the entire distance between Troy and Buffalo on May 15, 1918. The Champlain Barge C from Troy to Whitehall, was completed May 15, 1916. The Oswego Barge Canal, connecting with Ontario at Oswego, and the improvement of the Cayuga and Seneca branches connecting those lakes, have been completed.

The moneys expended upon the system, for canal improvement under recent bond issues, are as fol Erie, Champlain, and Oswego Canals, under bond issue of 1903 and 1915, $128,000,000. Cayuga Seneca Canal improvement, under bond issue of 1909, $7,000,000. For construction of terminal with warehouses, and freight-handling machinery on all canals, under bond issue of 1911, $19,00 The above figures include land damages and adjusted claims of all kinds. The entire project of enla and reconstructing the State canal system has been completed.

The improved Erie Canal is the main waterway and extends across the State from Troy to Bu Officially, the route commences at Congress Street, Troy, and follows the line of the Hudson Rive Waterford, where the westward turn is made. From Waterford the line of the Mohawk River, canal is generally followed to a point beyond Little Falls. Westerly from this point the new channel follow route of the old canal in part, but passes the northerly outskirts of the City of Utica on a new line, th to the south of Rome and then into and across Oneida Lake. Passing out of Oneida Lake, the Oneida is used to its junction with the Seneca River at Three River Point; thence through the Seneca River to through the Clyde River to a point east of Lyons; thence following the old canal, deepened and enla to a point beyond Pittsford. Here the channel leaves the old route, crossing the Genesee River abo mile south of Rochester on a pool created by the construction of a dam, joining the line of the old a few miles westerly, and continuing thence in the former channel, deepened and widened, to and thr Tonawanda Creek, canalized, to Tonawanda, where the Niagara River is entered and followed to Lake at Buffalo. The length of the Erie Canal is approximately 340 miles.

The old Erie Canal, through the city of Syracuse and portions of the same in Rochester, have porarily been continued in use together with the section between Tonawanda and Buffalo.

The dimensions of boats using the above sections of the old canal will be limited to the follov Length, 98 feet; width, 17 feet 5 inches; draught, 6 feet, and height above water line, 11 feet 6 inch

The improved Champlain Canal commences in the Hudson River at Waterford, where the impr Erie Canal starts westward, and follows generally the channel of the Hudson River, canalized, as far n ward as Fort Edward, where a new route has been established to Whitehall on the inlet of Lake Champ

The improved Cayuga and Seneca Canal branches off in a southerly direction from the improved Canal at a point near Montezuma. The Cayuga branch follows the valley of the Seneca River to Ca Lake; thence through Cayuga Lake to the Cayuga Lake inlet at Ithaca. The Seneca branch follows Seneca River in a westerly direction from the Cayuga branch near the foot of Cayuga Lake, and conn with Seneca Lake near Geneva; thence through Seneca Lake to Watkins, with an extension to Montour F

The improved Oswego Canal branches northerly from the improved Erie Canal at Three River P and follows generally the line of the Oswego River, canalized, to Lake Ontario at Oswego.

The Black River Canal has been retained without enlargement and extends from its junction with Erie Canal at Rome northerly to Carthage, although it is not navigable further north than Lyons F

The width of the new canal channel varies according to the section traversed. Through canal rivers and lakes the channel is at least two hundred feet wide. Through rock cuts in land lines a m mum bottom width of ninety-four feet has been provided, and through earth sections the minimum w at the bottom of the channel is seventy-five feet. The locks on the improved canals are uniform in The inside dimensions of the lock chambers are 300 feet in length, and 45 feet in width. The clear under fixed bridges spanning the new channel is 15½ feet.

LENGTH OF THE VARIOUS CANALS (MILES).

Erie Canal (Waterford to Tonawanda), 339; Oswego Canal (from Lake Ontario to Three River Po 24; Cayuga and Seneca Canal (from junction with the Erie Canal to Ithaca and Watkins, including Cay and Seneca Lakes), 92; Champlain Canal, 60; canal harbors at Utica, Syracuse and Rochester, 10. T canal mileage, 525.

MAGNESIUM THE LIGHTEST KNOWN METAL.

The lightest metal now known that remains comparatively unaltered under ordinary atmospheric itions is magnesium, which is only two-thirds as heavy as aluminum. Magnesium is a beautiful silvery- e metal that has been made in the United States only since 1915 and is now made at but three plants. known to comparatively few people and to most of those few chiefly as a silvery powder used for making lights in photography. It was imported from Germany for this use for many years. During the world arge quantities of powdered magnesium were made in the United States for use in star shells designed minate battlefields at night, as well as in special shells designed to show in the daytime exactly where hells containing it exploded. The white cloud by day and the brilliant white pillar of fire by night— striking features of the battlefields of the world war—were produced by the combustion of magnesium. Magnesium in massive form, as sticks or rods, is used to deoxidize other metals in foundries and is a luent of alloys. More magnesium is now used as a deoxidizer or scavenger in metallurgy than for other purpose, but its employment in alloys is increasing and may eventually become the largest one lloy of magnesium and aluminum is used in making castings for aircraft engines and parts of airplanes. skeleton of the British airship R-34, the first dirigible to cross the Atlantic, is an alloy of aluminum magnesium, and the yacht Resolute, the defender of the America's Cup in the races in July, 1920, as as the alternative defender, the Vanitie, carried gaffs made of this alloy.

WHEN THE BOAT OVERTURNS.

DON'T go out in a pleasure boat without being assured that there are life-saving buoys or cus
aboard sufficient to float all on board in case of an upset or collision. All persons should be seated b
leaving shore, and no one should attempt to exchange seats in midstream or to put a foot on the ed
gunwale of the boat to exchange seats. Where the waters become rough from a sudden squall or pa
steamers never rise in the boat, but settle down as close to the bottom as possible, and keep cool unt
rocking danger is passed. If overturned, a woman's skirts, if held out by her extended arms, whil
uses her feet as if climbing stairs, will often hold her up while a boat may pull out from the shore and
her. A non-swimmer, by drawing his arms up to his side and pushing down with widely extended h
while stair-climbing or treading water with his feet, may hold himself several minutes, often when a s
minute means a life; or throwing out his arms, dog fashion, forward, overhand and pulling in, as if reac
for something—that may bring him in reach of help.

BEAUMONT AND PORT ARTHUR SHIP CHANNEL.

(By Harvey W. Gilbert, member Waterway Committee.)

The Beaumont and Port Arthur ship channel has now become one of the greatest in the United Stat both in value of exports and imports, as well as tonnage produced. The imports consist mainly of M ican petroleum and a small amount of sisal The first shipping done in this district was through the p of Sabine Pass, which was a natural outlet for the Neches and Sabine Rivers which passed into Sabine La and emptied into the gulf through Sabine Pass. Arthur E. Stillwell built the Kansas City Southern R road from Kansas City to Port Arthur, Tex., which is inland twelve miles north of Sabine Pass. It w necessary to extend the channel up to the City of Port Arthur, which Mr. Stillwell constructed out of private funds and dedicated the channel to the United States Government.

Seven years ago the channel from Port Arthur to Beaumont was completed, the citizens of Jeffers County putting up one-half of the money to dig this channel, and the U. S. Government furnishing t other half, making a complete waterway from the gulf up as far as Beaumont, thirty miles inland. T waterway has become the world's greatest oil refining centre.

The bulk of the lumber from the great pine regions of Eastern Tex., and Western La., as well as t sulphur production of La., use this waterway. Most of the petroleum from Kan., Okla., and Tex., is r through the Beaumont refineries. The late John W. Gates settled at and developed Port Arthur.

TESTS OF DEATH.

Hold mirror to mouth. If living, moisture will gather. Push pin into flesh. If dead the hole w remain, if alive it will close up. Place fingers in front of a strong light. If alive, they will appear red; dead, black or dark.

TONNAGE EXPLAINED.

(By the U. S. Shipping Board.)

DEADWEIGHT TONNAGE expresses the number of tons of 2,240 pounds that a vessel can transport of cargo, ores, and bunker fuel. It is the difference between the number of tons of water a vessel displaces "light" and the number of tons it displaces when submerged to the "load water line." Deadweight tonnage is used interchangeably with deadweight carrying capacity. A vessel's capacity for weight cargo is less than its total deadweight tonnage.

CARGO TONNAGE is either "weight" or "measurement." The weight ton in the United States and in British countries is the English long or gross ton of 2,240 pounds. In France and other countries having the metric system a weight ton is 2,204.6 pounds. A "measurement" ton is usually 40 cubic feet, but in some instances a larger number of cubic feet is taken for a ton. Most ocean package freight is taken at weight or measurement (W|M), ship's option.

GROSS TONNAGE applies to vessels, not to cargo. It is determined by dividing by 100 the contents, in cubic feet, of the vessel's closed-in spaces. A vessel ton is 100 cubic feet. The register of a vessel states both gross and net tonnage.

NET TONNAGE is a vessel's gross tonnage minus deductions of space occupied by accommodations for crew, by machinery for navigation, by the engine room and fuel. A vessel's net tonnage expresses the space available for the accommodation of passengers and the stowage of cargo. A ton of cargo, in most instances, occupies less than 100 cubic feet; hence the vessel's cargo tonnage may exceed its net tonnage, and, indeed, the tonnage of cargo carried is usually greater than the gross tonnage.

DISPLACEMENT of a vessel is the weight, in tons of 2 240 pounds, of the vessel and its contents. Displacement "light" is the weight of the vessel without stores, bunker fuel, or cargo. Displacement "loaded" is the weight of the vessel, plus cargo, fuel, and stores.

For a modern freight steamer the following relative tonnage figures would ordinarily be approximately correct: net tonnage, 4,000; gross tonnage, 6,000; deadweight carrying capacity, 10,000; displacement loaded, about 13,350.

The phrase documented vessel is used to describe a vessel which has official documents on board establish her identity and her rights in trade. In the case of a vessel trading with foreign countries engaging in the whale fisheries, this document is called a certificate of registry.

PORTO RICO.

Under the new Organic Act of March 2, 1917, the legislative power in Porto Rico is vested in a Legis-ure consisting of two Houses. The Senate consists of nineteen members elected for four years. The use of Representatives consists of thirty-nine members elected for a term of four years. The members the Senate and House of Representatives receive $7.00 per day for ninety days of each session. Sessions held biennially.

The island of Porto Rico, over which the flag of the United States was raised in token of formal pos-sion on October 18, 1898, is the most eastern of the Greater Antilles in the West Indies and is separated the east from the island of St. Thomas by a distance of about fifty miles, and from Hayti on the it by the Mona passage, seventy miles wide. Distances from San Juan, the capital, to important points as follows: New York, 1,411 miles; Charleston, S. C., 1,200 miles; Key West, Fla., 1,050 miles; Havana, 00 miles. Population (U. S. Census), January 1, 1920, was 1,299,809.

Porto Rico is unusually fertile, and its dominant industries are agriculture and lumbering. In elevated ions the vegetation of the temperate zone is not unknown. There are more than 500 varieties of trees nd in the forests, and the plains are full of palm, orange and other trees.

The years 1898 and 1899 are calendar; 1900 covers January 1 to June 30; 1901 and succeeding years fiscal. Imports from the United States in 1899 included coin and bullion.

CUBA.

THE island of Cuba is 760 miles long, and its width varies from about 25 miles to 100 miles. Its area prises 45,881 square miles, or about that of Pennsylvania. It has numerous safe and commodious bors, that of Havana being one of the largest and finest in the world. Measuring from points of nearest roach to its neighbors, Cuba is about 100 miles from Key West, Fla., north; 54 miles from Hayti, east; miles from Yucatan, west, and 85 miles from Jamaica, south. There are 2,600 miles of railway line 250 miles of electric railways. Population, about 3,000,000; average yearly immigration, 45,000. There 5,000 primary schools.

The two principal agricultural staples of the island are sugar and tobacco. It also produces in consid-ble quantities fruits, vegetables, timber and metals, mainly iron, manganese and copper ore, and is oted to coffee and cotton raising. It has 1,246 miles of shaded roads. The average fluctuation of the perature is 12 degrees. The average in January is 70.3; July, 82.4; extremes, 60 to 92.

The Government is republican in form. The President, who is chosen by popular suffrage, serves four rs and appoints his own Cabinet. The Congress consists of a Senate and House of Representatives, one resentative being chosen for every 25,000 inhabitants, as nearly as possible. The Provinces, of which re are six, corresponding to the American States, elect their own Governors and control their own internal irs. The Cuban Senate has 24 members; the House, 91.

The Isle of Pines, which, under the generally accepted survey, is supposed to have an area of 614.34 are marine miles, or about 521,381 acres, is situated off the south coast of Western Cuba, its nearest t to the larger island being about 34½ statute miles distant, while the island itself and its adjacent s form the southern barrier of the Gulf of Batabano, a bight which extends northward to an extent cient to make Habana Province, to which the Isle of Pines is officially attached, the narrowest part of a. The Isle of Pines is practically the only land southward of Cuba to Panama, from which it is distant t 850 miles; it is 230 miles almost due east of Cape Cartuche, Yucatan, and 370 miles northwest of the d of Jamaica.

For Cuban foreign trade see index.

THE PHILIPPINE ISLANDS.

The land area of the Philippine Islands lies between 21° 10′ and 4° 40′ north latitude and between 11 and 126° 34′ east longitude. There are 7,083 islands, extending 1,152 statute miles from north to sout 682 from east to west. Of this number 462 have an area of 1 square mile or over; 2,441 are name 4,642 unnamed. The northernmost is Y'Ami Island, 65 miles from Formosa; the southernmost, Si 4° 40′ from the equator and 30 miles east of Borneo. The total land area is 114,400 square miles. largest, Luzon, contains 40,814 square miles, and Mindanao, the next in size, 36,906. Panay has Cebu, 1,695; Palawan, 4,500; Mindoro, 3,794; Bohol, 1,534; Masbate, 1,255. Between and about li other groups, including the Sulu or Jolo Islands in the south, the Babuyanes and Batanes in the nort Catanduanes in the east, Cullon in the west. Population in 1920 was 10,350,640.

The archipelago has a coast line of 11,444 statute miles, which exceeds that of the entire United S There are 21 fine harbors and 8 landlocked straits, the principal being Manila, Subic, Batangas, Ta and Hondagua, Iligan, Illana, Nasipit, Sibuguey, Sarangani Bays; the Gulfs of Lingayen, Ragay, Lag and Davao, and the San Bernardino, San Juanico, Surigao and Basilan Straits and the Verde Pas Manila Bay, with an area of 770 square miles, and a circumference of 120, is the finest in the entire Far It is a roadstead in all parts of which vessels can anchor, but a breakwater has been constructed for v to shelter behind in bad weather. Manila, Cebu, Iloilo, Zamboanga, and Jolo are the ports of entry. interisland waters are rather shallow, averaging between 75 and 500 fathoms.

The extensive mountain system of the Philippines belongs to the succession of volcanic ranges Pacific system of the world's surface. The Cordilleras, Urdaneta, Surigao, Caraballos Sur and Cara Occidentales, Caraballos del Baler and Sierra Madra are the principal ranges. Three are 20 more o active volcanoes. Mount Apo (Apo means master), 9,610 feet, in Mindanao; Mayan Volcano, 7,943 in Albay; Taal, 984 feet, in Batangas; Canlaon, 7,995 feet, in Negros; Banajao, or Majayjay, 7,144, ar most famous of these. Other high mountains are Pulog, 9,580 feet; Halcon, 8,481 feet; Malingdang, feet; Santo Tomas, 7,400 feet.

Nearly all the principal islands have important river systems. In Luzon are the Rio Grand de Cag 220 miles long, which drains 16,000 square miles of territory; the Rio Grande de Pampanga, emptying Manila Bay through a dozen mouths; the Agno, the Abra, Bued, and the more familiar Pasig. Th Grand de Mindanao, 330 miles long, is the largest in the Islands, and the Agusan, also in Mindanao, the in size. Mindoro has 60 rivers and Samar 26. In Panay are the Jalaur and Panay, and in Negre Danao and the Lanao. Interisland steamers berth in the Pasig as far as the Bridge of Spain.

November, December, January and February are the temperate months. The mean average perature at this season is about 77° to 79° Fahrenheit. In April, May and June, the hot months, the average is between 83° and 84°. In the other months it is about 80°. The nights are seldom unpleas hot even in the hot season, and a temperature of 100° is a rarity in Manila. The mountain regions north are cool as September in the temperate zone. There are two seasons the rainy and the dry. rains are heaviest in July, August and September; lightest in February and March. The lowest av rainfall for the last twelve years for the whole archipelago was 60.73 inches in the driest region, the hi 125.68 in the wettest. Manila's average was 75.46.

Manila surrendered to the Americans Aug. 13, 1898. Meanwhile a Filipino Government had established. This Government till late in 1899 was in control of the archipelago with the exception of M Cavite and a few other places where Spanish garrisons still maintained themselves. American civil ernment was established over the Philippines in 1901.

On July 1, 1902, Congress passed (chapter 1369): "An act temporarily to provide for the administr of the affairs of civil government in the Philippine Islands and for other purposes." Under this act plete civil government was established in the archipelago, except that portion inhabited by Moros, con ing part of Mindanao and the Sulu Islands, and the office of Military Governor was terminated. Wi H. Taft was appointed Civil Governor by the President, the title being subsequently changed to that of ernor-General. Gov. Taft was succeeded by Luke E. Wright in December, 1903, by Henry Clay I 1905, James F. Smith in 1906, W. Cameron Forbes in 1909, and Francis Burton Harrison in 1913. Government was composed of a Civil Governor and seven Commissioners, of whom four were Amer and three Filipinos. By act of Congress approved May 11, 1908, the Commission was increased by member, appointed by the President, making the commission nine members in all, including the Gove General, who was President of the commission.

By the act of Congress approved Aug. 29, 1916, the Philippine Commission was abolished, there l substituted as the Upper House of the Legislature a Senate composed of 24 members, and instead o Assembly, a House of Representatives of 91 members, elected triennially. The Governor-General, remains as the head of the islands, is appointed by the President. All of the Cabinet heads, except cation, are Filipinos. Senators are elected for six years.

The Philippine Archipelago is divided into 47 provinces, 35 of which are designated as regular prov and the remaining 12 as special provinces. The Chief Executive of a regular province is the Provincial ernor, who is an elective official. He, together with two other elective members, form the provincial t which constitutes the legislative branch of the Provincial Government. In the special provinces, wit exception of Mindoro, Palawan and Batanes, the Provincial Governors are appointed officials.

Of the 24 Senators only two—those from the Twelfth District, which is composed of the Mou Province, the City of Baguio, the Province of Nueva Vizcaya and the Department of Mindanao and Su are appointed by the Governor-General; all the others are elected by popular vote; as are also the 91 resentatives, excepting the nine who represent the Mountain Province, the Province of Nueva Viz and the Department of Mindanao and Sulu.

The government of the towns is practically autonomous, the officials being elected by the qua voters of the municipality and serving for taree years. The officials consist of a President, Vice-Presi and Councilors, the latter varying in number according to population. Local municipal government been instituted in about 873 municipalities and 312 municipal districts.

The administration of justice in the Philippines is intrusted to the Supreme Court, the Courts of I Instance, the Municipal Court of tne City of Manila and the Courts of the Justices of the Peace.

There are 99 school districts in the islands. Among the special Government institutions are the Nor School, the School of Arts and Trades, the Nautical School, and the Central Luzon Agricultural Sch There are provincial trade schools and shops. In 1919, in the public schools, there were scholars as foll Primary, 347,839 males, 253,501 females; intermediate, 55,082 males, 27,935 females; secondary, 12 males, 3,942 females. There are 300 private schools, with 38,500 pupils.

The 1919 crop values of the islands were: Rice, $94,300,000; cocoanuts and products of, $37,200, sugar and products of, $37,200,000; abaca (hemp), $32,500,000; corn and products of, $18,800,000; tob leaf, $8,700,000; other and total, $230,800,000. Fruits and vegetables are not included in above. 1918 there were 603,000 cattle and 1,271,000 water buffalo (carabao). Virgin forests cover 40,000 sq miles. There are 73,000,000 acres of public lands.

Under the act of 1919 any citizen of the Philippine Islands or of the United States, over the age o years, or the head of a family who does not own more than 59 acres of land in the Philippines may e a homestead of not exceeding 59 acres of agricultural land of the public domain. Total homestead fee, Any citizen of lawful age of the Philippine Islands or of the United States, and any corporation or associa of which at least 61 per centum of the capital stock or of any interest in said capital stock belongs wholl citizens of the Philippine Islands or of the United States, may purchase any tract of public agricultural l of not to exceed 247 acres in the c of an individual and 2,530 acres as a corporation or association.

There are over 800 miles of railways and 6,000 miles of public roads. Silver, lead, zinc, copper, iron, , petroleum, asbestos and manganese are mined, as well as clay, marble, salt, etc. Mineral production eds $3,000,000 a year.

FILIPINOS ARE ONE RACIALLY.

According to Dr. Merton Miller, former Chief Ethnologist, Philippine Bureau of Sciences, from the eme northern end of the archipelago to its southernmost limits, with the exception of the few scattered ritos, the people of the Philippines, pagan, Moro and Christian, are one racially. There is some reason believing that they migrated into the islands at two different times. But in all probability they came n the same general region and have a common ancestry. There are many different languages or dialects he Philippines, but all are closely related one to another, the pronunciation and mode of speech vary little from one section of the Philippines to another, and the majority of the words are common to two or e of the Philippine languages. These languages, whether spoken by pagan, Moro or Christian, belong he great Malayo-Polynesian family, branches of which are found in Sumatra, the Hawaiian Islands, lagascar and on many islands between. The early immigrants into the Philippines were the Indonesians the Malays and the blend of these two races characterizes the people of the Philippines to-day. This ixture of the Indonesians and the Malays has become so thorough that it is difficult to distinguish one ip from another.

AMERICAN SAMOA.

AMERICAN SAMOA, composed of the islands of Tutuila, Annuu, Ofu, Olosega and Talu, and the un-abited coral atoll of Rose Island, became a possession of the United States by virtue of the tripartite ty with Great Britain and Germany in 1899. The census of January, 1920, gives it a total population 6. Pago Pago is the most valuable harbor in the South Pacific, and possibly in the entire Pacific Ocean. 1920 the exports were valued at $98,213 and the imports amounted to $235,293. American Samoa tremely valuable in its relation to the expansion of American trade in the Pacific.

American Samoa is 4,160 miles from San Francisco, 2,263 miles from Hawaii, 1,580 miles from Auck-d, 2,354 miles from Sydney and 4,200 miles from Manila. The natives can all read and write and are Christians of different denominations. They are the highest type of the Polynesian race, and are greatly the increase due to the laws forbidding foreigners buying their land.

HAWAII.

HAWAII was annexed to the United States by joint resolution of Congress July 7, 1898. A bill to ate Hawaii a Territory of the United States was passed by Congress and approved April 30, 1900.

The chief executive officer of the Territory of Hawaii is the Governor, who is appointed by the President n the approval of the Senate for a four-year term, and who must be a resident of the islands in order e eligible for appointment. The Territorial Secretary is appointed in the same manner, but the heads he Territorial Departments are appointed by the Governor, with the approval of the Territorial Senate.

The Legislature of Hawaii consists of the Senate, of 15 members, elected for four-year terms; and the se of Representatives, of 30 members, elected for two-year terms. The Delegate to Congress is elected y two years, and has floor privileges in the House, but no vote.

The judiciary consists of a Supreme Court, four Circuit Courts and numerous District Courts. The ices of the Supreme Court and Circuit Courts are appointed by the President, with the approval of United States Senate.

The areas of the several islands of the Hawaiian group are as follows: Hawaii, 4,015.6 square miles; u, 598; Maui, 728.1; Kauai, 546.9; Molokai, 260.9; Lanai, 139.5; Niihau, 72.8; Kahoolawe, 44.2; lokini, .2.

Honolulu, the capital of the Territory, is situated on the Island of Oahu, and is the largest and most ortant city in the group. The City and County of Honolulu include all of the Island of Oahu.

At the time of the discovery of the islands by Capt. Cook, in 1778, the native population was about ,000. This has steadily decreased. The whole population (U. S. Census), January 1, 1920, was ,912, of which number Honolulu had 83,327, and Hilo, 10,431.

Hawaii exports to United States (1920), $192,383,185; imports from United States (1920), $74,052,453. he exports, raw sugar represented $154,550,205; and canned pineapples, $29,176,104.

There were on Jan. 1, 1920, in Hawaii, 5,284 farms, covering 2,702,245 of the 4,127,360 acreage of the ritory. The farm property was valued at $151,129,085.

Value of exports from Hawaii to U. S. (1919) $93,018,404; (1921) $127,692,879.

Value of imports by Hawaii from U. S. (1919) $43,572,794; (1921) $77,324,114.

1920 CENSUS DATA ABOUT HAWAII.

According to the U. S. Census of Jan. 1, 1920, there were in Hawaii 111,882 persons 10 years of age over engaged in gainful occupations, constituting 43.7 per cent. of the total population, and 59.8 per t. of the population 10 years of age and over. Of the gainful workers, 97,619, or 87.3 per cent., were es; and 14,263, or 12.7 per cent., were females. The male gainful workers were 84 per cent. of all males rears and over. Gainful workers, by race, were: full bloods, 8,203; part-Hawaiians, 3,899; Caucasians, 25; Chinese, 11,603; Japanese, 48,815; all others, 18,037. Japanese workers numbered 51,478 in 1910.

Reindeer values are not included in the above table. The 1920 live stock data are as follows: Reindeer, 92,933 ($2,238,562); work-dogs, 17,625; horses, 1,063; cattle, 445; foxes, 1,190; swine, goats, 133; mules, 68; sheep, 34. Reindeer in 1910 numbered 22,107.

THE VIRGIN ISLANDS.

THE principal exports of merchandise from the United States to the Virgin Islands are breadst cereals, etc.; bituminous coal, iron and steel products, boots and shoes, meat and dairy products, oils, lu and refined sugar. The principal imports to the United States from the Virgin Islands are sugar and hides and skins and cabinet woods.

The Virgin Islands were discovered by Columbus, 1493, on his second voyage. St. Thomas was colonized, 1666, by the Danes, who planted a permanent settlement in 1672, and who held on until United States bought the islands for $25,000,000 and took possession March 31, 1917 (except that English kept them, by force, April, 1801, to February, 1802, and from 1807 to 1815). St. Croix was occu by Dutch and English settlers in 1625, Denmark not getting it till 1733.

The population of the Virgin Islands by the last United States Census, January 1, 1920, was 26, as against 27,086 on February 1, 1911; 43,178 in 1835, and 38,231 in 1860. Of the 1917 population Croix had 14,901, St. Thomas 10,191 and St. John 959. The 1835 census gave St. Croix 26,681, Thomas 14,022 and St. John 2,475. The 1917 population of the cities was: (St. Croix), Christians 4,574; Frederiksted, 3,144. (St. Thomas), Charlotte Amalie, 7,747. Of the total population of the Vi Islands in 1917, 1,922, or 7.4 per cent., were whites; 19,523, or 74.9 per cent., were negroes; 4,563, or per cent., were of mixed white and negro blood; and 43, or two-tenths of 1 per cent., were of other ra

Virgin Isles exports in 1919 were valued at $1,919,525; imports, at $2,276,512.

GUAM.

THE island of Guam, the largest of the Marianas, was ceded by Spain by article 2 of the Treaty of P December 10, 1898. It lies between latitudes 13° 13′ and 13° 39′ north and longitudes 144° 37′ and 58′ east. Area estimated, 225 square miles. Distance from Manila, 1,506 miles; from San Francisco, 5, miles. The inhabitants call themselves Chamorros, but the present generation are a mixed race with Malay strain predominating. Their language, a Polynesian tongue, is also called Chamorro. About 10 cent. speak English. Instruction in the English language is compulsory in the public schools. The no ern half of the island is a plateau from 400 to 600 feet in height and is, except where cleared for cultivat wooded. The southern half is broken by hills from 1,200 to 1,300 feet high.

The total population, July 1, 1918, exclusive of officers and enlisted men of the Navy and Ma Corps and their families was 14,344, of whom 14,124 were classed as "natives." Of the foreign born p lation only 69 were Americans. Death rate per thousand was 17.6; birth rate, 47.2. Guam is under Navy Department, as a naval station. The Governor is a naval officer, designated by the President, C Roy C. Smith, named May 30, 1916. A marine barracks, naval hospital and station ship are maintai The Commercial Pacific Cable Company has a cable station in Guam, and cables from Manila, Yokoha Midway and Yap Islands are landed here. The United States Department of Agriculture has an exp ment station here. The port of entry is Apra, which is closed to foreign vessels, except by permit from United States Government. Apra is commodious, but unimproved. Capital, Agana, in the north cen part, on the western coast; population (estimated), 9,000.

WAKE AND OTHER SMALL PACIFIC ISLANDS.

THE United States flag was hoisted over Wake Island on July 4, 1898, by Gen. F. V. Greene, c manding Second Detachment Philippine expedition. It is a small island in the direct route from Hav to Hongkong, about 2,000 miles from the first and 3,000 miles from the second.

The United States possesses a number of scattered small islands in the Pacific. The largest are Chr mas, Callego, Starbuck, Penrhyn, Phoenix, Palmyra, Howland, Baker, Johnston, Gardner, Midw Morell, and Marcus Islands. The Midway Islands are occupied by a colony of telegraphers.

The Santa Barbara group is a part of California, and the Aleutian chain, extending from the penins of Kamchatka in Asiatic Russia to the promontory in North America.

BRITISH AERIAL TRADE IN 1920.

During 1920 the value of imports received by air into the United Kingdom amounted to £677 and exports therefrom £339,108, making an aggregate aerial trade of £1,016,155. Notwithstanding crease in traffic in December, the value of imports and exports (including re-exports) during the qu October to December was more than four times that of the corresponding period in 1919.

Clothes and furs were the chief articles imported during 1920; of the former a total of £307,5 value of women's outer clothing was imported by air from France, while furs worth £78,000 were simi received from the same country. In the export trade men's and boys' woolen clothing, valued at £27 was one of the principal items, but as a rule values did not show any special preponderance for parti goods, which included watches, electric-lamp parts, hair, paintings, wireless apparatus, and cinematog films.

During 1920 Great Britain imported 3,368,600 tons of oil (motor spirit, kerosene, fuel oil, lubric etc.), valued at £67,000,000. Of these imports 61 per cent. in quantity and 68 per cent. in value from the U. S., 37 per cent. in quantity and 30 per cent. in value from other foreign countries, and 2 cent. in quantity and value from British possessions.

WORLD TRADE $100,000,000,000 A YEAR.

ORLD international trade in 1920 aggregated approximately $100,000,000,000 in value, at par of ge, compared with $63,000,000,000 in the closing year of the war and $40,000,000,000 at its beginning. 20 figures of world trade, says a statement from the National City Bank of N. Y., are based on the ed trade reports of twenty principal countries whose international commerce ordinarily forms about rds of that of the world. The $100,000,000,000 total is ten times the world trade of 1870, the bank hen the United States took off its coat and entered seriously into world trade. In that year, 1870, ernational trade was about 8 per cent. of that of the world; in 1913 approximately 11 per cent.; in out 14 per cent., and in 1920 again about 14 per cent.

ior to the war we supplied but about one-sixth of the manufactures entering international trade 1920 nearly one-third. Our manufactures exported amounted to little more than $1,000,000,000 uum and in 1920 were more than $4,000,000,000, having thus increased 300 per cent. in value in the 20 period, while world international trade was increasing 150 per cent. in nominal value in that eriod.

ports form an unusually large share of the aggregate international trade of the world. As nearly now be determined the nominal value of the merchandise imported by all countries of the world will aggregate about $55,000,000,000, and the exports about $46,000,000,000, making the share mports formed of world trade in 1920 about 55 per cent.. against an average of about 52 per cent. pre-war years.

THE TRADE OF IRELAND.

the 20,000,000 acres of land in Ireland, 5,000,000 are bog, marsh, barren, mountainous, etc. In e country produced over 74,000,000 bushels of potatoes and over 65,000,000 bushels of oats, be- rley, cabbage, flax, hay, turnips, rye and wheat. There are over 5,000,000 cattle, 3,500,000 sheep, 00 pigs, 250,000 goats, 632,000 horses, 254,000 mules and asses. In 1919 imports were valued at 0,000; exports at $880,157,405. There are 320,000 acres of woodland. Coal produced exceeded ons.

MANCHURIA.

churia comprises the three Chinese Provinces of Fengtien, Kirin, and Heilungchiang. It has f 363,000 miles and a population of 19,000,000, of which 90 per cent. are Chinese. The four con-es for Manchuria are at Dairen, Antung, Mukden, and Harbin. Manchuria is traversed by ving railway lines: South Manchuria (Japanese), 700 miles; Chinese Eastern (Russian), 1,074 1 Chinese Government, 465 miles, of which 134 miles are managed by the Japanese. Postal and services are conducted by Japanese in the Kwantung Province and the So. Manchuria Railway Russians in the Chinese Eastern Railway zone, and by Chinese in the rest of the country. h and telephone systems extend to 2,400 miles. The chief seaport is Dairen, second is New-in the Mukden consular district, open for navigation from April to October. Harbin has rail-ection with Vladivostok, Dairen and Tientsin. Antung is a port of transshipment to Manchuria ese railway-borne cargo.

l Manchuria 4,900,000 acres are devoted to cultivation of beans, with an annual production of 00 bushels. About 70 per cent. is exported either in original form or in oil or bean cake, annual s being estimated at 1,000,000 tons for beans and bean cake and 120,000 tons for bean oil. ls used as a foodstuff and for brewing native spirits. Its estimated annual production is 165,-ushels. Millet is a food product in No. Manchuria. Maize is grown in S. E. Manchuria. Wheat in No. Manchuria. The sugar beet is cultivated to a small extent. Recent statistics give the f cattle as 1,000,000, horses about twice that number, and sheep 600,000. As elsewhere in China, numerous, totalling more than 5,000,000.

ge part of So. Manchuria is level and destitute of trees, except in the basin of the Yalu and in-sry (Hun) basin. In No. Manchuria nearly half the region is covered with forests. Manchuria coal, iron, gold, lead, silver, and asbestos.

HIGHEST ELEVATIONS ON PRINCIPAL WESTERN RAILROADS.

Many health seekers who are preparing to make trips from the East to the West write to th States Geological Survey, Department of the Interior, for information regarding the highest p transcontinental railroad lines, so that they may avoid going above certain altitudes. In order t such inquiries the following list has been compiled from various sources:

HIGHEST POINTS ON PRINCIPAL WESTERN RAILROADS.

Route.	Between—	Elevation (Feet).	Nearest Station.
Atchison, Topeka & Santa Fe	Kansas City, Mo., and Denver, Col	7,225	Palmer Lake

Production of coal-tar distillers does not include production of crudes at by-product coke

BIRD COUNT IN THE UNITED STATES.

(By E. W. Nelson, Chief of the Bureau of Biological Survey, United States Department of Agri

EARLY in the summer of 1914 the Biological Survey of the United States Department of Agr took initial steps toward a count of the birds of the United States for the purpose of ascertaining mately the number and relative abundance of the different species. This preliminary count pr be so satisfactory that the Survey repeated it on a larger scale in 1915 and extended it over a still area in 1916 and 1917. The results obtained in 1914 have been surprisingly corroborated by t succeeding years, and the work gives promise of producing, after a series of years, results that, in the recognized value of birds to agriculture, cannot fail to be of great value. It has been ascertained these counts that birds in the agricultural districts in the Northeastern United States average more than a pair to the acre, though in parts of the arid West and on the treeless plains this number c to an average of half a pair, or even less, to the acre.

By far the most abundant birds in the United States are the robin and the English sparrow, but others are common enough to make their total numbers run well into the millions. The count show that the most abundant bird on farms in the Northeastern States is the robin; next to this English sparrow, and following these are the catbird, brown thrasher, house wren, kingbird and b in the order named. The densest bird population anywhere recorded is near Washington, D. C. a careful count showed, in 1915, one hundred and thirty-five pairs of forty species on five acres. blocks, well furnished with trees, in the city of Aiken, S. C., harbored sixty-five pairs on ten acres. high figures show the important results which will follow from careful protection and encouragement

AUTO KILLINGS IN THE UNITED STATES.

According to the National Automobile Chamber of Commerce, the figures for 1914 to 1919 inc showing the number of deaths per car are as follows: 1914, .0025; 1915, .0024; 1916, .0021; 1917, 1918, .0016 and 1919, .0013.

The number of automobile deaths in the United States for the same years, the same authority are as follows: 1914, 4,231; 1915, 5,928; 1916, 7,397; 1917, 9,184; 1918, 9,672, and 1919, 9,827.

The National Safety Council estimates auto deaths in the United States in 1920 at not over 1 Their figures for 1918 are 9,542; and 9,826 in 1919.

The estimate is made by the Insurance Press that life-insurance companies of the country paid $4,5 in death claims from automobile fatalities during 1920, and statistics are quoted indicating that f year motoring injured 1,500,000 and caused disabilities and property damages amounting to mor $1,000,000,000.

Nearly every third farmer has an automobile—1,979,564 out of 6,448,366.

In California and Arizona a plant called Devil's Bur, with spiny seeds, punctures automobile

SUBMARINE CABLES OF THE WORLD.

COMPANIES.	No. of Cables.	Length Naut'l Miles.
American Cables, Inc.	33	31,400
Y. City to Guantanamo Bay (U. S. Naval Station), Cuba; thence via Colon to Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Guatemala, Nicaragua, Panama, Peru, Salvador, Uruguay. Galveston, Texas, to Vera Cruz and Puerto Mexico; thence to Salina Cruz, Mexico; thence to all republics of Central and South America.		
Commercial Cable Co.	15	17,281
Transatlantic System — Waterville (Ireland) to St. John's (Newfoundland). Waterville to Canso (Nova Scotia). Waterville to Azores Islands. Azores Islands to Canso. Communication in Europe—Waterville to Havre (France). Waterville to Weston-Super-Mare (England). Communication on the American Coast—St. John's (Newfoundland) to New York. Canso, N. S., to New York. Canso to Rockport, Mass.		
Commercial Pacific Cable Co.	6	10,010
San Francisco to Honolulu, to Midway Island, to Guam, to Manila, to Shanghai, and Guam to Bonin Island (Japan).		
Commercial Cable Co. of Cuba.	2	1,550
New York to Havana, Cuba. Miami, Fla., to Havana.		
Western Union Telegraph Co.	35	25,615
Transatlantic Systems as follows: Western Union—Penzance, England, to Bay Roberts, N. F., and thence via No. Sydney, N. S., to Rockaway Beach, N. Y. Anglo-Amer. Tele. Co.—Valentia (Ireland) to Heart's Content, N. F., thence to No. Sydney, N. S. Penzance, Eng., to Bay Roberts, N. F., thence to Rockaway Beach, N. Y. Direct U. S. Cable Co.—Ballinskelligs Bay (Ireland) to Harbor Grace, N. F., thence via Halifax to Rye Beach, N. H. Gulf of Mexico System.		
Compagnie Francaise des Cables Telegraphiques.	25	11,657
Brest to Horta, thence to N. Y.; Brest to Cape Cod, thence to N. Y.; Brest to St. Pierre Miquelon, thence to Cape Cod; Brest to Senegal (Dakar), thence to Pernambuco, Brazil. The West Indies system which is connected to N. Y. by the U. S. and Hayti cable from Cape Hayti, is as follows: Cape Hayti to Puerta Plata, Puerta Plata to San Juan, Porto Rico, San Juan, P. R. to Martinique, to Marie Galante and Guadeloupe. Martinique to Parimaribo, Dutch Guiana, Paramaribo to Cayenne, French Guiana, Cayenne to Para, Brazil. Also Cape Hayti to Mole St. Nicholas, Port au Prince, Guantanamo and Santiago de Cuba. Puerta Plata to San Domingo City, San Domingo City to Mayaguez, Porto Rico and San Juan, P. R., San Domingo City to Curacao and Venezuela (Caracas).

"Bell Connected Stations" are independently owned, but are connected with Bell lines and excha for the interchange of local and long distance service. "Average Daily Messages" represents the nur of messages during the year preceding the January 1 date shown, and includes local, toll and long dist messages. Figures for employees, miles of wire, and average daily messages do not include statistic the independently owned companies which connect with the Bell Telephone System.

Under date of 1919, figures for employees are as of July 31, 1918; figures for messages are for the seven months of 1918. Under date of 1920, figures for messages are for the last five months of 1919. the calendar year 1915 and thereafter, all incomplete messages were rigidly excluded from the statis In the latter part of 1918 and the early part of 1919 the number of messages was diminished by wa strictions and other conditions arising out of the war, but recovery began in the latter part of 1919 continued during 1920.

The total number of telephones, without regard to ownership, in use in the United States on Jan 1, 1921, was 13,411,379—one to every eight persons or every two families.

RAILWAY EMPLOYEES AND WAGES.

al salaries and wages (1916) $1,468,576,394; (1917) $1,739,482,142; (1918) $2,613,813,351; (1919) 28,432; (1920) $3,698,216,351. The total for 1920 excludes $44,270,585 of compensation paid es of switching and terminal companies, but includes the estimated amount of $8,670,750 to com- e retroactive back wages as per the Railroad Labor Board's decision of July 20, 1920. Totals for 1 1919 include respectively, $7,529,106 and $15,113,992 pay of corporate employees. General n 1920 were paid $47,119,465: division officers, $45,341,370; clerks, messengers and attendants, ,246, all included in foregoing totals. Average annual wages (1920)—train despatchers, $3,043; ngineers, $3,422; passenger engineers, $3,310; locomotive firemen, $2,440; passenger conductors, rakemen, $2,081.
al number of employees (1916) 1,647,097; (1917) 1,732,876; (1918) 1,841,575; (1919) 1,913,422; ,031,927. Of the employees there were 249,894 clerks, messengers and attendants; and 289,841 aborers.

IMPORTANT TUNNELS OF THE WORLD.

Alberg—Under the Alps at the Arl Mountain, and extends from Langen to St. Anton, 6¾ miles; opened 1884.
Andes Mountains—See "Trans-Andine."
Big Bend—Drains the Feather River in California, 2 miles; opened 1886.
Bitter Root Mountains (Montana and Idaho)—10,100 feet long.
Blackwell—Under River Thames, England, 1½ miles; opened 1897.
Busk-Ivanhoe Tunnel on the Colorado Midland R. R., 9,600 feet long, single track, under the Continental Divide, in Lake and Pitkin Counties.
Cascade Mountain—Through the Cascade Mountains in Washington, 3 miles.
Catskill Aqueduct—92 miles to N. Y. City, and 35 miles of distributing tunnels deep down under the city itself; partly opened in 1915, completely in 1917.
Connaught—Through Selkirk Mountains, Canada; on Canadian Pacific Railroad, double track, about 5 miles long; completed 1916.
Continental Divide, for the Denver and Salt Lake R. R., 6.4 miles long (under survey).
Croton Aqueduct—33⅓ miles to N. Y. City; opened 1888.
Cumberland—Under Cumberland Mountains, Tennessee, 8,000 feet long.
Detroit (Mich. Central Ry.)—Under Detroit River.
Gunnison—Southwestern Colorado, 6 miles; opened 1909.
Hoosac—Through Hoosac Mountains, Mass., 4¾ miles; opened 1873.
Khojak Pass—India, Quetta to Kandahar, 2 miles.
Loetschberg—Through the Alps, in Oberland, Switzerland, 9¼ miles; opened June 20, 1913, costing nearly $10,000,000.
Mont Cenis—Italy to France, under the Frejus, 8 miles; opened 1871.
Mont d'Or—Between France and Switz was bored through October 2, 1913. tunnel pierces the Jura Mountains from to Vallorbe, and is 3¾ miles long.
Mt. Roberts—From the shore of Gastineau nel at Juneau, Alaska, into Silver Bow 1 1-3 miles.
Otira—In New Zealand, 5 1-3 miles.
Roger Pass—British Columbia, 5 miles.
Rove—Northwest from l'Estaque, France, canal connecting Marseilles with Rhône 4½ miles, 72 feet wide, 47 feet high; opene
Rothschönberg—Drains the Felberg Saxony, 3 1½ miles; opened 1877.
St. Clair—Under St. Clair River from Ont., to Port Huron, Mich., 2 miles; 1891.
St. Gothard—Through the Alps, c Goschenen with Airolo, in Switzerland miles; opened 1881.
Severn—From Monmouthshire to Glou shire, England, 4½ miles; opened 1886.
Simplon—Through the Alps, 12½ miles; 1905.
Strawberry—Through the Wasatch Mou
Sutro—Drains the Comstock Lode in N 4½ miles; opened 1879.
Totley—England, 3¾ miles.
Trans-Andine Ry. Tunnel—5 miles long, feet above sea level and affords direc munication between Valparaiso and Ayres; opened April 5, 1910.
Wasserfluh—In the Alps, between Bun and Lichtensteig, Switz., 2 miles, opene
Woodhead—Liverpool to Birkenhead, Eng., the River Mersey, 3 miles.

THE ALASKA RAILROAD.

(Data furnished by the Alaskan Engineering Commission.)

On April 10, 1915, President Wilson announced the selection of the route for the Alaska Rail be built by the Government. The route adopted is known as the Susitna route and extends from on Resurrection Bay, to Fairbanks, on the Tanana River, a distance of 467 miles. This route i the existing Alaska Northern Railway, which runs from Seward through the Kenai Peninsula fo tance of 71 miles to Turnagain Arm, and has been purchased from its owners by the Governm $1,150,000.

From Turnagain Arm the route extends through the Susitna Valley and across Broad Pass Tanana River, and from there to Happy Station at Mile 463, where it connects with the Tanana Railroad, and from there on to Fairbanks. A side line extends from Matanuska Junction into the nuska coal fields, a distance of 38 miles. A spur 3 miles in length extends from this branch up Eska to the Eska coal mine.

The Tanana Valley Railroad has been purchased by the Government for $300,000. It is a 3 gauge line extending from Happy Station, on the main line, to Chatanika, a distance of 31 miles road is connected with the main line, and will be used as a feeder, and permits of the delivery of mines that are being developed northeast of Fairbanks.

While the complete rehabilitation of the Alaska Northern Railway—the portion of the line ext from Seward to Kern Creek, a distance of 71 miles—has not yet been accomplished, great progr been made in that direction. It is not yet ready for heavy traffic, but light trains now operate in all of the decaying trestles and bridges having been eliminated. Snowsheds have been erected portion of the line where needed, with the result that traffic sustained but very little interruption the past winter. Rail has now been extended from Seward (Mile 0), to Hurricane Gulch (Mile 28 from Healy (Mile 358), to Fairbanks. Between Hurricane Gulch (Mile 284), and Healy (Mile gap of 74 miles remains which is not yet completed. The clearing on this gap is finished and the g over 50 per cent. completed. It is anticipated that rail connection will be had between these two in the spring of 1922, which will give a completed line of railroad from Seward to Fairbanks, in branch lines, but not sidings and spurs, of 540 miles.

Work on the wharf facilities at Anchorage, to permit ships of deepest draught now in the Alaska to dock, is completed.

Mileage in operation: Main line Seward to Hurricane Gulch, 284; branch line to Matanusk fields, with spurs, 41; main line, Mile 358 to Nenana, 53; main line between Nenana and Fairbank row gauge), 56; Tanana Valley R. R. branches to Chatanika and Chena (narrow gauge), 32. Tot miles.

Development and prospecting work has been continued by the Government in the Matanusk fields on a small scale, the output from the two mines at Eska and Chickaloon approximating 5,30 of coal per month.

MARCH'S WEATHER TIP.

According to temperature figures taken at New Haven since 1778 the entire Spring has been wa cold according as March has been warm or cold in 115 years; in 12 years when March has been wa cold the Spring has been normal, and in only 8 out of 139 years has the Spring been the opposite of Ma

Therefore forecasts of Spring weather based on March weather prove correct forecasts in 93 pe of the years; in only 6 per cent. are they entirely wrong, or, omitting the twelve indecisive cases, ab per cent. of the indications verify.

WEIGHTS OF MILK AND CREAM.

(From the Milk Reporter.)

IN general the specific gravity of milk and cream depends on the percentage and relation of solids; emperature at which the determinations are made; and the age of the milk. The weight of one gallon ater at 68 degrees F. (20 degrees C.) according to the Bureau of Standards is approximately 8.32162 ds. Using this figure as the weight of water and using the specific gravities of milk and cream of various ntages as given in U. S. Department of Agriculture Bulletin 98, the following table has been worked s to the weights per gallon, at a temperature of 68 degrees F.

	Pct. of Fat	Spec. Grav.	Gal. (lbs.)		Pct. of Fat	Spec. Grav.	Gal. (lbs.)		Pct. of Fat	Spec. Grav.	Gal. (lbs.)
er.....		1.000	8.32162	Mixed milk				Cream.....	25.	1.008	8.3882
.....	.025	1.037	8.6295	cream.....	10.	1.025	8.5297	Cream.....	28.	1.006	8.3715
.....	3.	1.034	8.6045	Mixed milk				Cream.....	30.	1.004	8.3549
.....	3.5	1.033	8.5962	cream.....	15.	1.018	8.4714	Cream.....	32.	1.002	8.3383
.....	4.	1.032	8.5879	Cream.....	18.	1.015	8.4564	Cream.....	35.	.999	8.3133
.....	5.	1.031	8.5796	Cream.....	20.	1.013	8.4298	Cream.....	38.	.997	8.2966
.....	6.	1.030	8.5713	Cream.....	22.	1.011	8.4132	Cream.....	40.	.995	8.2800

Weights are given at 68 degrees because this is the temperature that was used in determining the specific ty (20 C. being the temperature generally used for such work). There would be a slight difference for at 50 degrees to 60 degrees, the temperature at which milk is usually received at the plant. For all practical purposes, the weight of milk testing from three to five per cent. may be figured at 8.6 ds per gallon.

THE CEREAL QUARTER IN THE UNITED KINGDOM.

npiled for the Chicago Board of Trade by G. J. S. Broomhall of the British Royal Statistical Society.)

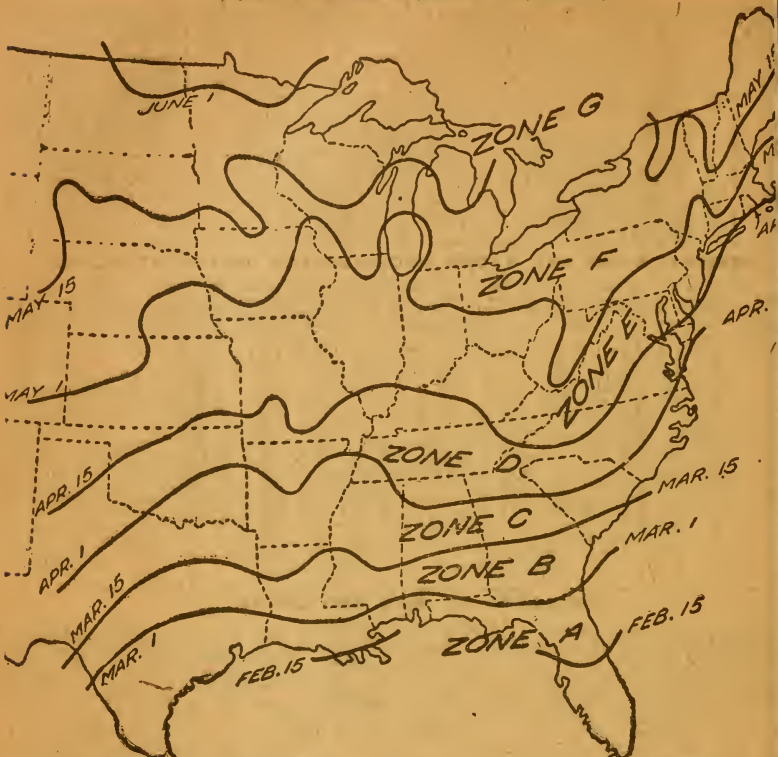
In the United Kingdom the quarter comprises among others the following conventional weights:

	Lbs.		Lbs.		Lbs.
at and corn from the		Russian barley from Black		Chilian barley.....	448
lantic and Gulf ports of		Sea and Azoff.....	400	Chilian wheat.....	500
nerica, from Argentina,		Russian oats..... {	304	New Zealand oats cif. 320 {	320
stralia, and New Zealand	480		320	lbs.; on Mark Lane..... {	336
rican and Canadian oats.	320	Russian rye.....	480	Argentine oats.....	304
at from Pacific Coast of		Danubian wheat.....	480	Linseed, American.....	424
S. A.....	500	Danubian corn—large berry..	480	Linseed, Russian.....	424
ornian and Oregon barley	448	Danubian corn—small berry..	492	Linseed, Argentine.....	416
ian wheat from Black		Danubian barley.....	400	Linseed, Bombay.....	416
a and Azoff, always.....	492	Danubian rye.....	480	Linseed, Calcutta.....	410
ian wheat from Baltic...	496	German wheat—from Dantzig,			
sian corn from Black Sea	492	500 lbs.; all others.....	504		

* If shipped from Poti, 480 pounds.

GARDEN PLANTING MAP FOR EASTERN UNITED STATES

(By the United States Department of Agriculture.)



The dates given for planting in the seven zones into which the eastern part of the United State been divided are considered to be the best for planting. Earlier and later plantings often can be n however, with fair chances of success.

PLANTING DATES BY VEGETABLE GROUPS.

ZONE.	Group 1.	Group 2.	Group 3.	Group 4.
A	Jan. 1 to Feb. 1	Feb. 1 to Feb. 15	Feb. 15 to Mar. 1	Mar. 1 to Mar
B	Feb. 1 to Feb. 15	Feb. 15 to Mar. 1	Mar. 1 to Mar. 15	Mar. 15 to Ap
C	Feb. 15 to Mar. 1	Mar. 1 to Mar. 15	Mar. 15 to Apr. 1	Apr. 1 to Apr.
D	Mar. 1 to Mar. 15	Mar. 15 to Apr. 15	Apr. 1 to May 1	May 1 to May
E	Mar. 15 to Apr. 15	Apr. 15 to May 1	May 1 to May 15	May 15 to Jun
F*	Apr. 15 to May 1	May 1 to May 15	May 15 to June 1	May 15 to Jun
G*	May 1 to May 15	May 15 to June 1	May 15 to June 15	(†)

* For the crops grown. † Season too short for this group. Group 1 (may be planted two weeks b last killing frost)—Early cabbage plants from hot bed or seed box, radishes, collards, onion sets, smooth peas, kale, early potatoes, turnips, and mustard. Group 2 (may be planted about the date of last killing frost)—Beets, parsnips, carrots, lettuce, salsify, spinach, wrinkled peas, cauliflower plants, c seed, onion seed, parsley, sweet corn, and Chinese cabbage. Group 3 (should be planted two weeks last killing frost)—Snap beans, okra, and tomato plants. Group 4 (cannot be planted until ground is warmed up, about a month after last hard frosts)—Lima beans, pepper plants, eggplant, cucumbers, mel squash, and sweet potatoes.

Because of the greatly varying altitudes in the Western States this portion of the country canno divided into definite zones. The best planting dates can be indicated only by the average date of the killing frost in each section, as is done on the accompanying map. Planting of the vegetable groups g below should be governed by the frost dates indicated. Group 1 (may be planted two weeks before last ing frost)—Early cabbage plants from hot bed or seed box, radishes, collards, onion sets, early smooth p kale, early potatoes, turnips, and mustard. Group 2 (may be planted about the date of the last kil frost)—Beets, parsnips, carrots, lettuce, salsify, spinach, wrinkled peas, cauliflower plants, celery s onion seed, parsley, sweet corn, and Chinese cabbage. Group 3 (should be planted two weeks after killing frost)—Snap beans, okra, and tomato plants. Group 4 (cannot be planted until ground is well warm up, about a month after last hard frosts)—Lima beans, pepper plants, eggplant, cucumbers, melons, squa and sweet potatoes.

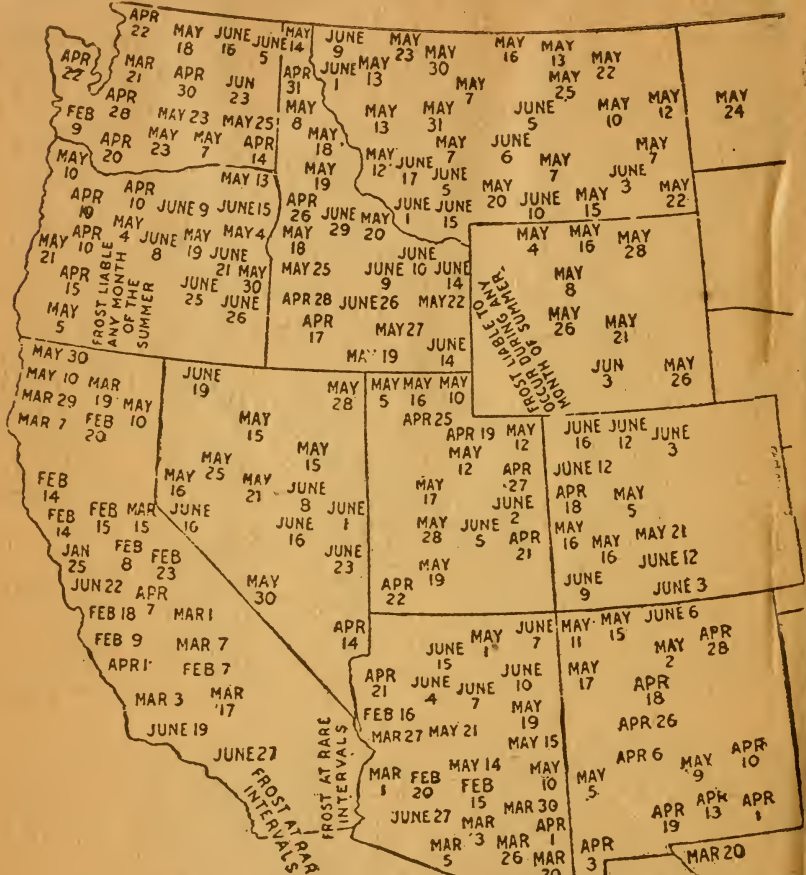
GARDEN PLANTING MAP FOR WESTERN UNITED STATES.

(By the United States Department of Agriculture. Based on average dates of last killing frost in spring.)



NOTES ON PRESERVING, BLANCHING, DRYING, ETC.

Minutes required for blanching vegetables—Asparagus, 10 to 15. Greens, 15. Brussels Sprouts, Cabbage, Corn, Lima Beans, Okra, Peppers, Peas, String Beans, 5 to 10. Beets, Carrots, Parsnips, Salsify, Cauliflower, 3. Tomatoes, till skins loosen.

Minutes required for sterilizing in hot water—Tomatoes, 22. Cauliflower, 60. Beets, Carrots, Parsnips and Salsify, 90. Asparagus, Brussels Sprouts, Cabbage, Greens, Okra, Peppers, Pumpkin, Sauerkraut, String Beans, Squash, 120. Corn, Lima Beans, Peas, 180.

Fruits require scarcely any time for blanching—Berries and Cherries, none; Pineapples, 3 to 5 minutes. Apricots, 1 to 2 min. Apples, 1½ min. Gooseberries, Oranges and Pears, 1½ min. Rhubarb, 1 to 3 min.

Minutes required for sterilizing fruits in hot water—Apricots, Berries, Cherries, Currants, Peaches, Plums, 16. Oranges, 12. Apples, Pears, Quinces, Rhubarb, 20. Pineapples and fruits without sugar, 30.

Some peaches do not peel readily even if dipped in boiling water. In such cases omit dipping in boiling water and pare them.

The time given is for quart jars. For pint jars, deduct 5 minutes. For 2 quart jars, add 30 minutes.

Home-made and commercial hot-water bath outfits are not satisfactory for canning at high altitudes as the temperature for water in them does not reach 212° F. In such localities water-seal and steam pressure outfits give better results, as much higher temperatures can be maintained.

SEED PLANTING IN THE UNITED STATES.

(Compiled from reports of the Department of Agriculture.)

NEW ENGLAND.

KIND OF CROP.	Date of Planting.	Best Soil.	Amount of Manure per Acre.	Amount of Seed per Acre (1).	Weeks to Maturity.

Buckwheat	June	Clay loam	0 to 4 tons	½ to 1½ bush	10-14
White beans	May 10 to June 10	Clay loam	8 tons	1½ bush	12
Potatoes	Mar. 15 to June 1	Sandy loam	5 to 10 tons	5 to 10 bush	10-20
Turnips	July 15 to Aug. 30	Loam or muck	8 to 10 tons	1 to 6 lbs	10-16
Mangels	Apr. 1 to May 15	Sandy loam	8 to 12 tons	6 to 8 lbs	22-24
Flax	Mar. 15 to May 15	Loam	10 to 15 tons	2 to 3 pecks	15-20
Tobacco	Seed bed, Mar	Sandy loam	8 to 10 tons	Oz. to 6 sq. rd	15-18
Hay	Apr. to May	Clay loam	10 tons	8 to 15 lbs	

SOUTHERN STATES.

Cotton	Feb. to May 15	Sandy loam (2)		1 to 3 bush	20-30
Corn	Feb. to June	Rich loam	10 bush. cot. seed	8 qts	18-20
Wheat	Sept. to Nov	Clay loam (2)	8 tons	2 bush	43
Oats	Feb., May, Sept	Clay loam (2)	8 to 10 tons	2½ bush	14-17
Barley	Apr. to May	Clay loam	8 tons	2½ bush	17
Rye	Sept. to Oct	Clay loam (2)	10 tons	1½ bush	43
White beans	Mar. to May	Light loam	8 tons	1 to 2 bush	7-8
Cabbage	Oct., Mar. to May	Light loam	6 to 10 tons	¼ to ½ lb	14
Watermelons	Mar. 1 to May 10	Rich, light loam	5 tons; 300 lbs. fer	2 to 7 lbs	16-20
Onions	Feb. 1 to Apr. 10	Loam or muck			16-24
Potatoes	Jan., Feb. to Apr	Light, loose loam	8 to 12 tons	8 to 10 bush	11-15
Sweet potatoes	May to June	Sandy loam		10 to 12 bush	12-15
Pumpkins	Apr. 1 to May 1	Rich, light loam		4 to 7 lbs	17-20
Tomatoes	Jan. 1 to Feb. 19	Rich, sandy loam		4 to 9 oz	14-20
Turnips	Feb., Aug., Apr	Rich, light loam		2 to 6 lbs	8-12
Tobacco	Seed bed, Mar	Sandy loam	8 to 15 tons	oz. to 6 sq. rd	18-20
Cow peas	May 1 to July 15	Sandy loam	200 to 300 lbs. phos	2 to 5 pecks	6-8

(1) The standard varieties of seed planted in the several sections of the United States are as follows: Corn—New England, leaming, sanford, flint; Middle States, leaming, white dent, yellow dent; Central and Western States, leaming, sanford, flint, white dent; Southern States, hickory king, gourd-seed, Cox prolific. Wheat—Middle States, fultz; Central and Western States, fultz, poole, fife; Southern States, fulcaster. Oats—New England, Clydesdale and Welcome; Middle States, white, black; Central and Western States, Sixty-day, Swedish Select and Silver mine; Southern States, Red rustproof. Barley—New England and Middle States, Manchuria and Oderbrucker; Western States, coast; Southern States, Tennessee Winter. Rye—New England, white; Middle States, white, Winter; Central and Western States, Winter; Southern States, excelsior Winter. Buckwheat—Middle States, silver hull; Central and Western States, silver hull. Potatoes—New England, green mountain, carmen 3, rose; Middle States, rose, carmen 3, rural 2; Central and Western States, hebron, rural, early rose, early Ohio. Tobacco—Central and Western States, yellow prior, Spanish, white burley. Hay, clover—Middle States, medium red. Sweet Potatoes—Middle States, yellow Jersey; Southern States, yellow Jersey. Cotton—Southern States, Texas stormproof. Spring wheat is to some extent grown in Ohio, Indiana, Illinois and many other States. It matures in eighteen to twenty weeks.

(2) In Texas the black loam is a good soil for cotton, corn, wheat and most other field crops.

VEGETABLE PLANTING TABLE.

Vegetable.	Quantity for 100 Foot Row.	Distance apart in Inches.		Depth of Planting, Inches.	Time of Planting.	Mat (in I Excep Note
		Rows.	In Row.			
Asparagus, seed	1 oz.	12 to 24	3 to 5	½ to 1.	Early spring	3 to 4
Asparagus, plants	60 to 80	36 to 48	15 to 20	8 to 10.	Early spring	1 to 3
Beans, snap	½ to 1 pt.	20 to 24	4 to 6	1	April to August	40 to

Radish	1 oz.	12 to 18	8 or 12 to ft.	½	March to September	20 to
Rhubarb, plants	33	36 to 60	36 to 48		Early spring	1 to 3
Rutabaga	¼ oz.	18 to 24	6 to 8	½ to 1.	May and June	60 to
Salsify	½ oz.	18 to 24	2 to 4	½	Early spring	120 to 1
Spinach	1 oz.	12 to 18	7 or 8 to ft.	1 to 2.	September or early spring	30 to
Squash, bush	½ oz.	36 to 48	Hills 36 to 48	1	April to June	60 to
Squash, late	½ oz.	84 to 120	Hills 84 to 108	1	April to June	120 to 1
Tomato, seed	⅛ oz.	36 to 48	30 to 36	½ to 1.	May and June. (Start in hotbed dur'g Feb. and March)	100 to 1
Tomato, plants	33 to 40	36 to 48	30 to 36		May and June. (Start in hotbed dur'g Feb. and March)	80 to 1
Turnip	½ oz.	18 to 24	6 or 7 to ft.	¼ to ½.	April and August	60 to
Vegetable marrow	½ oz.	96 to 144	Hills 96 to 108	1 to 2.	April to June	110 to 1
Watermelon	½ oz.	96 to 120	96 to 120	1	May	100 to 1

Note—Set rhubarb plants so that growing tips are at surface of ground.

How Much Seed to Buy: The following amounts of seed will plant in each case a garden row 100 ft. lon

String Beans.....½ to 1 pint
Lima Beans.....½ to 1 pint
Cabbage.....¼ ounce
Carrot.....1 ounce
Cauliflower.....1 packet
Celery.....¼ ounce
All Squash.....½ ounce
Beets.....2 ounces
Sweet Corn.....½ pint
Lettuce.....½ ounce
Muskmelon.....½ ounce
Cucumber.....½ ounce
Eggplant.....½ ounce
Kale or Swiss Chard.....½ ounce
Parsley.....¼ ounce
Parsnip.....½ ounce
Vegetable Oyster (Salsify).....½ ounce
Onion Sets (bulbs).....1 qu
Onion Seed.....1 oun
Peas.....1 to 2 pi
Radish.....1 oun
Spinach.....1 oun
Tomatoes.....½ oun
Turnip.....½ oun

1 or 2 pecks of early potatoes and ½ to 1 bushel of late potatoes are enough to plant to supply fo persons.

QUANTITY OF SEED USUALLY SOWN PER ACRE.

Barley, broad.... 2 to 3 bus.
Beans, dwarf, drills.1½ bus.
Beans, pole, hills....10 to 12 qts.
Beets, hills.....5 to 6 lbs.
Broom corn, hills....8 to 10 qts.
Buckwheat.....1 bus.
Cabbage transp.....½ lb.
Carrot drills.....3 to 4 lbs.
Clover, red, alone...12 to 20 lbs.
" white, alone.12 to 15 lbs.
" Lucerne or Alfalfa.....20 lbs.
Corn, hills.....12 to 16 qts.
" soiling.....3 bus.
Cucumber, hills.....2 lbs.
Flax, broadcast.....1½ bus.
Grass, Ky. blue.....3 bus.
" Orchard.....3 bus.
" Red Top.....3 bus.
" Timothy.....½ bus.
" Hung.....¾ to 1 bus.
" Mixed Lawn..3 bus.
Melon, musk.....2 to 3 lbs.
Melon, water, hills..4 to 5 lbs.
Millet, common.....¾ to 1 bus.
Oats, broadcast.....2 to 3 bus.
Onion, drills.....5 to 6 lbs.
" for sets, drills..30 lbs.
" sets, drills.....6 to 12 bus.
Parsnips, drills.....4 to 6 lbs.
Peas, drills.....3 bus.
" broadcast.....3¼ bus.
Potato (cut tubers)..7 bus.
Pumpkin, hills.....4 to 6 lbs.
Radish, drills.....8 to 10 lbs.
Rye, broadcast.....1½ to 2 bus
Sage, drills.....8 to 10 lbs.
Spinach, drills.....10 to 12 lbs
Squash, bush, hills..4 to 6 lbs.
Salsify, drills.....8 to 10 lbs.
Squash (run.), hills..3 to 4 lbs.
Tomato, to transp..¼ lb.
Turnip, drills.....1 lb.
" broadcast...1 lb.
Wheat.....1½ to 2 bus
8 lbs. Clover, ½ bu. Timothy and 1 bus. Red Top for 1 acre mixed, for general seeding.

ANNUAL LOSS TO THE UNITED STATES CAUSED BY INSECTS.

Farm crops—Cereals, $430,204,600; hay, $116,230,500; cotton, $140,631,100; tobacco, $16,900,800; vegetables, $199,412,600; sugar crops, $8,436,800; fruits, $141,264,300; farm-forest products, $22,138,900; other crops, $29,649,700; farm crop total, $1,104,869,300.

Forests and forest products, $100,000,000; products in storage, $100,000,000; insect-borne diseases of man, $150,000,000; damage to domestic animals, $100,000,000; grand total, $1,554,869,300.

MAJORITY OF INSECTS HELPFUL TO MAN.

As against over 7,000 deaths per year due to railroad accidents there are 97,200 deaths each year in this country due to malaria and intestinal diseases, spread by insect carriers. And while in the whole Spanish War only 300 men were killed by Spanish bullets, 5,000 died of fly-borne diseases. Yet the great majority of insects are either harmless or beneficial to man.

Although we are able to determine the damage done by insects it is impossible to calculate the benefits they confer. Practically no fruits could be formed without the blossom-pollinating aid of insects, and the production of a harvest, insects, especially bees, of course, dwarf into insignificance all modern implements of husbandry. It would be impossible to get a single crop of red clover without the aid of insects, and the present scarcity of bumble bees, who usually perform this service, is making itself felt in the smaller crops and lower vitality of the clover seed. Their importance in this connection was realized in Australia and the Philippine Islands, which imported bumble bees for the sake of their clover crops. Figs could not be successfully grown in this country until a fig pollinating insect was imported from the Mediterranean countries. A great majority of the beautiful flowers depend on insects for the development of their seed,

FARMS AND FARM ACREAGE IN THE UNITED STATES, 1920-1910.

	Jan. 1, 1920.	April 15, 1910.		Jan. 1, 1920.	April 1910
Number of farms	6,448,366	6,361,502	Other unimp. land...acres	280,079,122	209,48
Land in farms, total...acres	955,676,545	878,798,325	Average per farm:		
Improved land.....acres	506,982,301	478,451,750	All land.....acres	148.2	1
Woodland.....acres	168,615,122	190,865,553	Improved land.....acres	78.6	

A "farm" for census purposes is all the land which is directly farmed by one person, either by his own labor alone or with the assistance of members of his household or hired employees. The land operated by a tenant, renter, cropper, or manager is considered a farm.

The number of farms in the United States on Jan. 1, 1920, according to the Fourteenth Census, was 6,448,366, as compared with 6,361,502 on April 15, 1910, representing an increase of 86,864, or 1.4 per cent.

Total Farm Acreage.

The total area of land in farms in 1920 was 955,676,545 acres, as compared with 878,798,325 acres in 1910, showing an increase of 76,878,220 acres, or 8.7 per cent. The greater part of this increase was reported from the States of the Mountain Division, where considerable land has been taken up for "dry farming" purposes under the new homestead laws, and where large areas have been acquired for grazing purposes. Outside of the Mountain States, the three States showing the largest increases in farm acreage were North Dakota, South Dakota, and Nebraska.

Improved Land in Farms.

Improved land in farms includes all land regularly tilled or mowed, land in pasture which has been cleared or tilled, land lying fallow, land in gardens, orchards, and vineyards, and land occupied by buildings. Of such land, 506,982,301 acres reported in 1920, as compared with 478,451 acres in 1910. The increase in improved land amounted to 28,530,551 acres, or 6 per cent.

Woodland in Farms.

Woodland, as the term was defined for use in farm census, includes all land covered with nat or planted forest trees which produce, or later produce, firewood or other forest products. acreage of such woodland included in the farm in 1920 was 168,615,122, as compared with 1 865,553 in 1910. These figures indicate a decr of 22,250,431 acres, or 11.7 per cent. The decr in the acreage of woodland in farms doubtless re sents a part of the general decrease in the wood area of the country. Farm woodland, howe represents only a small part of the total forest s

Other Unimproved Land in Farms.

This classification includes all farm land whic neither improved land nor woodland. The acr of such land reported in 1920 was 280,079,122 compared with 209,481,022 in 1910. The incr of 70,598,100 acres, or 33.7 per cent., doubtless cludes considerable areas of woodland which been cut over and large areas of pasture or gra land which have recently been made into farm

The average value of land and buildings per acre of land in farms in the United States in 1 $70.94, as compared with $39.60 in 1910.

The average value of land and buildings per farm for the United States as a whole in 1920 was as compared with $5,471 in 1910.

The value of implements and machinery per farm in 1920 was $558, as against $199 in 1910

The average value of a farm in New York State in 1920 was $9,879, as against $6,732 in 1910; Jersey, $10,499 ($7,610 in 1910); in Pennsylvania, $8,550 ($5,715 in 1910).

In the census reports a distinction is made between farmers operating their own land only and who hire some land in addition to that which they own. The former are classified as "full owne the latter as "part owners." The value of farms operated by full owners in 1920 was $30,717 and of those operated by part owners, $9,156,810,001. The corresponding figures for 1910 wer owners, $17,310,639,016, and part owners, $5,056,295,262.

Number of farms reporting mortgage debt (1920), 1,193,878; (1910) 1,006,511.

Value of mortgaged land and buildings (1920), $13,772,729,610; (1910) $6,330,236,951.

The per cent. of increase in value of mortgaged land and buildings, 1910 to 1920, was 117.6.

The total number of farms operated by their owners in the United States on Jan. 1, 1920, according the Fourteenth Census, was 3,925,090. Of this number it is estimated that 1,611,378, or more than per cent., were mortgaged and 2,313,712 were free from mortgage.

In 1910 there were 3,948,722 farms operated by their owners. Of this number 1,327,439, or 33.6 per t., were mortgaged and 2,621,283 free from mortgage.

In New York State, of 151,717 farms operated by owners, 75,522 are free from mortgage.

Of the 6,448,366 farmers in the U. S., 6,186,813 are male, and 261,553 (4.1 per cent.) are female. Of owner-farmers, 3,737,326 are males, 187,769 females; of the managers, 67,762 are male, 763 female; the tenant farmers, 2,381,725 are male, and 73,021 female.

Of the total farm acreage, males operate 929,878,145 acres; females, 25,798,400 acres.

Of the 2,454,746 tenant farmers (1920), 1,117,730 tilled on shares; 561,005 (in the South) were "croppers"; 127,834 were on share-cash basis; 480,027 were cash tenants; and 104,987 (in the South) were sliding renters. Tenant farmers in 1910 numbered 2,354,676.

Native white farmers were 76.3 per cent. of all farmers in 1920, as against 75.0 per cent. in 1910; foreign-born white farmers were 9.0 per cent., as against 10.5 per cent. in 1910; colored farmers, 14.7 per cent., as against 14.5 per cent.

In N. Y. State, in 1920, foreign-born white farmers were 13.3 per cent. of all farmers, as against 12.5 per cent. in 1910.

NATIONALITY OF FOREIGN-BORN FARMERS IN U. S., 1920—*Continued.*
(U. S. Census Returns. Table shows countries of birth.)

Figures indicate number of farmers born in respective countries.

Foreign-born farmers are most numerous in the North Central States, although there are consi able numbers in the Pacific States, and a relatively high proportion of the total number of farmers in s of the Eastern States are foreign-born. There are very few foreign-born farmers in the South, excep Texas.

The countries showing increases in foreign-born farmers in the United States between 1910 and 1 were Poland, with an increase of 10,124, or 140.1 per cent.; Hungary, with an increase of 3,294, or per cent.; Italy, with 7,647, or 72 per cent.; Russia, with 6,595, or 25.6 per cent.; and Holland, with 1,7 or 13 per cent.

The largest relative decreases were as follows: Ireland, 50.5 per cent.; Wales, 39.7 per cent.; Germa 36.6 per cent.; England, 33 per cent.; and Scotland, 25.6 per cent.

VALUE OF FARM CROPS BY STATES IN 1919.

(U. S. Census; does not include products of forests, nurseries, and greenhouses.)
tals of the columns are beneath the table.

egetables include potatoes and sweet potatoes. Hay and forage include $206,934,650 of corn cut age.

S. totals, 1919 (1909 totals are in parenthesis)—Cereals, $6,941,242,074 ($2,665,539,714); hay and $2,523,992,544 ($826,401,175); vegetables, $1,302,904,344 ($418,110,154); all other, $3,987,219,445 4,799,640); total, $14,755,358,407 ($5,231,850,683).

COST OF LABOR, FERTILIZER AND FEED ON FARMS, IN 1919.

(1909 figures are in parenthesis.)

ish wages of farm labor, $1,101,586,456 ($521,729,941); value of farm hands' rent and board, $261,- 4 ($129,881,346); cost of fertilizer, $329,189,912 ($114,882,541); cost of live-stock feed, $1,101,228,543 39,857).

ther 1919 crop yields—Buckwheat, 746,306 acres, 12,735,537 bushels. Hay, 72,824,890 acres, 90,- 3 tons. Silage, 4,006,436 acres, 29,693,804 tons. Peanuts, 1,125,100 acres, 27,449,930 bushels. 11,092 acres, 35,321,712 bushels. Sugar cane, 373,398 acres, 3,551,129 tons. Sugar beets, 636,414 5,993,409 tons. Cane syrup made on farms, 21,240,960 gallons. Sorghum grown for syrup, 482,043 1,644,100 tons; sorghum syrup made, 21,523,025 gallons. Maple trees tapped, 17,448,421; maple made, 9,691,624 lbs.; maple syrup made, 3,505,715 gallons.

SCURVY AND PASTEURIZED MILK.

The National Commission on Milk Standards of the New York Milk Committee, at its annual co tion, in May, 1920, adopted a resolution regarding scurvy and milk pasteurization, containing the foll language: "It has been demonstrated to the satisfaction of all of the most eminent authorities in nu that scurvy is due to the lack of a specific dietary factor which is easily destroyed by heating, and tha which has been pasteurized has lost, in part at least, its protective action against this disease.

"It has likewise been demonstrated that there may be pronounced differences in the value of unheated milks in their antiscorbutic value, depending on the nature of the diet of the cow or lac woman. The antiscorbutic substance is found abundantly only in fresh fruits, vegetables, green and other forage. Cooked foods, with certain exceptions, such as tomatoes, are of little value, an milk of a mother whose diet consists largely of cooked or dried or preserved foods will not protect her against this disease unless some substance rich in antiscorbutic properties be included. The milk of will be more effective as an antiscorbutic food when they are fed green foods.

"In view of these new discoveries concerning the possibility of the variation of the nutritive va milks, to some extent, with the diet and the seasons, and *in view of the possible reduction of the food va milk with respect to the antiscorbutic factor in the process of pasteurization, the commission recommend orange juice or tomato juice or other antiscorbutic food be added to the diet of infants, especially those artif fed.* The commission wishes also to reaffirm its advocacy of the adoption of pasteurization by municip as a public health measure."

Total area includes, besides cultivated land, also natural meadows and pastures, forests, wood lots, lands devoted to cultivated trees and shrubs. Cultivated land includes fallow lands; also artificial lands. The figure for "cultivated land" in Switzerland excludes artificial meadows and pastures.

WHEAT HARVEST SEASONS OF THE WORLD.

(Compiled by the Chicago Board of Trade.)

ry—Australia, New Zealand and Chile.
ary and March—East India, Upper Egypt.
—Lower Egypt, Syria, Cyprus, Persia, Asia nor, India, Mexico and Cuba.
—Algeria, Central Asia, China, Japan, Morocco, as and Florida.
—Turkey, Greece, Italy, Spain, Portugal, South France, California, Louisiana, Mississippi, bama, Georgia, Carolinas, Tennessee, Virginia, tucky, Kansas, Arkansas, Utah, Missouri.
—Roumania, Bulgaria, Austria-Hungary, South Russia, Germany, Switzerland, France, South England, Oregon, Nebraska, Minnesota, Wisin, Colorado, Washington, Iowa, Illinois, iana, Michigan, Ohio, New York, New England Upper Canada.
August—Belgium, Holland, Great Britain, Denmark, Poland, Lower Canada, Columbia, Manitoba, North and South Dakota.
September and October—Scotland, Sweden, Norway and North of Russia.
November—Peru, South Africa and Argentina.
December—Burmah and Argentina.

CORN HARVEST TIME.

January—New South Wales.
March and April—Argentina.
September and October—All European countries.
October—The crop of the United States is harvested principally in this month.

WORLD PRODUCTION OF FLAX.

Of the yearly total of 500,000 tons of flax produced for manufacturing purposes, Russia raises 400,000 France and Belgium, 50,000; Ireland, 10,000; Netherlands, 10,000; Germany and Austria, 30,000. elative values in normal times are: Courtral flax, £80 ($389) to £100 ($486) per ton; Irish, £60 ($292); an, £40 ($194). In these countries the output of the linen industry, which is chiefly centred in the of Ireland, is worth about £15,000,000 ($72,997,500) a year, of which £9,500,000 ($46,231,750) repre- the export trade. The Irish industry is largely dependent on foreign sources for its supply of raw rial; only about one-eighth of its consumption of raw flax is produced at home.

OFFICIALS FROM WHOM GAMING AND FISHING LAWS MAY BE OBTAINED

Alabama—The Commissioner of Conservation, Montgomery.
Alaska—The Governor, Juneau; Secretary of Commerce, Washington, D. C.
Arizona—State Game Warden, Phoenix.
Arkansas—Secretary, Game and Fish Commission, Little Rock.
California—Executive Officer, Fish and Game Commission, New Call Building, San Francisco.
Colorado—State Game and Fish Commissioner, Denver.
Connecticut—Secretary, Commission of Fisheries and Game, Hartford.
Secretary, Shell Fish Commission, New Haven.
Delaware—Secretary, Game and Fish Commission, Dover.
District of Columbia—Superintendent Metropolitan Police, Washington.
Florida—Secretary of State, Tallahassee.
Georgia—Game and Fish Commissioner, Atlanta.
Idaho—Fish and Game Warden, Boisé.
Illinois—Chief Game and Fish Warden, Springfield.
Indiana—Director, Department of Conservation, Indianapolis.
Iowa—State Fish and Game Warden, Lansing.
Kansas—State Fish and Game Warden, Pratt.
Kentucky—Executive Agent, Game and Fish Commission, Frankfort.
Louisiana—Commissioner of Conservation, Court Building, New Orleans.
Maine—Commissioner of Inland Fisheries and Game, Augusta.
Maryland—Conservation Commission, 512 Munsey Building, Baltimore.
Massachusetts—Chairman, Commissioners of Fisheries and Game, State House, Boston.
Michigan—Commissioner Game, Fish, and Forest-Fire Department, Lansing.
Minnesota—Game and Fish Commissioner, St. Paul.
Mississippi—Department of Game and Fish, Jackson.
Missouri—Game and Fish Commissioner, Jefferson City.
Montana—Game and Fish Commission, Helena.
Nebraska—Chief Deputy, Game and Fish Commission, Lincoln.
Nevada—State Fish and Game Warden, Carson City.
New Hampshire—Fish and Game Commissioner, Sunapee.
New Jersey—Secretary, Board of Fish and Game Commissioners, Trenton.
New Mexico—Game and Fish Warden, Santa Fé.
New York—Secretary of Conservation Commission, Albany.
North Carolina—Secretary, Audubon Society of North Carolina, Raleigh.
North Dakota—Secretary, Game and Fish I Steele.
Ohio—Chief Game Warden, Board of Agricu Columbus.
Oklahoma—Secretary, Game and Fish Comm Oklahoma City.
Oregon—Secretary, Fish and Game Commi Portland.
Pennsylvania—Secretary, Board of Game an Commissioners, Harrisburg.
Rhode Island—Secretary, Fish Commission, dence.
South Carolina—Chief Game and Fish W Columbia.
South Dakota—State Game and Fish W Pierre.
Tennessee—State Game and Fish Warden, ville.
Texas—Game, Fish, and Oyster Commiss Austin.
Utah—Fish and Game Commissioner, Salt City.
Vermont—Fish and Game Commissioner, pelier.
Virginia—Commissioner of Game and Fisheries, Richmond.
Washington—Chief Game Warden and State Commissioner, Olympia; Chief Deputy Warden, Spokane.
West Virginia—Forest, Game, and Fish Wa Charleston.
Wisconsin—Secretary, Conservation Commi Madison.
Wyoming—State Game Warden, Cheyenne.

CANADA.

Alberta—Chief Game Guardian, Edmonton.
British Columbia—Secretary, Game Conserv Board, Vancouver.
Manitoba—Chief Game Guardian, Winnipeg.
New Brunswick—Chief Game and Fire W Fredericton.
Northwest Territories—Commissioner of Ottawa.
Nova Scotia—Chief Game Commissioner, H
Ontario—Superintendent Game and Fish Toronto.
Prince Edward Island—Game Inspector, Char town.
Quebec—General Inspector of Fisheries and Quebec.
Saskatchewan—Chief Game Guardian, Regin
Yukon—Gold Commissioner, Dawson.
Colony of Newfoundland—Secretary, Depart of Marine and Fisheries, St. John's.

The totals in both tables above include flour reduced to wheat bushels.

TREES AS LIVING THINGS.

(From an Address in Congress by Representative Martin L. Davey, of Ohio.)

r. Speaker, it is my desire, during the time at my disposal, to speak of the tree as a living thing, to ometning of its vital relation to human life. To the man who is familiar with tree life it might seem superfluous to emphasize the fact that a tree lives, and yet the average man, unfortunately, looks he tree as an inanimate and more or less useful accident on the face of the earth.

d yet the tree lives—it breathes. It has a real circulation. The tree digests its food and assimi- It has sexual processes that are just as real and beautiful as in any other form of life. It has ver to adapt itself to its environment. To be sure, it lacks intelligence and a nervous system and ver of locomotion. But in all the other elemental processes the tree functions just as truly as man

e tree breathes through the leaves chiefly and, to a small extent, through the tiny lenticels in the bark. The air is taken into the leaf in just as real a sense as it is taken into the human lungs. It through the many microscopic openings on the underside of the leaf. There on the inside of the leaf nents of the air are separated. The carbon is absorbed and is used in the building process. The is given off again to enrich the air for the benefit of all animal life.

e circulation in the tree is just as real as in the human body. It does not move so fast nor move and round in response to heart action. Yet it does move and goes from the tiniest root hairs way nderground up to the leaves and back again all the way to the roots again. On the upward flow culation proceeds through the sapwood, traveling from cell to cell from the small roots to the large to the trunk, and from there to the large branches, and then through the smaller ones to the leaves. he leaf, where it undergoes the necessary chemical change to transform it into tree food, it travels rd through the cells of the inner bark all the way to the smallest roots, building the cambium layer es.

Digestive Processes of Trees.

e digestive processes of the tree take place in the leaf. There the crude food material, brought up e roots in the sap, is spread out among the tiny cells of the marvellous leaf structure, and, under the e of the sunlight, is combined with the carbon extracted from the air and is transformed into tree igested, as we call it in animal life. This digested food is assimilated into the entire growing parts ree in the downward flow through the cells of the inner bark, from which the cambium layer is built growth takes place.

e sexual processes of the tree are fundamentally the same as elsewhere in living things. The male ale exist as positive factors. Sometimes the male and female exist in the same flower. Many times ist in different flowers in the same tree. In a few cases all the flowers of a tree are entirely male or female. The pollen is created in the male and is carried by insects or birds, and in a vast number by the wind, to the female portion of the flower or to the female flower. There it fertilizes and produces d which nature designed to reproduce its kind.

e tree adapts itself to its environment to an amazing degree. Where trees are thick they grow tall n the sunlight. Where two or more trees grow close together, it grows on one side to accommodate ws. When it grows in rocks, it sends its roots into almost impossible places in search of food and ge. It often sends its roots hundreds of feet in search of water, and the roots travel back and forth the many obstacles toward their destination.

life has two primal purposes of existence—one is self-preservation and the other is reproduction. e subscribes to both and is governed by both. It undergoes a constant battle for life from the time dvent until the end. It must battle against the tremendous winds, against drought, against insect s and deadly diseases; and now it must battle against man himself, who is the most destructive, the oughtless, and inconsiderate enemy that the tree has encountered. Indeed, it has a lifelong struggle preservation. Its scheme of reproduction is the same elemental plan of sex attraction that makes the continuity of all life.

e leaf is probably the most wonderful, and is certainly the most vital and indispensable factor in ld of living things. Without the leaf all life must perish. It is the one and only connecting link n the organic and inorganic worlds. It is the only thing capable of transforming the various mineral s into available food material for both plant and animal. The only minerals that man can take into em and use are water and salt, but he can use only a limited quantity of these. Every other element must come to him either directly or indirectly through the leaf.

ery grain, every fruit, every vegetable food product, every foot of lumber, and every other vegetable that is used for the pleasure and profit of man is made in the leaf. And thus we see that the great o created the world and the life that inhabits it made of the lowly leaf the greatest and most ful instrumentality of that life.

Fungi Diseases.

haps the most insidious and persistent enemy of the tree is the group of diseases called fungi, which ny exposed portion of woody tissues and start to grow by consuming the wood cells. A fungus exists in a decaying tree—it produces decay. At the proper time in the growing season the fungus s a fruiting body or bodies. These produce their fruit in due time, which are called spores. These light in weight and microscopic in size, are given off in myriads and are carried by the winds and hes otherwise to the adjacent vegetation. Most of them fall harmless, but some of them find lodg- a wound where the protecting bark has been removed. There in the exposed woody tissues the opic fungus spore starts to grow, sending out little threadlike tentacles from cell to cell and breaking own.

e fungus is a parasite—a low form of vegetable life. It lives by destroying some other form of life. hich attacks the living tree destroys the interior cells and persists until the tree is consumed. What decay is only the result of an active disease which consumes the woody interior that constitutes the al strength of the tree.

nterior of a tree is often referred to as the heart or heartwood. This conveys an entirely wrong im- The vital parts of a tree are the leaves and roots, the bark and cambium, and outer layers of sapwood. e outside layers of sapwood which are the most active, and each succeeding layer inward toward tre becomes less and less active until those near the centre become practically dormant.

s gives the reason for the development of tree surgeons and the science of tree surgery. The disease decay against which the tree, unaided, is helpless. It is the function of the tree surgeon to do for what the dentist does for the teeth and the surgeon does for the human body. In the practice of he must remove the decay, disinfect to prevent further decay, thoroughly waterproof to protect osed wood. But in place various kinds and forms of mechanical bracing often complicated and ngenious, prepare the cavity so that the filling will remain permanently in place, and then fill with l precision so that the filling will become a permanent part of the tree. Water and all foreign sub- must be excluded. The filling must be cleverly built up in sections somewhat like the backbone human body in order to permit a reasonable movement between the sections in the swaying, and of the tree in heavy winds. Nature rewards the skill of human hands by the gradual healing of over the filling. I cannot pass this interesting science of tree preservation without paying a little to John Davey, the nature lover and creative genius who gave to the world an invaluable science, he called tree surgery. It represents his love. It is the product of his life of service.

THE ANCIENT FORESTS OF NORTH AMERICA.

LONG ages ago, in the early Cretaceous period, according to Prof. J. E. Kirkwood, of the Uni of Montana, a continuous forest of conifers and cycads covered the North American Continent. late Cretaceous the land became divided by an arm of the sea which extended north from the Gulf Arctic, through what is now Texas and Montana. During this period was the beginning of the t differentiation of the Eastern flora from that of the West. In the East are the elm, hickory, ch persimmon, sassafras, tulip, Osage orange, and magnolia, which are not found on the Pacific coast; West are the Sequoias, cypress, and giant cactus, which do not occur east of the Rocky Mountains. are on both coasts, but not the same species of oaks; the same to a large extent is true of maples, pines, firs, and many others. Toward the close of the Cretaceous there entered many hardwood of modern form. The Eastern slope of the Rockies was more humid in the Cretaceous and Tertiar now, as one may judge by the petrified forests scattered from the Yellowstone Park to Arizona, a remains of holly, oaks, elms, chestnuts, Sequoias, and other trees in the florissant shales of Colora the Tertiary age the East and West were again united by land. But this was a period of successi lifts and depressions. Areas became submerged and their forests destroyed. Other areas were sul to severe changes locally. Erosion and other disturbances must have greatly modified the characte portion, and distribution of the species. Then came the Ice Age, and forests re-established them

The original forests of the United States covered about 822,000,000 acres and contained 5,20(000,000 board feet of timber. There are left (June 30, 1921) 463,000,000 acres of forest land, cont 2,215,000,000,000 board feet. Of this, 137,000,000 is in virgin timber, 112,000,000 acres is culle second-growth timber large enough for sawing, 133,000,000 acres is partially stocked with smaller gi and 81,000,000 acres is devastated and practically waste land. The present rate of timber consum is more than four times the annual growth of the forests. Of the standing timber, 349,000,000,00 is in the New England, Mid-Atlantic, Central, and Lake States; 1,141,000,000,000 feet is in the I Coast States.

The National Forests include 156,666,045 acres (net) with annual revenues of about $4,793,000. of administration averages $4,000,000 a year. Thirty-three States have their own forestry departn

The forest fire losses in 45 States for the five-year period 1916-1920, inclusive, was $85,715,747. damage was occasioned by 160,318 forest fires, which burned over 56,488,307 acres.

PRODUCTION OF CHIEF KINDS OF LUMBER, 1918, BY STATES.

One northern hardwood tree of any variety, 21 inches in diameter 5 feet above the ground, will one cord of wood. A southern softwood tree 23 inches in diameter will yield a cord. It takes 35 nor and 25 southern hardwood trees 5 inches in diameter 5 feet above the ground, to yield one cord.

A CORD OF WOOD OR STONE.

A cord of wood or stone contains 128 cubic feet. The standard size of a piled cord of wood is long, by 4 feet wide, by 4 feet high.

THE NATIONAL PARKS AT A GLANCE.

(Number, 19; total area, 10,859 square miles.)

TIONAL PARKS IN ER OF CREATION.	Location.	Area in Sq. Miles	Distinctive Characteristics.
Springs, 1832...	Middle Arkansas.....	1½	46 hot springs possessing curative properties.
owstone, 1872...	No'western Wyoming.	3,348	Geysers; boiling springs; mud volcanoes; petrified forests; Grand Canyon of the Yellowstone.
nola, 1890.....	Middle eastern California.	252	12,000 sequoia trees over 10 feet in diameter, some 25 to 36 feet in diameter; cave.
emite, 1890.....	Middle eastern California.	1,125	Valley of world-famed beauty; lofty cliffs; many waterfalls of extraord'y height; 3 groves of big trees.
eral Grant, 1890.	Mid. east'n California.	4	Created to preserve Gen. Grant Tree, 35 ft. in diam.
int Rainier, 1899	W. central Washington	324	28 glaciers; 48 sq. miles of glacier, 50 to 500 ft. thick.
ter Lake, 1902...	Southwestern Oregon..	249	Lake of extraordinary blue in crater of extinct volcano; sides 1,000 feet high; lava; fishing.
d Cave, 1903....	South Dakota.....	17	Miles of galleries and chambers containing peculiar formations.
t, 1904.....	Southern Oklahoma...	1½	Many sulph. and oth. springs possess. medicinal value.
ys Hill, 1904....	North Dakota.....	1⅛	An important wild animal preserve.
a Verde, 1906...	So'western Colorado..	77	Most notable, best preserved prehistoric cliff dwell'gs.
ier, 1910.....	No'western Montana..	1,534	250 glacier-fed lakes; 60 small glaciers; precipices thousands of feet deep.
ky Mount'n, 1915	North middle Colorado	397½	Heart of the Rockies; snowy range, peaks 11,000 to 14,250 feet altitude.
ail, 1916.....	Hawaii.....	118	Kilauea & Mauna Loa on Hawaii; Haleakala on Maui
en Volcano, 1916	Northern California...	124	Only active volcano in U. S. proper; hot springs; mud geysers.
McKinley, 1917	South central Alaska..	2,200	Highest mountain in North America.
nd Canyon, 1919	North central Arizona.	958	Greatest example of erosion in the world.
ayette, 1919.....	Maine coast.....	8	Group of granite mountains on Mt. Desert Island.
, 1919.....	Southwestern Utah...	120	Zion Canyon, 800 to 2,000 feet deep.

Hot Springs Reservation, Arkansas, has an area of 911.63 acres. There are 46 of the hot springs. They used for gout, rheumatism, malaria, alcoholism, drug addiction, etc.

There are also seven national military and other parks under the jurisdiction of the Secretary of War. y are as follows: Chickamauga and Chattanooga, Georgia and Tennessee; Shiloh, Tennessee; Gettys-, Pennsylvania; Vicksburg, Mississippi; Antietam Battlefield, Maryland; Lincoln's birthplace, Kentucky; ford Court House, North Carolina.

The Casa Grande Ruin, area 480 acres, is reached by the Southern Pacific Railroad. and by stage from ence, Arizona.

The national parks and reservations mentioned are under the supervision of the Secretary of the rior. Congress, by act of August 25, 1916, created a National Park Service, and placed the admin-tion of the national parks and monuments under the Department of the Interior in charge of a ctor of such service. General information, the annual administrative reports, copies of the rules and ulations, and compilations of the laws relating to the parks may be obtained from the Secretary of the rior, the Director of the National Park Service, Washington, D. C., or the superintendents of the parks.

OTHER NATIONAL MONUMENTS.

Under the Act of Congress, approved June 8, 1906, interdepartmental regulations governing the ex-tion, appropriation, etc., of prehistoric ruins or objects of antiquity have been promulgated by the etaries of the Interior, Agriculture, and War. Applications for permits to make excavations on the lic lands, Indian reservations, or the national monuments named below should be addressed to the etary of the Interior. The following have been preserved from entry and set aside as national mon-nts: Devils Tower, Wyoming; Montezuma Castle, Arizona; Petrified Forest, Arizona; El Morro, Mexico; Chaco Canyon, New Mexico; Muir Woods, California; Natural Bridges, Utah; Lewis and k Cavern, Montana; Tumacacori, Arizona; Navajo, Arizona; Shoshone Cavern, Wyoming; Gran vira, New Mexico; Katmai, Indian River, and Kasaan, Alaska; Rainbow Bridge, Utah; Pinnacles, Cali-ia; Colorado, Colorado; Papago Saguaro, Arizona; Capulin Mountain, New Mexico; Dinosaur, Utah; endrye, North Dakota; Casa Grande, Arizona; Scott's Bluff, Nebraska; Yucca House, Colorado.

Ten other national monuments within national forests have also been set aside under this act and ed under the jurisdiction of the Secretary of Agriculture, to whom inquiries in regard thereto should ddressed. Two other national monuments (Big Hole Battlefield, in Montana, and Cabrillo, in Cali-ia) are under the jurisdiction of the Secretary of War.

LIFE AND DEATH STRUGGLES OF TREES.

(By Chief U. S. Forester, H. S. Graves.)

A FOREST at maturity contains scarcely 5 per cent. of all the trees that have started life there. Yet death of the 95 per cent. is a necessary condition to the development of the others. The process of erentiation into dominant and suppressed trees takes place particularly in youth and gradually slows n toward maturity. Thus, in some natural pine forests, during the age between 20 and 80 years, over 0 trees on an acre die; whereas at the age between 80 and 100 years only 300 trees die. With some trees natural dying out with age proceeds faster than with others. Thus in pine, birch, aspen, and all other ies which demand a great deal of light, the death rate is enormous. With spruce, beech, fir, and species ch are satisfied with less light, this process is less energetic. The growing demand for space with age ndividual trees in a spruce forest may be expressed as follows, in square feet: at 20 years, 4; at 40 years, at 60 years, 70; at 80 years, 110; at 100 years, 150. If we take the space required by a pine at the between 40 and 50 years as 100, then for spruce at the same age it will be 87, for beech 79, and for 3. This process of differentiation is universal in forests everywhere.

Another peculiarity that marks a tree community is the difference in seed production of trees which oc-y different positions in the stand. Thus, if the trees in a forest are divided into five classes according heir height and crown development, and if the seed production of the most dominant class is desig-d as 100, the seed production for trees of the second class will be 88, for the third class 33, for the fourth s only 0.5 per cent.; while the trees of the fifth class will not produce a single seed, although the age ll these trees may be practically the same.

The world's production of wool averages about 2,800,000,000 pounds, of which 570,000,000 po comes from Australia, 400,000,000 from South America. 380,000,000 from Russia; 300,000,000 from the

The number of woollen mills in the United States exceeds 1,000, and there are about 80,000 lo over 8,000 of which are used in making carpets and rugs. The number of active spinning spindles ex 4,000,000, pretty evenly divided between woollens and worsteds. There are usually from 250,000 to 000 idle spindles.

The production of cotton seed in 1920 was approximately 5,778,000 tons.

The world's production of raw cotton in 1920-21 is estimated at 19,595,000 bales of 500 lbs. gross, 478 lbs. net, by the U. S. Dept. of Agriculture. United States, 13,366,000; India, 2,976,000; Egypt, 1,000; China, 1,000,000; Russia, 180,000; Brazil, 100,000; Mexico, 165,000; Peru, 157,000, and all er countries, 400,000 bales. A normal world crop is about 22,000,000 bales.

There are about 152,000,000 cotton spinning spindles in the world, of which 130,000,000 are actively at k, as a rule.

The periods relate to years ended June 30. Data relate to United States as a whole. Figures hyphenated periods are yearly averages. Production (if any) for non-contiguous territory is lacking

Chocolate is prepared from the ground seeds of the fruit of the cocoa palm. Cocoa nibs consis these seeds, which are about the size of almonds, roughly broken, while chocolate contains a substan theobromine—very similar to but not identical with theine or caffeine; its other constituents give it a different position in the class of foods. The cocoa seeds contain from 45 to 49 per cent. of fat and f 14 to 18 per cent. of nitrogenous matter.

COCOA TRADE OF THE UNITED STATES.

The United States is the world's largest consumer of crude cocoa, having taken in 1918 about 50 cent. of the total world production of 386,000 tons. The imports of crude cocoa into this country for fiscal year ended June 30, 1919, were 313,037,419 pounds, valued at $35,953,990, a falling off of 21.6 cent. in quantity and of 12.9 per cent. in value from the high record of 1918. Of this amount there w exported 32,709,845 pounds, valued at $5,683,447, making the apparent consumption of crude co in the United States approximately 280,000,000 pounds, as against 386,000,000 pounds in 1918. N withstanding this decrease in available supplies of raw material exports of prepared cocoa and chocol (not including confectionery) rose from about $6,000,000 in 1918 to $11,000,000 in 1919.

WHAT AMERICANS DRINK.

[SOURCE—The data as to the domestic wines have been estimated by the Department of Agriculture, J. W. Schopp of Bonfort's Wine and Spirit Circular (Inc.), New York, and others. The data as to domestic spirituous and malt liquors have been derived from the reports of the Commissioner of Internal Revenue. The table does not include for any year withdrawals of distilled spirits for scientific purposes and use of the United States, or since 1906 withdrawals for denaturation, free of tax.]

NOTE—Owing to changes in the internal revenue laws, spirits distilled from fruits cannot be separately ted since 1918.

Consumption per capita in gallons: Distilled spirits (1850), 2.24; (1900), 1.28; (1917), 1.60; (1918), ; (1919), 0.80; (1920), 0.26. Wines (1850), 0.27; (1900), 0.39; (1917), 0.41; (1918), 0.49; (1919), 0.51; 20), 0.12. Malt liquors (1850), 1.58; (1900), 16.09; (1917), 17.95; (1918), 14.59; (1919), 8.03; (1920), . Total for all kinds (1850), 4.08; (1900), 17.76; (1917), 19.95; (1918), 15.95; (1919), 9.34; (1920), 3.01.

According to Section 3,249, United States Revised Statutes, "proof spirits shall be held to be that holic liquor which contains one-half its volume of alcohol of a specific gravity of 0.7939 at 60° Fahren-." The official gallon prescribed is one containing 231 cubic inches, or 58.372.2 grains, equal to 8.3389 nds of distilled water at its maximum density, weighed in air of temperature of 62° Fahrenheit and ometric pressure of 30 inches. The taxable gallon differs from the proof gallon by reason of the fact t in computing taxable gallons under Section 3,251, Revised Statutes, all fractional parts of a gallon than one-tenth are excluded.

REAL BEER BREWED IN THE UNITED STATES, FISCAL YEARS.

(Barrels of not more than 31 gallons.)

The brew in 1913 was 65,324,876 barrels; (1914) 66,189,473; (1915) 50,808,210; (1916) 58,633,624. ese include the usual withdrawals for export.

HOW TO KEEP SOBER. UNITED STATES GOVERNMENT RECIPE.

SWEET cider or grape juice can be preserved in a sweet condition indefinitely by the directions furnishe by specialists in the Bureau of Plant Industry, United States Department of Agriculture.

As rapidly as the juices are pressed from the fruit place them in clean vessels. Wooden barrels or tul which have previously been thoroughly scalded will serve the purpose very well, although earthenwa jars, if available, should be used. These are allowed to stand over night, or for not more than 12 to 1 hours, in the coolest location possible, so that much of the solid matter suspended in the juice will settle t the bottom. Glass jars or bottles must be thoroughly sterilized to receive the juices, which are draine off without disturbing the sediment.

If fruit jars are used, they should be fitted with sterilized caps and rubbers and the cap tightened dow as far as it can be turned. If bottles using crown caps are used, the bottles are capped as they are fille using caps which have been sterilized. In case bottles closed with corks are used, set the previously steriliz corks in place in the bottles and tie them down loosely with strong cord so the steam may escape. T relieve the pressure during sterilization the bottles should be filled only to the neck.

A wash boiler or other convenient vessel can be prepared for a "water bath" by fitting it with a woode rack on which the containers, filled with juice as above indicated, are placed. The bath is filled with co water and the bottles or jars, if closed, are inverted or laid on one side so as to wet the inside of the ca thoroughly with juice. If bottles closed with corks are used, the bottles must stand upright in the wate which should come up to the necks of the bottles.

The heating is then started. A thermometer is hung so that it will dip for half its length into the wate which is heated gradually until its temperature reaches 175° F. Allow the bottles or jars to remain the water for 30 minutes if quart or half-gallon jars are used, and from 40 to 45 minutes if gallon bottl are used. Then remove from the stove and immediately tighten down the caps of the jars, if jars are use If corked bottles are used, drive the corks firmly into the necks; invert each bottle so as to wet the co thoroughly with the hot juice; then complete the sealing by cutting the cork off smoothly and pouring h paraffin over it.

Place the product in a dark, cool storage room. Watch it for a period of a week or more for the begi ning of fermentation, which will be indicated by frothing at the surface of the liquid. If any bottles sho signs of fermenting, return them to the wash boiler and repeat the process exactly as before, loosening t tops, of course, before heating begins, and closing down firmly again before the liquid is allowed to co

When the juice is placed in storage the suspended solid matter will gradually settle out and sedime will accumulate in the bottom and on the sides of the jars. In the course of two or three months at ordina temperatures, this settling will be completed and the liquid will be fairly clear. It may be used direct from the bottles or drawn off into clean bottles, which should be sterilized before they are filled and whi should then be corked and pasteurized by heating to 170° F. for the same length of time as in the first pa teurization. If rebottling is necessary or desirable, the second heating should never reach the tempe ture to which the juice was first heated, otherwise the clarification which is secured by settling and decanti into new containers will be defeated, as a second process of sedimentation will occur. If the temperatu be kept 5° below that reached at the first heating, this result will be avoided.

A reliable thermometer is a necessity for this work, as it is important that the juice be heated to 175° in the first heating, in order to destroy the organisms which would otherwise cause fermentation. It equally important that the juice should not be overheated, as this will give it a cooked taste, which is c cidedly unpleasant to many people.

In the year ended June 30, 1920, there were produced in the United States 80,682,241 tax gallons distilled spirits other than fruit brandies; 33,921,891 gallons were withdrawn from warehouses for exp and 53,406,460 gallons remained in the warehouses.

Exports from the United States in tax-gallons, in year ended June 30, were: Whiskey, 5,488,375; , 152,578; gin, 474,386; alcohol, 26,315,443 (exclusive of 3,910,241 proof gallons of industrial alcohol); ral or cologne spirits, 1,502,667; total 33,933,448.

WASHINGTON'S RECIPE FOR MAKING BEER.

To MAKE SMALL BEER Take a large siffer full of bran hops to your taste, boil these three hours, then n out thirty gallons into a cooler, put in three gallons molasses while the beer is scalding hot or rather y the molasses into the cooler and strain the beer on it while boiling hot; let this stand till it is little more blood warm, then put in a quart of yeast. If the weather is very cold cover it over with a blanket and t work in the cooler twenty-four hours, then put it into the cask; leave the bung open till it is almost e working. Bottle it that day week it was brewed.

The American production is of the season preceding the fiscal year. The export figures relate to Continental United States after 1900. The beet sugar production figures, 1865-1872 and 1875-1879, are averages.

The 1920-21 sugar crop of the world (grown and ground late in 1920, marketed early in 1921) is estimated by Willett and Gray at 16,441,051 long tons; of which 969,419 tons was U. S. beet sugar; 150,996 tons Louisiana cane sugar; 6,238 was Texas cane sugar; and 3,900,000 was Cuba cane sugar.

The 1921-1922 U. S. beet sugar crop is estimated (Oct. 14, 1921) at about 900,000 long tons; Louisiana cane sugar, at 198,000 tons; Hawaii cane sugar, 525,000 tons; Philippine cane sugar, 200,000 tons; Porto Rico cane sugar, 420,000 tons. The area in sugar cane in Cuba in the fall of 1921 was as great as in 1920, when 4,000,000 tons of sugar was produced for export; but how much of this vast crop is ground into sugar for export depends on financial conditions. When the cane was planted the prospect was for a fairly high price for sugar, but later the price dropped, causing serious money troubles to the growers and the banks.

The 1921-1922 sugar cane crop of the world will approximate that of 1920-1921; how much of the cane is ground, not only in Cuba but elsewhere, will depend on the price.

Of the cane sugar imported into the United States in the year ending June 30, 1921, Cuba sent 378,-9,386 pounds; Philippines, 44,318,801; Hawaii, 977,738,902; Porto Rico, 818,043,880; Central America, 29,101; Dominica, 13,651,290; Peru, 17,751,117; other South America, 30,166,007; other countries not ready named, 168,889,421 pounds.

Maple sugar production in 1920 in the United States was estimated by the Department of Agriculture at 36,373,080 pounds, obtained by tapping 19,031,325 trees.

Under the Internal Revenue regulations, every cigar manufacturer in the United States is entitled give to each cigar maker three cigars a day, all of which are tax free. In the year ended Dec. 31, 1919, number of these tax-free cigars made in the United States was 27,108,232, of which 3,669,617 were repor as given away by cigar factories in New York State to their employees.

In 1919 there were 1,871 registered tobacco manufacturers in the country, of whom 1,356 were mak smoking tobacco; 40, perique; 33, snuff; 19, twist; 9, plug; 86, two or more kinds; 5, old stock; 323, ref and scraps.

In 1919 there were 11,720 registered cigar manufacturers, of whom 11,479 made "large" cigars (wei ing more than 3 lbs. per 1,000); 9 made "small" cigars; 135 made "small" cigarettes (weighing less tha lbs. per 1,000); and the rest made cigarettes and cigars of both classes.

Of the cigars made 7,072,357,021 were "large," and 713,233,370 were "small;" of the cigarettes, 8 888,910 were "large," and 53,119,784,232 were "small."

The above table does not include the comparatively small number of cigars made in bonded wa houses, mostly in Florida, from imported tobacco, the tax on which amounted in 1919 to $459,452.

Hudson River shad fishery (1919) 374,974 lbs. ($83,724).

The Pacific Coast salmon pack in 1920 was 6,289,321 cases, of which 3,313,960 cases was of pink, humpback, and chum, and 2,255,230 cases was sockeye Of the total pack 4,395,937 cases came from Alaska, $87,616 from British Columbia, 166,520 from Puget Sound, and 481,545 from Columbia River.

The Alaska salmon pack of 1920 was valued at $37,050,212. It weighed 211,004,976 pounds.

Fish landed at Boston and Gloucester, Mass. (1919) 196,481,270 lbs. ($7,548,383).

Catch of cod on Pacific Coast (1920) 3,190,975.

The U. S. Bureau of Fisheries, in 1920, distributed 630,749,305 fish eggs; 3,872,218,350 small fry; 1 267,388,065 fingerlings and yearlings. Chief varieties were: flounder, cod, pollach, whitefish, haddock, e, perch, buffalo fish and cisco.

PRODUCTION OF FISH AND OTHER NON-MINERAL OILS IN U. S., 1918 (POUNDS.)

Cod and liver, 712,000; lard, 1,008,757; bone, 24,817,000; garbage, 53,476,000; oleo, 145,929,000; tal-, 304,891,000; cocoanut, 341,235,000; cottonseed, 1,283,823,000; linseed, 375,452,000; peanut, 95,394,-; butter fat, 1,446,492,000; others and total, 5,594,172,000.

Included in above total, in 1918, were 8,803,574 gallons of fish oil, as follows—menhaden, 3,676,453; ale, 3,073,574; sperm, 416,737; herring, 380,379; other fish, excluding cod and liver, 1,060,322. A gallon fish oil averages 7½ lbs.

More than three billion oysters were taken in 1920 in the United States.

NATIONAL GEOGRAPHIC SOCIETY.

(By the President, Gilbert B. Grosvenor.)

FOUNDED in 1889, "for the increase and diffusion of geographic knowledge," the National Geographic Society has filled such an important rôle in the encouragement of science and its application to the needs of mankind that its membership now exceeds 750,000. In the promotion of its work of increasing geographic knowledge the society pioneered in the study of Alaska and the encouragement of the opening up of that territory; supported Peary in his Polar work; investigated the problems of vulcanism and seismology at Mont Pelée, Messina and in Alaska; explored the ruins of the Inca country of the high Andes, unearthing its Holy City, Machu Picchu, and the staircase farms of the Incas, which far eclipse the Hanging Gardens of Babylon; studied the history of the Ice Age, as exemplified in the glaciers of Alaska; discovered the Valley of the Ten Thousand Smokes.

In its recognition of the services to mankind of those who labor to push back the horizons of geography, the society has awarded the Hubbard Gold Medal to Peary for his furthest north in 1906; to Amundsen for achieving the Northwest Passage and locating the North Magnetic Pole; to Gilbert for his physiographic researches; to Shackleton for his Antarctic explorations; and to Stefansson for his discovery of a hundred thousand square miles of territory in the Canadian Arctic. It also awarded special gold medals to Peary and Amundsen for their attainment of the North and South Poles respectively; and to Gen. George W. Goethals in recognition of his service to the world in the building of the Panama Canal. In its work of diffusing geographic knowledge the society relies principally on its leading publication, the National Geographic Magazine. This magazine contains some 1,400 pages of text and illustrations in the twelve numbers of each year. Some of these numbers are monographic, and have become the recognized handbook on the subjects with which they deal—like Nelson's Larger and Smaller Mammals of North America, McCandless and Grosvenor's Flag Number, Baynes and Fuertes's Dog Number, and Wyllie's Romance of Military Insignia.

Through the columns of more than 500 leading American daily newspapers and the large plate-matter syndicates, the society's geographic news bulletins are reaching into more than half the homes of the United States. These bulletins are furnished gratis to the press, and through them the society is able to interpret the geographic and historical backgrounds that give significance to the news despatches from every corner of the globe. The United States Bureau of Education, in its promotion of the intelligent study of current events in the schools of the country, is co-operating with the society in placing illustrated editions of these bulletins in the hands of the teachers of the United States. Many State Superintendents have requested that they be furnished to every teacher in their jurisdiction.

A further educational activity undertaken by the society in recent months is its Pictorial Geography. By means of a continuing series of loose leaf geographic text and pictures, prepared in recognition of the fact that the average map and the technical phraseology of geographies mean little to children, the society is aiming to bring them mental pictures of busy places, living peoples and beautiful landscapes, and to portray to them nature's moods and processes in terms they understand and forms they enjoy. Another activity of the society in the diffusion of geographic knowledge is the publication of books, maps and monographs on subjects of first interest. Its map of the war zone in France was readily used by American officers at home and abroad; and the War Department has adopted its map of Mexico as the base for the Army's military map of that turbulent country. In 1917 the society appropriated $20,000 and in 1920 $13,500 out of its reserve fund, the money necessary to save from destruction the privately owned "Big Trees" in Sequoia National Park, California, and had the ground they occupy deeded in perpetuity to the United States for the benefit of posterity.

For a review of the society's scientific work in the past year reference is made to the article on "Scientific Progress in 1921," elsewhere in this Almanac. The officers and editorial staff are: *President and Editor*—Gilbert Grosvenor. *Vice-President*—Henry White. *Vice-Director and Associate Editor*—John Oliver La Gorce. *Secretary*—O. P. Austin. *Associate Secretary*—George W. Hitchison. *Treasurer*—John Joy Edson. *Asst. Editors*—William J. Showalter, and Ralph A. Graves. *Chief of School Service*—J. R. Hildebrand.

THE PARTHENON.

THIS Doric temple of white marble, erected in honor of Minerva (Athene Pallas), the tutelar deity of Athens, was completed 438 B. C., sixteen years after its commencement. The temple was built during the administration of Pericles, who employed Callicrates and Ictinus as architects under the direction of Phidias, to whom he intrusted all works of magnificence and who embellished it with statues and bas-reliefs. It was 227 feet long, 101 wide, and 65 in height, with 8 pillars front and back, and 17 on each side; these pillars were 42 feet nigh and 17½ in circumference, the distance between them being 7 feet 4 inches.

The Frieze of the Parthenon.

This frieze, in low relief, ran around the top of the inner faces of the colonnade and outer wall of the cella of the temple, yet within and below the roof. As the entablature above the outer columns descended below the lower edge of the frieze as it was placed on the wall, the frieze could only receive its light diffused between the columns and reflected upward from the pavement of the colonnade. Owing to this circumstance, as well as to the peculiar position of the spectator when looking at the frieze, standing within the columns, the artist was forced to keep his relief very flat, so that it only rises 1¾ inches from the background, and at the highest point 2¼ inches; moreover, it is owing to these circumstances that the relief was kept lowest in the lower parts of the frieze and highest in the upper parts, where even sometimes the background is sunk to gain a boider relief. The frieze was over 522 feet in length, running around the four sides of the temple.

VENUS de MILO.

The original statue was discovered in 1820 by a peasant, in a grotto about 500 yards from the ancient theatre of the town of Melos, in the island of the same name. From its shape and character, the grotto is supposed to have been a grave in which the statue was hidden. It was bought for the sum of 6,000 francs by M. de Marcellas for the Marquis de Riviere, then French Ambassador to the Porte. It was carried to Paris in February, 1821, and presented by Riviere to Louis XVIII. It now stands in the Louvre, the pride of Paris and the admiration of the world. Its sculptor is unknown, but by the grandeur of its style it is justly assigned to the era between Phidias and Praxiteles, and is considered the greatest statue of woman's form the world now holds. The plinth, the tip of the nose, and a small part of the lips are the only parts restored. Parts of an arm and hand were also found, but so mutilated that, though casts nave been taken with them attached, the torso is declared by the world better as it is—the fulness of what is left, and its suggested action, being more satisfactory than any guesswork from an uninspired hand.

The Venus of Capua in the Museo Bourbonico, Naples, is like the Venus of Melos in general form, but has the head bent down and the left arm and empty hand extended toward a Cupid, who, with his bow, stands before her. It is believed to be a modified copy of the latter.

ART COLLECTIONS AND THE WORLD WAR.

The world war played havoc with art collections in Belgium, the invaded regions of Northern France, Poland, Austria, Italy, Russia, and other European countries. War taxes followed in the wake and caused the dispersion of many collections of pictures and other art objects in England, Germany, Russia, Italy, France, Spain, Austria and Hungary.

TELESCOPES.

THE magnifying power of telescopes is generally expressed in diameters, the practical limit of powe being 100 diameters per inch of diameter of the telescope. Thus the 36 inch telescope at the Lick Observa tory may give a magnifying power of 3,600 diameters. But such high power can only be used in a ver clear atmosphere, and consequently most astronomical observations are made at 1,000 diameters.

The largest refracting telescopes in the world are in the United States. The one at Yerkes Observatory Geneva Lake, Wis., has an object lens 40 inches in diameter, with a focal length of 64 feet. The movabl part of the instrument turning on the polar axis weighs about 12 tons, and the clock 1½ tons. Other larg telescopes are the 36-inch at Lick Observatory, Mt. Hamilton, Cal., where many important astronomica discoveries have been made; the 26-inch at the U. S. Observatory, Washington, D. C., and the 24-inch (photographic objective) belonging to Harvard University. There is a 30-inch refracting telescope at the Allegheny Observatory, Riverview Park, Pa.

Abroad is the 30-inch at the Imperial Observatory, Pulkova (near Petrograd), Russia. This telescop has a platform at the lower end of the polar axis, from which observers can readily operate the instrument The Meudon Observatory (near Paris, France) has a 32-inch, the Potsdam, Prussia, a 31-inch, and th Royal Observatory, at Greenwich, England, a 28-inch. There is a 32-inch at the Nikolaieff Observator of Russia.

Two of the most perfect reflecting telescope instruments ever built are at Mt. Wilson Observatory Pasadena, Cal. One mirror is silver on glass, 60 inches in diameter, and weighs nearly a ton. The telescop is moved by electric motors in right ascension and declination. An important feature in this instrumen is the different focal lengths that can be obtained. The 60-inch mirror has a 25-foot focus, but by a suitabl arrangement of mirrors it is possible to get focal lengths of 80, 100 and 150 feet. At the same observator is a 100-inch reflector; the tube with the mirror at the bottom is 43 feet long, and with the mountings weigh nearly 20 tons. There is a 36-inch reflector at Lick Observatory, Harvard University has a 28-inch and a 60-inch, and at the Yerkes Observatory is a 24-inch. Other notable reflectors are the Lord Rosse, at Bir Castle, Ireland, which has a mirror 72 inches in diameter of speculum metal and a focal length of 64 feet a 48-inch at Melbourne, Australia; a 60-inch at Ealing, England; a 48-inch at Paris, France, and a 39-inch at Meudon, France. The new 61-inch reflecting telescope at the National Astronomic Observatory, Cordoba Argentina, is claimed to be the most powerful reflector in the Southern Hemisphere and the third most power ful in the world. The Dominion Astronomical Observatory, Victoria, B. C., Canada, has a 72-inch reflector

THE FRANKLIN INSTITUTE OF THE STATE OF PENNSYLVANIA.

(15 South Seventh Street, Philadelphia, Pa.)

THE Franklin Institute of the State of Pennsylvania for the Promotion of the Mechanic Arts was or ganized in the year 1824, to meet a demand in America for an institution similar to that founded by Coun Rumford in London in 1799. The founders intended it not only as an appropriate memorial to the nam of Franklin, but as a means of continuing for all time a work which throughout his long life he perhaps re garded as his best, namely the discovery of physical and natural laws and their application to increase th well-being and comfort of mankind. Membership, 1,500.

Weekly lectures on scientific and technical subjects are given throughout the winter season; the Journa of the Franklin Institute has been published monthly since 1826; monthly meetings are held at which re discoveries in physical science and important engineering achievements are discussed, and major invention described The Committee on Science and the Arts examines and makes reports upon all new and usefu machines, inventions and discoveries submitted to it. The membership is divided into the following sec tions, each group devoting its attention to the branch of technology for which it is organized: Chemistry Electricity, Mining, Metallurgy, Astronomy, Photography, Physics, and Engineering.

Library.—74,668 volumes, 16,597 pamphlets, 2,292 maps and charts, and 1,349 photographs. Com plete sets of over 600 of the leading scientific and technical publications of the world.

INDEPENDENCE HALL NATIONAL MUSEUM, PHILADELPHIA.

(Data Supplied by Wilfred Jordan, the Curator.)

INDEPENDENCE HALL was at first called "The State House of Pennsylvania." It now comprises the main or central building (Independence Hall), two arcades connecting it with two two-story buildings called the Wings, and two separate corner buildings one, Congress Hall, the other, Old City Hall, one on the corner of Fifth Street and the other on the corner of Sixth Street, facing on Chestnut Street, Philadelphia The State House group of buildings was designed and built by Andrew Hamilton, a Philadelphia lawyer, who bought the land, for which he created a trust. Congress and City Hall were in Hamilton's original scheme of the State House group, but were not built until after the close of the Revolution. The group of buildings covers a frontage of 396 feet on Chestnut Street.

The original building (Independence Hall) in the group was begun in 1732 and was opened and first put to use in September, 1736, when William Allen, Mayor and prominent merchant of Philadelphia, gave a dinner to the citizens. In October, 1736, the Legislature, of which Benjamin Franklin was clerk, moved into the completed part of the structure, then known as the "East Room." In June, 1753, Pass & Stow placed in position in the State House steeple the Liberty Bell, weighing 2,080 pounds. In 1752 a clock was ordered, and in 1759 it was placed and paid for. The State House was practically completed in the latter year. Here are some of the historical events that have taken place in Independence Hall:

June 15, 1775, Washington accepted his appointment as General of the Continental Army.

July 4, 1776, Colonies issued the Declaration of Independence.

July 15, 1776, convention to form a new Constitution for Pennsylvania met here.

September 11 and October 4, 1777, American officers captured at the Battles of Brandywine and Germantown were held prisoners in the building by the British.

Congress, which had left Philadelphia in September, 1777, and which convened in Independence Hall March 4, 1777, left again on September 18, 1777; returned July 2, 1778, and continued to sit there until the close of the Revolution.

July 9, 1778, the Articles of Federation and Union between the States were signed in Declaration Chamber by eight States. The five remaining States signed later, the last, Maryland, on March 1, 1781.

May 14, 1787, the Federal Convention to frame a Constitution for the United States assembled, sitting until September.

December 13, 1787, the Pennsylvania Convention met to ratify the Philadelphia Constitution.

In 1824 Lafayette was given a reception there.

December 6, 1790, the Congress of the United States occupied the County Building, now known as Congress Hall, one of the Independence Hall group, and remained there until the seat of Government was removed to Washington in 1800.

March 4, 1793, George Washington was inaugurated in Congress Hall, at the beginning of his second

term as President; and John Adams was inaugurated there March 4, 1797. The House of Representatives occupied the lower floor and the Senate the second floor.

February 7, 1791, the Supreme Court of the United States held its first session on the second floor of the City Building, now known as Old City Hall, one of the Independence Hall group, and stayed there until August 15, 1800. The Supreme Court of Pennsylvania sat on the second floor of the building also. The City Building was used as the municipal headquarters until March 27, 1895.

In 1816 the City of Philadelphia bought the entire property.

There are many historic oil portraits in the National Portrait Gallery, including Washington and other early American public men.

Independence Hall was formally thrown open as a public historical museum July 4, 1876, although parts of this building were used as a museum as early as 1790. Cost of its annual upkeep is $25,000. Its art collection, made up in the main of original pictures of celebrities of Colonial and Revolutionary times, is worth over $500,000. The museum collection consists of furniture, manuscripts, musical instruments, water colors, missiles, maps, coins, currency, weapons, metals, prints, wearing apparel, utensils, and books.

There are no pay days. The National Museum is open to the public daily throughout the year, from 9 A. M. to 4 P. M., Sundays, 1 to 4 P. M., except Christmas and Thanksgiving. The National Museum, Independence Hall group, is located on the south side of Chestnut Street, between Fifth and Sixth Streets, and can be reached from the central hotel district and the railroad stations by trolleys or subway trains. A series of free bulletins are issued, which will be mailed upon request.

THE LIBRARY OF CONGRESS.

THE Library of Congress was established in 1800, destroyed in 1814 by the burning of the Capitol, afterward replenished by the purchase by Congress of the library of ex-President Jefferson, 6,760 volumes (cost, $23,950); in 1851, 35,000 volumes destroyed by fire; in 1852, partially replenished by an appropriation of $75,000; increased (1) by regular appropriations by Congress; (2) by deposits under the Copyright Law; (3) by gifts and exchanges; (4) by the exchanges of the Smithsonian Institution, the library of which (40,000 volumes) was, in 1866, deposited in the Library of Congress with the stipulation that future accessions should follow it. One hundred sets of Government publications are at the disposal of the Librarian of Congress for exchange, through the Smithsonian, with foreign Governments, and from this source are received about 12,000 volumes annually. Other special accessions have been: The Peter Force collection (22,529 volumes, 37,000 pamphlets), purchased 1867, cost $100,000; the Count de Rochambeau collection (manuscript), purchased 1883, cost $20,000; the Toner collection (24,484 volumes, numerous pamphlets), gift in 1882 of Dr. Joseph M. Toner; the Hubbard collection (engravings).

The collection is now the largest in the Western Hemisphere, and third in the world. It comprises over 2,831,333 printed books and pamphlets (including the law library which, while a division of the Library of Congress, still remains at the Capitol), maps, and charts, pieces of music, and photographs, prints, engravings and lithographs numbering about a million.

The collection is rich in history, political science, in official documents, National, State, and foreign, and in Americana, including important files of American newspapers and original manuscripts (Colonial, Revolutionary, and formative periods). Many of the rare books and manuscripts belonging to the library are exhibited in show cases on the second floor.

Among the special book collections are the Yudin, of Russian literature (80,000 volumes); the Schiff, of Judaica (about 20,000); the Weber, of Indica; the Huitfeld-Kaas (Scandinavian); the John Boyd Thacher of Incunabula (930 tities). The Orientalia include some 5,000 volumes (fascicules) of Japanese books and about 40,000 volumes (fascicules) of Chinese. The Division of Prints includes certain collections given or lent, besides a large mass of material received by copyright and some by purchase. The manuscript collections are especially noteworthy for material on American history, some of the most distinguished of which has been received by transfer from the executive departments, the library being now regarded as the main custodian of the historical archive material in the possession of the Government. It has the papers of nine Presidents and of various American statesmen, Franklin, Morris, Hamilton, &c.

The library is copying largely documents in foreign archive offices, and other institutions, of concern to American history. It has already a large body of transcripts from such sources. This policy of transcribing and copying, where necessary by facsimile, is applied also to maps and to music. Through it, the collection of music, in bulk one of the largest in the world, is especially strengthened in full scores of orchestral and operatic music.

In 1897 the main collection was removed from the Capitol to the building erected for it under the Acts of Congress approved April 15, 1886, October 2, 1888, and March 2, 1889, at a cost of $6,347,000 (limit by law, $6,500,000), exclusive of the land, which cost $585,000. The architects who furnished the original designs were John L. Smithmeyer and Paul J. Pelz. By the act of October 2, 1888, before the foundations were laid, Thomas L. Casey, Chief of Engineers of the Army, was placed in charge of the construction of the building, and the architectural details were worked out by Paul J. Pelz and Edward P. Casey. Upon the death of Gen. Casey, in March, 1896, the entire charge of the construction devolved upon Bernard R. Green, Gen. Casey's assistant, and under his superintendence the building was completed in February, 1897, opened to the public November, 1897. The building occupies three and three-quarter acres upon a site ten acres in extent at a distance of 1,270 feet east of the Capitol, and is the largest and most magnificent library building in the world. In the decorations some forty painters and sculptors are represented by all American citizens. The floor space is 326,195 square feet, or nearly eight acres. The book stacks, including the new stack built over the southeast interior court, contain about 100 miles of shelving, affording space for 3,540,000 octavo volumes and 84,000 volumes of newspapers.

The library is maintained by annual appropriations by Congress for various purposes, including the purchase of books. Total appropriation for 1921, $719,025. For service and contingent expenses, $486,480; purchase of books, $98,000; building and grounds, $134,545.

Library Service—Library proper, 266 employés; copyright, 91; distribution of cards, 48; legislative reference, 21. Total, 426. By virtue of the act of 1897, employés in the library proper are appointed by the Librarian of Congress, "solely with reference to their fitness for their particular duties." Custody and care of the building is under the Superintendent of the Library Building and Grounds, who is also the disbursing officer and appoints the 147 employés of his office.

Entitled by statute to draw books for home use are various officials at Washington. In addition, special permits are freely issued by the Librarian to persons engaged in research.

Inter-Library Loans—While not a lending library, but primarily a reference library, the Library of Congress maintains an inter-library loan system by which special service is rendered to scholarship by the loan to other libraries for the use of investigators engaged in serious research of books which it is not within the power or duty of the library in question to supply and which at the time are not needed in Washington.

Copyright Office—The Copyright Office is a distinct division of the Library of Congress, and is located in the ground floor, south side; open 9 to 4.30. It is under the immediate charge of the Register of Copyrights, who, by the acts of February 19, 1897, and March 4, 1909, is authorized "under the direction and supervision of the Librarian of Congress" to perform all the duties relating to copyrights. Copyright registration was transferred to the Librarian of Congress by the act of July 8, 1870. Of most articles copyrighted two copies, and of some one copy, must be deposited in the Library of Congress to perfect copyright.

Hours—The library building is open to the public all days in the year excepting 4th of July a Christmas. The hours are from 9 A. M. to 10 P. M. week days, from 2 P. M. to 10 P. M. Sundays and holida and 9 A. M. to 1 P. M. on Saturdays from June 15 to September 15.

Librarians Since the Inception of the Library—1800-1814, the Clerk of the House of Representativ (for the time being); 1815-1829, George Watterston; 1829-1861, John S. Meehan; 1861-1864, John G. Step enson; 1864-1897 (June 30), Ainsworth R. Spofford; 1897-January 17, 1899, John Russell Young; 18 (April 5), Herbert Putnam.

THE ART INSTITUTE OF CHICAGO.

THE Institute is on the lake front at the foot of Adams Street, facing Michigan Avenue. Buildi constructed of Bedford limestone in Italian Renaissance style, 320 feet long with 120,000 square feet floor space. The Institute has about 150 galleries, school rooms, offices and studios; also Fullerton (l ture) Hall, with seating capacity of 500; the Burnham Library of 2,500 volumes on architectural subje and the Ryerson Library, 14,000 volumes on art, one of the few libraries in the world devoted exclusive to art. During the fall, winter and spring months 80 to 100 lectures on art and related subjects are giv in Fullerton Hall, also an orchestra concert each Sunday afternoon and evening, and occasionally a pagea or dramatic presentation.

The Museum contains more than 1,800 paintings, 1,000 casts of sculpture, 100 original marble statu and fragments of all periods, 3,500 prints, etchings, engravings and lithographs, 1,500 textiles of ancie and modern times, Peruvian and Egyptian to the Eighteenth Century, and extensive collections of p teries, porcelains, china, etc., a great part of the last named being assembled in Gunsaulus Hall, amo them the Blanxius collection of English potteries and porcelains, one of the finest extant. The Institu was incorporated in 1879 and achieved international importance with the purchase of fifteen old Dut Masters of the Demidoff collection, in 1890. These paintings with other important canvases of their sch hang in the Charles Lawrence Hutchinson Gallery of Old Masters, named in honor of Mr. Hutchins who has been president of the Institute for nearly forty years Rembrandt, Rubens, Van Dyck, H Holbein, Hobbema, Von Ostade, Terburg, Jan Steen, Teniers, Ruysdael, Van de Velde are represent in this gallery. The Henry Field, A. A. Munger and Nickerson memorial collections include painters the Barbizon school and the earlier American painters of landscape and figures.

Modern American art is chiefly represented in the collection now numbering nearly one hundred ca vases and other works presented by The Friends of American Art. One of the features of the Institu is the series of temporary exhibitions of paintings, sculpture, architecture and applied arts which are he during the year. Annual and special exhibitions and collections of various kinds from America and abro to the number of six to ten at a given time keep the constituency of the Art Institute aware of curre achievement in art. Attendance in 1920, 1,040,000. Free days for public—Wednesdays, Saturda; Sundays and public holidays. The Institute's sources of income are bequests, gifts, membership du (total paid membership, April 1, 1921, 13,300), income from its endowment of about $3,000,000 both r stricted and free, and a small tax from the South Park Board of the City of Chicago. The building h a value between a million and a half and two million dollars. The collections have a commercial wor far beyond five million dollars. The Art School of the Institute has an annual attendance of about 3,0 students; often referred to as the largest art school in the world. It has a faculty of about two sc teachers and instructors.

THE CLEVELAND MUSEUM OF ART.

THE Cleveland Museum of Art, incorporated in 1913, was opened to the public on June 6, 1916. is situated in Wade Park on land given by J. H. Wade. The building cost about $1,250,000, was ma possible through the wills of John Huntington and Horace Kelley, and the main income is derived fr The John Huntington Art & Polytechnic Trust and The Horace Kelley Art Foundation. The Muse is open free on Sundays, Wednesdays, Saturdays and holidays, an admission fee of twenty-five cents bei charged on other days. The hours on Sunday are 1 to 10 P. M., on Wednesday, 9 A. M. to 10 P. M., a on other week days and holidays, 9 A. M. to 5 P. M. The membership is approximately 5,000.

Exhibition space comprises a central rotunda opening on one side into the Court of Tapestries a Armor, and on the other into the Garden Court, and around these as a central axis are arranged fourte exhibition galleries. The collection of American Colonial art was installed in a gallery directly oppos the main entrance so that the first emphasis for the entering visitor might be on the artistic producti of our own country. This has been of aid in developing in the foreign-born visitor the realization of Americ traditional and cultural background. The Court of Tapestries and Armor houses an important and striki collection of arms and armor, and a series of eight tapestries depicting the story of Dido and Aeneas. T Museum is especially rich in its oriental collections, and has developed other important groups illustrati the art of various countries from ancient to modern times. They include painting, sculpture, furnitu tapestries, decorative arts, prints, etc.

The educational work of The Cleveland Museum of Art is being developed along various lines. T conference room is available at all times for clubs or groups desirous of studying art subjects or the Museum collections. Lectures and Museum talks are given on request by members of the staff. Through exte sion exhibits in the branch libraries and schools of the city the Museum reaches many who would not oth wise be touched.

The Children's Museum is becoming an important factor of the Museum's activities. An appeal made to the child mind by exhibits of suitable works of art, including two series of ethnological models a natural history groups. Drawing materials are placed at the disposal of the children and sympathet assistance is given them by the attendants, every effort being made to create an interest in and an appr ciation of beauty and art. Classes of sixth, seventh and eighth grade public school children work in the M seum each day under a supervisor employed by the Board of Education. Classes from the public and p vate schools and from the colleges come for general tours of the galleries and for correlative study in co nection with their work in literature, history, &c.

WORCESTER ART MUSEUM.

(By the Director, Raymond Wyer.)

THE Worcester, Mass., Art Museum was founded and incorporated in 1896. It was a gift from t late Mr. Stephen Salisbury who left his entire estate for its maintenance and the formation of a permane collection. One of the significant collections of early Italian paintings and sculpture in the country h been assembled as well as important examples of painting and sculpture of other schools and periods. Co lections of textiles, furniture, ceramics, woodwork, silver and bronzes are being made. Also of spec note are the Bancroft Collection of Japanese Prints and the Goodspeed Collection of Engravings by Amer can artists. Another important feature is the Educational Department which gives courses of instru tion in color and design to school children and lectures on the same subject to adults. It has an importa art library. A series of free concerts are given each year to the public as well as a number of transient e hibitions. There is a Worcester Art Museum Arts and Crafts school in a separate building.

BOSTON MUSEUM OF FINE ARTS.

The Museum of Fine Arts, Boston, was incorporated February 4, 1870. The first section of the Museum lding in Copley Square was dedicated July 3, 1876, and the next day it was opened to the public. The ginal building was twice enlarged. The first section of the present building on Huntington Avenue was ned November 15, 1909. The total cost of land, building, and installation was $2,900,000. The second ion of the proposed completed building, the Robert Dawson Evans Galleries for Paintings, the gift of s. Evans, was opened February 3, 1915. It cost $1,000,000. The annual running expenses are about 0,000. The Museum receives no city or State aid, its funds for running expenses and for purchases ng derived entirely from private gifts and bequests. Admission is free whenever the Museum is open: A. M. to 5 P. M. week days (Nov. 1 to Mch. 1, 4 P. M.), 1 P. M. to 5 P. M. Sundays.

The Museum possesses collections illustrating the art of Ancient Egypt, Greece, and Rome, the art of diaeval, Renaissance and modern Europe, American art, and the art of Asia. Its collection of Egyp- and Greek sculpture, and Greek vases and terra cottas is the finest in this country; its collection of art of China and Japan is unrivaled; its collection of the art of India is the only one in this country; its collection of paintings and drawings from India is superior even to the one in the British Museum; textiles, numbering over 7,000 pieces, are recognized as the best comprehensive representative collec- in this country; the paintings, of which over 700 are exhibited, include, besides examples of the old sters, some of the most famous and most popular Colonial and contemporary American pictures.

FIELD MUSEUM OF NATURAL HISTORY, CHICAGO.

FIELD Museum of Natural History, established 1893, at the close of the World's Columbian Exposition 893, removed June 1, 1920, to its new building in Grant Park. The founding of a scientific institu- of this character in Chicago was made possible by a gift of $1,000,000 by Marshall Field, whose name institution bears, and who on his death January 6, 1906, bequeathed a further $8,000,000, of which 00,000 was for the erection of a permanent building, and $4,000,000 for endowment. The sum of 00,000 has been contributed by others, and there is an annual income from other sources than endow- t of approximately $50,000.

The nucleus of the exhibition material was gathered by gift and purchase at the World's Columbian osition. Several departments created at the organization have been abandoned, until, after a lapse of nty-seven years and expenditure of over $7,000,000, the Museum is now divided into five departments: hropology, botany, geology, zoology, and the N. W. Harris Public School Extension. Many expeditions the purpose of obtaining study, exhibition, and exchange material and data have been dispatched to arts of the world. The results have been published by the Museum from time to time. It has a work- library of 74,000 titles, an extensive exchange system, fully equipped departmental laboratories, an her- um of 560,000 sheets, study collections of mammals, birds, fishes, reptiles and insects reaching many isand specimens, a large taxidermy section, a printing shop, illustration studio, assaying and lapidary ns, &c. In North American, Philippine, Chinese and Tibetan ethnology, in meteorites, in the world's eralogy, in economic botany, the Museum is particularly prominent, while its series of mounted mam- s and birds and plant reproduction furnish examples of advanced museum practice. The Institution pen to the public on all days except Christmas and Thanksgiving. A small admission fee is charged pt on Thursday, Saturday, and Sunday, when it is free to all. Students, scholars and teachers are itted free at all times.

The Museum is incorporated under Illinois State law, and the administrative control rests in a board wenty-one trustees. The building is 750 feet by 350 feet, but with the exterior outer lines, including ances and terrace, the structure covers about eleven acres of ground. Pres., Stanley Field; Sec. and , D. C. Davies.

CORCORAN GALLERY OF ART WASHINGTON, D. C.

The Corcoran Gallery of Art, at Washington, D. C., founded and endowed by the late William Wilson coran in 1869, solely for encouraging American genius in the fine arts, is a private corporation controlled a self-perpetuating board of nine trustees. The original home of the institution was at Pennsylvania nue and 17th Street; but in 1897 its collections were transferred to the present building, designed by st Flagg of New York, and located at New York Avenue and 17th Street, N W. The value of the ding and grounds connected therewith is $1,000,000, and the present value of the collections is esti- ed at $1,500,000. The endowment fund amounts to $1,000,000.

The collection of paintings is particularly representative of American artists. In addition the gallery examples of the French, Dutch, English, and other schools. The sculptures include casts from the que and the Renaissance, and modern works, as well as original works in marble and bronze. There over 100 original bronzes by Antoine-Louis Barye, French sculptor of animals. It is open to the public: idays, 12 M. to 4.30 P. M.; other week days, 9 A. M. to 4.30 P. M.; Sundays, 1.30 to 4.30 P. M.

THE CITY ART MUSEUM OF ST. LOUIS.

The City Art Museum of St. Louis was established in 1879, and became a municipal institution in 1907. building is in Forest Park, 160x350 feet, with 44 galleries on three floors. The collections include tings, prints, sculpture, textiles, ceramics, metal work, furniture and other objects. The modern paint- are comprehensive, by artists of America, France, Holland, Spain, England, Russia, Sweden, Belgium other countries. There is a small group of Old Masters. In the print department are etchings, engrav- and woodcuts by old and modern masters. The sculptures are chiefly examples by American artists, plemented by collections of casts from the antique and from masterpieces of the Renaissance. Among Chinese Ceramics are specimens from the Han Dynasty downward, and examples of the Sung, Ming, K'ang-Hsi periods. There are groups of Chinese paintings, bronzes, jades and other carved stones, uer, glass, textiles, &c., as well as objects illustrative of the decorative arts of ancient Greece and pt, of Japan, Korea and Persia. The Museum is open daily, except Christmas and New Year's Days, A. M. to 5 P. M. Admission free.

BUFFALO FINE ARTS ACADEMY.

The Buffalo Fine Arts Academy was organized November 11, 1862, and incorporated December 4 e year. The building occupied by the organization was a gift from Mr. John Joseph Albright. It is ite marble structure two hundred and fifty feet long (north and south) and one hundred and fifty feet (east and west). Its central feature is based on the east porch of the Erectheum, on the Acropolis at ens—perhaps the purest type of Ionic architecture. The City of Buffalo has been contributing toward support of the Institute since 1909. The permanent collection of the Academy consists of 307 paintings, engravings and etchings, and 56 sculptures, including casts. The total membership is 610. During year several special exhibitions are given; a semi-ann. art journal is published. Lectures are given. ial efforts are made to interest the public and the school children. Several foreign exhibits brought by the director, Cornelia B. Sage Quinton, and passed on to other museums after being first shown e Albright Art Gallery, have made Buffalo noted in art circles. They included: Exhibition of paintings sculpture by the Société Nouvelle of France, of which Rodin was president; exhibition of French tex- exhibition of the work (sculpture) by Constantin Meunier; collections of the French artists G. La che and M. B. de Monvel; the exhibition of American sculpture, held at Albright Art Gallery in 1916.

SMITHSONIAN INSTITUTION.

THE SMITHSONIAN INSTITUTION is legally an establishment, having as its members the President of t United States, the Vice President, the Chief Justice, and the President's Cabinet. It is governed by a Boa of Regents consisting of the Vice President, the Chief Justice, three members of the United States Sena three members of the House of Representatives, and six citizens of the United States appointed by joi resolution of Congress. The Secretary of the Smithsonian Institution is its executive officer and the direct of its activities.

The Institution at Washington, D. C., was established by statute in 1846, under the terms of the w of James Smithson, who bequeathed his fortune in 1826 to the United States to found an institution i the "increase and diffusion of knowledge among men." From the income of the fund a building, kno as the Smithsonian Building, was erected on land given by the United States. The Institution maintai a library, numbering about 300,000 volumes, which is deposited in the Library of Congress and whi consists mainly of the transactions of learned societies, and scientific periodicals. While the body of t library is deposited in the Library of Congress and accessible to all its readers, a working library is ma tained at the Institution. The Regents are empowered to accept gifts without action of Congress, furtherance of the purposes of the Institution, and to administer trusts in accord therewith.

The Institution has charge of the National Museum, the National Gallery of Art, the Internatio Exchange Service, the Bureau of American Ethnology, the National Zoological Park, the Astrophysi Observatory, and the United States Regional Bureau for the International Catalogue of Scientific Literatu

THE UNITED STATES NATIONAL MUSEUM is the depository of the national collections. It is rich the natural history, geology, paleontology, archæology and ethnology of America, and has collections American history (including large war collections illustrative of the part taken by the United States in t recent conflict), as well as many series relating to the arts and the industrial arts. It is an educatio and a research museum, and issues scientific publications. The National Gallery of Art consists of t collections of etchings and engravings of George P. Marsh, the collections of Charles L. Freer, contain paintings and etchings by Whistler, and examples of Oriental art; the Harriet Lane Johnston collecti including works of a number of the greatest English portrait painters, and the collection of William Evans, of one hundred and fifty-one paintings, representing one hundred and six American artists. T National Museum occupies two special structures, built in 1881 and 1911, containing 650,000 square feet floor space. There are 6,274 articles in the Freer collection. The amount of the annual appropriati made by Congress for the support of the museum for the fiscal year 1920 was $307,500. In addition th was appropriated for publications, binding of books, etc., $37,500. The buildings are opened to the pul 9 A. M. to 4.30 P. M. week days, and in addition the new building at the foot of Tenth Street is opened S days, 1.30 P. M. to 4.30 P. M.

BUREAU OF AMER. ETHNOLOGY, for the study of the American Indian; THE INTERNATIONAL EXCHANG for the exchange of governmental and scientific publications between the United States and foreign countr THE ASTROPHYSICAL OBSERVATORY, for the investigation of radiation phenomena; THE NATIONAL Z LOGICAL PARK at Washington, containing about 1,400 animals, and the Regional Bureau of the INT NATIONAL CATALOGUE OF SCIENTIFIC LITERATURE, for the preparation of a classified index to the curr scientific literature of the United States, are also branches of the Institution.

NATIONAL ACADEMY OF SCIENCES.

THERE are 186 living members, comprising investigators in many departments of science. The geogra ical distribution of members covers the United States, but is not considered in their election. National Academy has often been called into the service of the Government. Committees appointed accordance with acts of Congress at the request of joint commissions and committees of Congress, of President of the United States, and of the various departments of the National Government, have repo on a great variety of subjects. From time to time trust funds have been established, the incomes of wh are devoted to the award of medals or to grants for research. The will of Alexander Dallas Bache, President of the Academy, directed that the residue of his estate, after the death of his wife, should be over to the National Academy of Sciences for the "prosecution of researches in physical and natural sci by assisting experimentalists and observers." Other trusts have been left to the Academy. Several h dred thousand dollars have been disbursed by the Academy from the income of trust funds in direct of scientific research. A recent gift was that of the Carnegie Corporation, $5,000,000, for a suitable bu ing for the Academy and the National Research Council, and for the endowment of the Council.

MOUNT VERNON, TOMB OF WASHINGTON.

"MOUNT VERNON," on the west shore of the Potomac River, 12 miles below Washington, belo to the Mount Vernon Ladies' Association. It was built in 1743 by Lawrence, half brother of George Wa ington. On the death of Lawrence and of his only daughter, George Washington inherited the es and went there to live soon after his marriage in 1759. He died and was buried there in 1799. In 1 John Augustine Washington offered it for sale. A patriotic daughter of South Carolina, Ann Pan Cunningham, devoted herself to raising $200,000 required for the purpose. In 1858 the Mount Ver Ladies' Association of the Union was organized, with Miss Cunningham as Regent, and Vice Regents re senting 12 States. Contributions were solicited and popular support was enlisted. The full sum in hand before the end of 1859, and in 1860 Mount Vernon became the property of the association. further fund was provided for permanent care and maintenance. Portions of the original estate that been sold have been acquired again; buildings which had fallen into ruin have been restored; the deer p under the hill has been restocked; the mansion has been repaired; many articles of furniture and ad ment have been restored to the several rooms; numbers of valuable relics and mementoes of George Martha Washington and of their time have been deposited here.

THE CINCINNATI MUSEUM OF ART.

(By the Director, J. H. Gest.)

THE Cincinnati Museum Association, organized in 1880, and incorporated in 1881, gives exhibiti during the year, and has collections of modern American art which include the pictures, sculpture and e ings of Frank Duveneck; paintings, studies, drawings and etchings by Robert Blum; as well as a represe tion of the other leading American painters and sculptors; and a considerable number of modern Fre paintings. Gathering of casts of Greek sculpture and of carved ivory from the Roman to the Renaiss period is installed in the Schmiddapp Building, and there is a large group of American archaeology. decorative arts are represented, the department of metal work including, besides the Elkington reproc tions, a group of original armor and the Conner collection of original silver. The museum holds also Doane collection of musical instruments, the Longworth gathering of India shawls, and the exhibitio Rookwood pottery, the Cincinnati art industry with which the museum and its school, the Art Acad of Cincinnati, are closely connected. There is a reference library.

THE FOGG ART MUSEUM, AT HARVARD UNIVERSITY.

THE William Hayes Fogg Art Museum was founded by Mrs. Elizabeth Fogg of New York in memory f her husband whose name it bears. Mrs. Fogg bequeathed for this purpose $220,000, of which $150,000 as expended on the fireproof building, completed in 1895, in the College Yard. The building is two stories igh with a lecture room. Admission to the Museum is free. The hours of opening are: week-days, 9 A. I. to 5 P. M.; Sundays during the college year, 12 M. to 5 P. M. The Museum is closed on legal holays and on Saturday afternoons during the summer vacation of the University.

The collections include original works of ancient sculpture, among them a marble statue of Meleager, y Scopas; moulds and fragments of Arretine pottery; Greek vases, coins and figurines; a series of Gandara sculptures; Oriental works of art, including Chinese, Japanese and Thibetan paintings, Persian miniatures and calligraphy, pottery, jade and bronze; textiles; a few American paintings, among them works by argent, Winslow Homer and Dodge Macknight; about one hundred Byzantine, Italian, Spanish, Flemish, nd German paintings of the fourteenth, fifteenth, and sixteenth centuries; original drawings and water olor drawings by masters of the French, Italian, Northern, and English schools; and a large collection f prints, chiefly the work of the German and Italian wood and metal engravers and etchers. The Museum so has a library and a collection of photographs and slides.

THE SEMITIC AND GERMANIC MUSEUMS OF HARVARD UNIVERSITY.

The Semitic Museum at Harvard University was founded by Jacob H. Schiff, Esquire, in 1889. The bjects aimed at have been to aid the regular instruction given in the departments; to furnish the means f research; to illustrate the manners, customs, and history of the Semitic peoples; and thus to show, s far as may be, what the Semites have contributed to civilization. The Museum building on Divinty Avenue, Cambridge, completed in 1902, is likewise the gift of Mr. Schiff.

The object of the Germanic Museum is to illustrate by means of plaster casts and other kinds of production the outward aspect of the development of Germanic Culture. The new Museum building, rected in 1916 at the corner of Kirkland Street and Divinity Avenue, Cambridge, is called, in honor of s donor, Adolphus Busch Hall.

THE PEABODY MUSEUM OF HARVARD UNIVERSITY.

The Peabody Museum of American Archaeology and Ethnology of Harvard University was founded y George Peabody in 1866. Its purpose was the forming and preserving of collections of antiquities and bjects relating (1) to the native people of the American continent, and (2) to the various primitive peoes of the world in general. The collections are housed in the Peabody Museum building of five stories, nich forms the southern wing of the University Museum structure. The five stories have more than 3,000 square feet of floor space for exhibition purposes, and about 18,000 square feet for offices, laboraories and storage.

The collections relating to prehistoric American tribes have been brought together largely by explorions under the auspices of the Museum, those relating to Middle America being unusually complete. In ne halls devoted to the Mayan region are grouped the reproductions of the great stone stelae and altars hich adorn the plazas and stand before the ruined temples of the great Maya cities. Collections relatg to historic American tribes contain rare objects obtained by well-known early explorers.

The material relating to prehistoric Europe contains collections by Gabriel de Mortillet, Lartet and hristy, and Clement, the pioneer archaeologists of the century just past. The primitive people of Oceania e represented, also both the historic and prehistoric tribes of Africa. The osteological collections con- in examples of skeletal remains from nearly all sections of the world.

The laboratories of the Museum are open (under proper restrictions) to all specialists and students anthropology. The collections are also made use of by many of the institutions of higher education in ntral New England, in connection with the study of the origin and development of design, architecture, nd the various minor arts, as well as of mankind in general. The publications of the Museum consist Papers, Memoirs, Annual Reports, and special publications.

BROOKS MEMORIAL ART GALLERY, MEMPHIS, TENN.

THE Brooks Memorial Art Gallery, a gift to Memphis by Mrs. Samuel Hamilton Brooks, in memory her husband, was dedicated May 25, 1916. It is of pure Grecian architecture, of Georgian marble, costg $115,000. Situated in Overton Park, it is under the supervision of the Park Commission, one of which ody is chairman of the Art Gallery.

The extension work in the schools is one of the important activities of the Gallery, and is supported y the Memphis Art Association. There is an annual exhibit of local artists' work and students from the hools and studios, every spring. Prizes are given by the Art Association, including one for the best essay y any one from the English classes. The Junior Art Association is the centre of school interest. Several the schools have already begun to buy good pictures. There are also garden clubs, etc. Each school as a branch of the Junior Art Association with its own officers and plan of work. There are three joint eetings a year, the chairman of which makes a report to the Senior Art Association, thereby forming circle of work around the Art Gallery. At stated times lecturers are brought to the city.

TELFAIR ACADEMY OF ARTS AND SCIENCES SAVANNAH, GA.

FOUNDED 1875 under will of Mary Telfair (daughter of Edward Telfair, revolutionary patriot, signer the Articles of Confederation, and early Governor of Georgia), and last of her name. She devised to a rustee the Telfair residence and contents, and an endowment of $100,000. By additions and alterations, he residence was converted into an art gallery, containing: (1) Specimens of Colonial furniture and furshings of the Telfair family, displayed in the dining room, which is unchanged; (2), Old books and manuripts found in the residence; (3), a collection of casts of classical statues; (4), about seventy modern paintgs by artists of America, England France, Germany, Holland, Belgium, and Italy. Open seven days week; no pay days. Gives miscellaneous art exhibitions, chiefly from American Federation of Arts, exbitions of individual painters and etchers, and lectures.

ISAAC DELGADO MUSEUM OF ART, NEW ORLEANS.

THE Isaac Delgado Museum of Art was dedicated on December 16, 1911. The building was the gift Isaac Delgado to the City of New Orleans, and is maintained by the city. The Museum is free to the ublic; except Fridays, 25 cts. The Curator, C. W. Boyle. It is open on Sundays, but closed every onday. Mr. Delgado was born in 1839, at Kingston, Jamaica, and came to New Orleans when a young an, and became associated with his uncle, Samuel Delgado, in the sugar and molasses business. He died nuary 4, 1912. Permanent collection includes the Chapman H. Hyams collection of paintings and statary; the Morgan Whitney collection of jade and other hard stones; the Alvin Howard collection of Etrus- n glassware and Greek pottery; the B. M. Harrod collection of paintings and old silverware; the John . Agar collection of paintings, bronzes and ceramics, and the Eugene Lacosst collection of bronzes and ramics.

Canada and Newfoundland—dailies, 129; weeklies, 969; total of all kinds, 1,432.

Aggregate daily circulation in U. S. and Canada—morning papers, 12,000,000; evening pap 19,000,000; Sunday papers, 15,000,000.

THE PRINCIPAL LANGUAGES OF THE WORLD.

THERE are said to be 3,424 spoken languages or dialects in the world, distributed as follows: Amer 1,624; Asia, 937; Europe, 587; Africa, 276.

The English language is spoken by more than 150,000,000 of people.

German by more than 120,000,000 of people.
Russian " " " 90,000,000 " "
French " " " 60,000,000 " "
Spanish by more than 55,000,000 of people
Italian " " " 40,000,000 " "
Portuguese " " " 30,000,000 " "

Although the war has added some few words to the English language, the number is less than 10,0 The English language contains approximately 700,000 words. Of this total nearly one-half consists scientific terminology seldom met outside of text-books and of archaic, obsolescent or obsolete terms.

Various estimates of the sources of English words have been made at different times. On the b of the Lord's Prayer, George Hickes calculated that nine-tenths of our words were of Saxon origin. Sha Turner's estimate was that the Norman were to the Saxon as 4 to 6. Trench computed 60 per cent. Sax 30 per cent. Latin, including those received through French; 5 per cent. Greek, and 5 per cent. other sour Prof. W. W. Skeat in the recently published fourth edition of his Dictionary, which contains approximat 20,000 words, shows the following sources:

Anglo-Saxon and English	3,681
Low German	126
Dutch	207
Scandinavian	693
German	333
French from Low German	54
" " Dutch or Middle Dutch	45
" " Scandinavian	63

African languages	
American	1
Hybrid	6
Unknown	
Total	19,1

As regards the number of words in the principal other languages no estimate of any practical va has been made in recent years, but existing dictionaries show the following facts:

The vocabulary of the New Standard Dictionary of the English Language aggregates approximat 450,000 words. If the dead words of our speech be added, the total, as shown by the Oxford Histori Dictionary, would reach 700,000 words for the English tongue, living and dead.

The German word-book (Kürschner's Universal-Konversations-Lexikon) contains not more th 300,000 words, including personal names.

Grimm's Dictionary of the German Language contains approximately 150,000 words; Littre's D tionary of the French Language, 210,000 words; Dahl's Dictionary of the Russian Language, 140,000 wor Carlos de Ochoa's Dictionary of the Spanish Language, 120,000 words; Petrocchi's Dictionary of the Itali Language, 140,000 words.

This table was prepared by Dr. Frank H. Vizetelly, Managing Editor of the Standard Dictionar

Esperanto, an "international language," was invented in the last century by a Russian, Dr. L. L. Z menhoff of Warsaw, Poland. The first book in Esperanto was published in 1887.

Ro, a so-called "universal language," was invented by the Rev. Edward P. Foster of Marietta, Oh The first publication, an eight-page outline, was issued in 1906.

HAS MAN SEVEN SENSES INSTEAD OF FIVE?

Two newly recognized senses in addition to sight, hearing, taste, smell and touch were claimed human beings by Dr. Glenn S. Moore of Chicago in an address to the eye, ear, nose and throat section the National Osteopathic Convention at Cleveland, O., Ju y 25, 1921.

The new senses are "muscle sense," by means of which man automatically co-ordinates brain a muscle, and "kinetic-static sense" in the semi-circular canals of the internal ear. All seven senses worki in unison, says Dr. Moore, maintain the body's perfect equilibrium.

THE LARGER PUBLIC LIBRARIES IN THE UNITED STATES.

(Only those with 40,000 volumes or over.)

THE figures denote the number of bound volumes. School and college and museum libraries are not included.

WYOMING—Cheyenne (State), 60,000.

CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING.

DURING the fifteen years of its existence the Carnegie Foundation has distributed (these data are from the annual report of April 9, 1921) $7,964,399 in retiring allowances and pensions to 909 persons. Of this sum $625,000 has been paid to former teachers of Harvard, $548,000 to former teachers of Yale, and $464,000 to former teachers of Columbia University. Sixteen other universities have each received between one and two hundred thousand dollars each. The remainder has gone to eighty different institutions. There are now operative 356 retiring allowances and 199 widows' pensions, fifty-seven of which were granted during the last year, entailing an annual expenditure of $870,670. The average retiring allowance paid is $1,568.

The total resources of the Carnegie Foundation now amount to $24,628,000, of which $15,192,000 belong to the permanent general endowment, $7,571,000 to a reserve fund to be spent in the retirement, during the next sixty years, of teachers now in associated institutions, $1,250,000 to the endowment of the Division of Educational Enquiry, and $390,000 to a reserve fund to be expended in aiding universities and colleges to adopt the new plan of contractual annuities.

The Teachers' Insurance and Annuity Association of America, which was established by the foundation through a gift of $1,000,000 to provide insurance and annuity protection for college teachers without overhead charges, has written 653 insurance policies covering $3,356,747 of insurance and 554 annuity contracts providing $624,398 annual income at retirement.

SUMMARY OF PUBLIC SCHOOL WORK IN UNITED STATES.

Financial loss due to irregular attendance is estimated on the basis of each State's total expenditur for public schools, compared with time lost, measured by vacant seats.

Enrolment (1890) 12,722,581; (1900) 15,503,110; (1910) 17,813,852.

Expenditures on public school libraries in the year ended June 30, 1919, totalled $1,292,725, of whic States contributed $1,130,054. In New York State the expenditures were $155,745 by the State, and $38,754 from other sources. The next largest contributor was California, $94,179, and $5,286 from othe sources.
